Novartis expands cancer immunotherapy research program with acquisition of CoStim

- *Acquisition adds novel immune modulating targets and technology to accelerate Novartis cancer immunotherapy program*
- *Novartis and University of Pennsylvania CAR immunotherapy research combined with CoStim targets and technology strengthens Novartis position in cancer immunotherapy discovery*

Basel, February 17, 2014 Novartis announced today that it is broadening its cancer immunotherapy research program with the acquisition of CoStim Pharmaceuticals Inc., a Cambridge, MA-based, privately held biotechnology company focused on harnessing the immune system to eliminate immune-blocking signals from cancer.

Increasing evidence points to the role of the immune system in controlling cancer and to opportunities for creating effective oncology therapies for cancer patients by stimulating a targeted immune response. Already leading in cancer immunotherapy, with investigative chimeric antigen receptor (CAR) technology being developed in collaboration with the University of Pennsylvania, with this acquisition Novartis is adding late discovery stage immunotherapy programs directed to several targets, including PD-1. These medicines could benefit patients by circumventing cancer's ability to develop resistance against current single drugs.

Therapy for many types of cancers are expected to increasingly rely upon rational combinations of agents, said Dr. Mark Fishman, President of the Novartis Institutes for BioMedical Research. Immunotherapy agents provide additional arrows in our quiver for such combinations. They complement our extensive portfolio of drugs that hit genetically-defined cancer-causing pathways, and also may be relevant to expansion of CAR therapies.

Financial terms are not disclosed.

Disclaimer

Edgar Filing: NOVARTIS AG - Form 6-K

The foregoing release contains forward-looking statements that can be identified by words such as to accelerate, opportunities, could, expected, or similar terms, or by express or implied discussions regarding the potential development and commercialization of cancer immunotherapies, or regarding potential future revenues from such immunotherapies. You should not place undue reliance on these statements. Such forward-looking statements are based on the current beliefs and expectations of management regarding future events, and are subject to significant known and unknown risks and uncertainties. Should one or more of these risks or uncertainties materialize, or should underlying assumptions prove incorrect, actual results may vary materially from those set forth in the forward-looking statements. There can be no guarantee that any such cancer immunotherapies will ever be developed and commercialized, or that such immunotherapies will be commercialized at any particular time. Nor can there be any guarantee that any such immunotherapies will ever be commercially successful. In

particular, management's expectations regarding cancer immunotherapies could be affected by, among other things, the uncertainties inherent in research and development, including unexpected pre-clinical and clinical trial results and additional analysis of existing data; unexpected regulatory actions or delays or government regulation generally; disruptions from the integration of CoStim making it more difficult to maintain business and operational relationships, and relationships with key employees; the company's ability to obtain or maintain proprietary intellectual property protection; general economic and industry conditions; global trends toward health care cost containment, including ongoing pricing pressures; unexpected manufacturing issues, and other risks and factors referred to in Novartis AG's current Form 20-F on file with the US Securities and Exchange Commission. Novartis is providing the information in this press release as of this date and does not undertake any obligation to update any forward-looking statements contained in this press release as a result of new information, future events or otherwise.

About Novartis

Novartis provides innovative healthcare solutions that address the evolving needs of patients and societies. Headquartered in Basel, Switzerland, Novartis offers a diversified portfolio to best meet these needs: innovative medicines, eye care, cost-saving generic pharmaceuticals, preventive vaccines and diagnostic tools, over-the-counter and animal health products. Novartis is the only global company with leading positions in these areas. In 2013, the Group achieved net sales of USD 57.9 billion, while R&D throughout the Group amounted to approximately USD 9.9 billion (USD 9.6 billion excluding impairment and amortization charges). Novartis Group companies employ approximately 136,000 full-time-equivalent associates and operate in more than 140 countries around the world.
