Trends in Dell's PC business put the transformation at risk

Dell remains largely a PC business

Two thirds of Dell's revenue is driven by PCs

1

Support and Deployment services, which are largely PC-driven, represent a majority of consolidated operating income

Cash flow that has fueled Enterprise acquisitions is deteriorating

PC business is in secular decline

PC unit forecasts revised downward and sector valuations declining

Dell does not have a meaningful tablet business and lacks a smartphone offering

Transition to enterprise is risky, expensive and a multi-year process

Dell has completed \$13bn of acquisitions

Product and sales force integration remains a work in progress

Growth of Cloud represents a substantial threat

Proposed transaction shifts all business risks to the buyer

Returns for Dell's acquisition program remain uncertain  
Significant future integration and investment still required

5

Over \$13bn spent on acquisitions since FY08 to transform Dell into a solutions-oriented business

Sales force integration benefits and cross-selling synergies taking longer to achieve

A number of acquisitions have required additional investments to reposition for growth or new business opportunities

Current returns are lagging the 15% IRR target by the Company due, in part, to required additional investments

As the environment continues to evolve rapidly, additional investments and acquisitions are likely to be required to complete the transformation
