Notes to Consolidated Financial Statements (Unaudited) America's Car-Mart, Inc.

A – Organization and Business

America's Car-Mart, Inc., a Texas corporation (the "Company"), is the largest publicly held automotive retailer in the United States focused exclusively on the "Integrated Auto Sales and Finance" segment of the used car market. References to the Company typically include the Company's consolidated subsidiaries. The Company's operations are principally conducted through its two operating subsidiaries, America's Car Mart, Inc., an Arkansas corporation ("Car-Mart of Arkansas"), and Colonial Auto Finance, Inc., an Arkansas corporation ("Colonial"). Collectively, Car-Mart of Arkansas and Colonial are referred to herein as "Car-Mart." The Company primarily sells older model used vehicles and provides financing for substantially all of its customers. Many of the Company's customers have limited financial resources and would not qualify for conventional financing as a result of limited credit histories or past credit problems. As of January 31, 2012, the Company operated 111 dealerships located primarily in small cities throughout the South-Central United States.

B – Summary of Significant Accounting Policies

General

The accompanying condensed consolidated balance sheet as of April 30, 2011, which has been derived from audited financial statements, and the unaudited interim condensed financial statements as of January 31, 2012 and 2011, have been prepared in accordance with generally accepted accounting principles for interim financial information and in accordance with the instructions to Form 10-Q in Article 10 of Regulation S-X. Accordingly, they do not include all of the information and footnotes required by accounting principles generally accepted in the United States of America for complete financial statements. In the opinion of management, all adjustments (consisting of normal recurring accruals) considered necessary for a fair presentation have been included. Operating results for the three months and nine months ended January 31, 2012 are not necessarily indicative of the results that may be expected for the year ending April 30, 2012. For further information, refer to the consolidated financial statements and footnotes thereto included in the Company's annual report on Form 10-K for the year ended April 30, 2011.

Principles of Consolidation

The consolidated financial statements include the accounts of the Company and its subsidiaries. All intercompany accounts and transactions have been eliminated.

Segment Information

Each dealership is an operating segment with its results regularly reviewed by the Company's chief operating decision maker in an effort to make decisions about resources to be allocated to the segment and to assess its performance. Individual dealerships meet the aggregation criteria under the current accounting guidance. The Company operates in the Integrated Auto Sales and Finance segment of the used car market. In this industry, the nature of the sale and the financing of the transaction, financing processes, the type of customer and the methods used to distribute the Company's products and services, including the actual servicing of the contracts as well as the regulatory environment in which the Company operates, all have similar characteristics. Each of our individual dealerships is similar in nature and only engages in the selling and financing of used vehicles. All individual dealerships have similar operating characteristics. As such, individual dealerships have been aggregated into one reportable segment.

Use of Estimates

The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements, and the reported amounts of revenues and expenses during the period. Actual results could differ from those estimates.

Concentration of Risk

The Company provides financing in connection with the sale of substantially all of its vehicles. These sales are made primarily to customers residing in Alabama, Arkansas, Oklahoma, Tennessee, Texas, Kentucky and Missouri, with approximately 44% of revenues resulting from sales to Arkansas customers. Periodically, the Company maintains cash in financial institutions in excess of the amounts insured by the federal government.

Restrictions on Distributions/Dividends

The Company's revolving credit facilities generally limit distributions by the Company to its shareholders in order to repurchase the Company's common stock, to 75% of consolidated net income measured on a trailing twelve month basis as well as the maintenance of certain financial ratios, as defined. Thus, the Company is limited in the amount of dividends or other distributions it can make to its shareholders without the consent of the Company's lenders. In May 2011, the Company entered into an amendment to its loan and security agreement that amended the definition of "permitted distributions" to exclude the first \$20.0 million in stock repurchases by the Company from its shareholders for the fiscal year ending April 30, 2012 from the limitations placed on distributions that could be made in connection with stock repurchases.

Cash Equivalents

The Company considers all highly liquid debt instruments purchased with original maturities of three months or less to be cash equivalents.

Finance Receivables, Repossessions and Charge-offs and Allowance for Credit Losses

The Company originates installment sale contracts from the sale of used vehicles at its dealerships. These installment sale contracts carry interest rates ranging from 5.5% to 19% using the simple effective interest method including any deferred fees. Contract origination costs are not significant. The installment sale contracts are not pre-computed contracts whereby buyers are obligated to pay back principal plus the full amount of interest that will accrue over the entire term of the contract. Finance receivables are collateralized by vehicles sold and consist of contractually scheduled payments from installment contracts net of unearned finance charges and an allowance for credit losses. Unearned finance charges represent the balance of interest receivable to be earned over the entire term of the related installment contract, less the earned amount (\$1.6 million at January 31, 2012 and \$1.1 million at April 30, 2011), and as such, has been reflected as a reduction to the gross contract amount in arriving at the principal balance in finance receivables. An account is considered delinquent when a contractually scheduled payment has not been received by the scheduled payment date. While the Company does not formally place contracts on nonaccrual status, the immaterial amount of interest that may accrue after an account becomes delinquent up until the point of resolution via repossession or write-off, is reserved for against the accrued interest on the Consolidated Balance Sheets. Delinquent contracts are addressed and either made current by the customer, which is the case in most situations, or the vehicle is repossessed or written off, if the collateral cannot be recovered quickly. Customer payments are set to match their pay-day with over 80% of payments due on either a weekly or bi-weekly basis. The frequency of the payment due dates combined with the declining value of collateral lead to prompt resolutions on problem accounts. Accounts are delinquent when the customer is one day or more behind on their contractual payments. At January 31, 2012 and 2011, respectively, 4.7% and 4.6% of the Company's finance receivable balances were 30 days or more past due.

Substantially all of the Company's automobile contracts involve contracts made to individuals with impaired or limited credit histories, or higher debt-to-income ratios than permitted by traditional lenders. Contracts made with buyers who are restricted in their ability to obtain financing from traditional lenders generally entail a higher risk of delinquency, default and repossession, and higher losses than contracts made with buyers with better credit.

The Company works very hard to keep its delinquency percentages low, and not to repossess vehicles. Accounts one day late are sent a notice in the mail. Accounts three days late are contacted by telephone. Notes from each telephone contact are electronically maintained in the Company's computer system. If a customer becomes severely delinquent in his or her payments, and management determines that timely collection of future payments is not probable, the Company will take steps to repossess the vehicle. The Company attempts to resolve payment delinquencies amicably prior to repossessing a vehicle. Periodically, the Company enters into contract modifications with its customers to

extend the payment terms. The Company only enters into a contract modification or extension if it believes such action will increase the amount of monies the Company will ultimately realize on the customer's account. At the time of modification, the Company expects to collect amounts due including accrued interest at the contractual interest rate for the period of delay. Other than the extension of additional time, concessions are not granted to customers at the time of modifications. Modifications are minor and are made for pay-day changes, minor vehicle repairs and other reasons. For those vehicles that are repossessed, the majority are returned or surrendered by the customer on a voluntary basis. Other repossessions are performed by Company personnel or third party repossession agents. Depending on the condition of a repossessed vehicle, it will most likely be sold for cash on a wholesale basis primarily through physical and/or on-line auctions but a limited number could potentially be resold on a retail basis through a Company dealership.

The Company takes steps to repossess a vehicle when the customer becomes delinquent in his or her payments, and management determines that timely collection of future payments is not probable. Accounts are charged-off after the expiration of a statutory notice period for repossessed accounts, or when management determines that the timely collection of future payments is not probable for accounts where the Company has been unable to repossess the vehicle. For accounts with respect to which the vehicle was repossessed, the fair value of the repossessed vehicle is charged as a reduction of the gross finance receivable balance charged-off. On average, accounts are approximately 63 days past due at the time of charge-off. For previously charged-off accounts that are subsequently recovered, the amount of such recovery is credited to the allowance for credit losses.

The Company maintains an allowance for credit losses on an aggregate basis, as opposed to a contract-by-contract basis, at an amount it considers sufficient to cover estimated losses in the collection of its finance receivables. The Company accrues an estimated loss as it is probable that the entire amount will not be collected and the amount of the loss can be reasonably estimated in the aggregate. The allowance for credit losses is based primarily upon historical credit loss experience, with consideration given to recent credit loss trends and changes in contract characteristics (i.e., average amount financed and term), delinquency levels, collateral values, economic conditions and underwriting and collection practices. The allowance for credit losses is reviewed at least quarterly by management with any changes reflected in current operations. The calculation of the allowance for credit losses uses the following primary factors:

- The number of units repossessed or charged-off as a percentage of total units financed over specific historical periods of time.
- The average net repossession and charge-off loss per unit during the last eighteen months, segregated by the number of months since the contract origination date, and adjusted for the expected future average net charge-off loss per unit. About 50% of the charge-offs that will ultimately occur in the portfolio are expected to occur within 10-11 months following the balance sheet date. The average age of an account at charge-off date is 11 months.
- The timing of repossession and charge-off losses relative to the date of sale (i.e., how long it takes for a repossession or charge-off to occur) for repossessions and charge-offs occurring during the last eighteen months.

A point estimate is produced by this analysis which is then supplemented by any positive or negative subjective factors to arrive at an overall reserve amount that management considers to be a reasonable estimate of incurred losses that will be realized via actual charge-offs in the future. Although it is at least reasonably possible that events or circumstances could occur in the future that are not presently foreseen which could cause actual credit losses to be materially different from the recorded allowance for credit losses, the Company believes that it has given appropriate consideration to all relevant factors and has made reasonable assumptions in determining the allowance for credit losses. Periods of economic downturn do not necessarily lead to increased credit losses because the Company provides basic affordable transportation to customers that, for the most part, do not have access to public transportation. The effectiveness of the execution of internal policies and procedures within the collections area has historically had a more significant effect on collection results than macro-economic issues.

The Company offers retail customers in most states the option of purchasing a payment protection plan product as an add-on to the installment sale contract. This product contractually obligates the Company to cancel the remaining principal outstanding for any contract where the retail customer has totaled the vehicle, as defined, or the vehicle has been stolen. The Company periodically evaluates anticipated losses to ensure that if anticipated losses exceed deferred payment protection plan revenues, an additional liability is recorded for such difference. No such liability was required at January 31, 2012 or April 30, 2011.

Inventory

Inventory consists of used vehicles and is valued at the lower of cost or market on a specific identification basis. Vehicle reconditioning costs are capitalized as a component of inventory. Repossessed vehicles are recorded at fair value, which approximates wholesale value. The cost of used vehicles sold is determined using the specific identification method.

Goodwill

Goodwill reflects the excess of purchase price over the fair value of specifically identified net assets purchased. Goodwill and intangible assets deemed to have indefinite lives are not amortized but are subject to annual impairment tests at the Company's year end. The impairment tests are based on the comparison of the fair value of the

reporting unit to the carrying value of such unit. If the fair value of the reporting unit falls below its carrying value, the Company performs the second step of the two-step goodwill impairment process to determine the amount, if any, that the goodwill is impaired. The second step involves determining the fair value of the identifiable assets and liabilities and the implied goodwill. The implied goodwill is compared to the carrying value of the goodwill to determine the impairment, if any. There was no impairment of goodwill during fiscal 2011, and to date, there has been none in fiscal 2012.

Property and Equipment

Property and equipment are stated at cost. Expenditures for additions, renewals and improvements are capitalized. Costs of repairs and maintenance are expensed as incurred. Leasehold improvements are amortized over the shorter of the estimated life of the improvement or the lease term. The lease term includes the primary lease term plus any extensions that are reasonably assured. Depreciation is computed principally using the straight-line method generally over the following estimated useful lives:

Furniture, fixtures and equipment	3 to 7 years
Leasehold improvements	5 to 15 years
Buildings and improvements	18 to 39 years

Property and equipment are reviewed for impairment whenever events or changes in circumstances indicate the carrying amount of an asset may not be recoverable. Recoverability of assets to be held and used is measured by a comparison of the carrying amount of an asset to future undiscounted net cash flows expected to be generated by the asset. If such assets are considered to be impaired, the impairment to be recognized is measured by the amount by which the carrying values of the impaired assets exceed the fair value of such assets. Assets to be disposed of are reported at the lower of the carrying amount or fair value less costs to sell.

Cash Overdraft

The Company's primary disbursement bank account is set up to operate with a fixed \$50,000 cash balance. As checks are presented for payment, monies are automatically drawn against cash collections for the day and, if necessary, are drawn against one of its revolving credit facilities. The cash overdraft balance principally represents outstanding checks, net of any deposits in transit that as of the balance sheet date had not yet been presented for payment.

Deferred Sales Tax

Deferred sales tax represents a sales tax liability of the Company for vehicles sold on an installment basis in the states of Alabama and Texas. Under Alabama and Texas law, for vehicles sold on an installment basis, the related sales tax is due as the payments are collected from the customer, rather than at the time of sale.

Income Taxes

Income taxes are accounted for under the liability method. Under this method, deferred tax assets and liabilities are determined based on differences between financial reporting and tax bases of assets and liabilities, and are measured using the enacted tax rates expected to apply in the years in which these temporary differences are expected to be recovered or settled. The quarterly provision for income taxes is determined using an estimated annual effective tax rate, which is based on expected annual taxable income, statutory tax rates and the Company's best estimate of nontaxable and nondeductible items of income and expense.

Occasionally, the Company is audited by taxing authorities. These audits could result in proposed assessments of additional taxes. The Company believes that its tax positions comply in all material respects with applicable tax law. However, tax law is subject to interpretation, and interpretations by taxing authorities could be different from those of the Company, which could result in the imposition of additional taxes.

The Company recognizes the financial statement benefit of a tax position only after determining that the relevant tax authority would more likely than not sustain the position following an audit. For tax positions meeting the more-likely-than-not threshold, the amount recognized in the financial statements is the largest benefit that has a greater than 50 percent likelihood of being realized upon ultimate settlement with the relevant tax authority. The

Company applies this methodology to all tax positions for which the statute of limitations remains open.

The Company is subject to income taxes in the U.S. federal jurisdiction and various state jurisdictions. Tax regulations within each jurisdiction are subject to the interpretation of the related tax laws and regulations and require significant judgment to apply. With few exceptions, the Company is no longer subject to U.S. federal, state and local income tax examinations by tax authorities for the years before fiscal 2008.

In fiscal 2010, the Internal Revenue Service (“IRS”) completed the examinations of the Company’s income tax returns for fiscal years 2008 and 2009. As a result of the examinations, the IRS has questioned whether deferred payment protection plan (“PPP”) revenue associated with the sale of certain receivables are subject to the acceleration of advance payments provision of the IRS code and whether the Company may deduct losses on the sale of the PPP receivables in excess of the income recognized on the underlying contracts. The issue is timing in nature and does not affect the overall tax provision, but affects the timing of required tax payments.

By letter dated April 2, 2010, the IRS delivered to the Company a revenue agent's report, which proposes an adjustment for the items discussed above as well as interest. The Company intends to vigorously defend its position, and on April 23, 2010, the Company filed an administrative protest with the Appeals Office of the IRS. The protest disputes the income tax changes proposed by the IRS and requests a conference with a representative of the Appeals Office. The Company has had a preliminary conference with the Appeals Office and the matter continues to be under review and discussion. If the matter is not resolved in the Appeals Office, and if the IRS intends to pursue its position, the Company fully intends to ask an appropriate court to consider the issue.

The Company's policy is to recognize accrued interest related to unrecognized tax benefits in interest expense and penalties in operating expenses. The Company had no accrued penalties or interest as of January 31, 2012 or April 30, 2011.

Revenue Recognition

Revenues are generated principally from the sale of used vehicles, which in most cases includes a service contract and a payment protection plan product, interest income and late fees earned on finance receivables. Revenues are net of taxes collected from customers and remitted to government agencies. Cost of vehicle sales include costs incurred by the Company to prepare the vehicle for sale including license and title costs, gasoline, transport services and repairs.

Revenues from the sale of used vehicles are recognized when the sales contract is signed, the customer has taken possession of the vehicle and, if applicable, financing has been approved. Revenues from the sale of service contracts are recognized ratably over the five-month service contract period. Service contract revenues are included in sales and the related expenses are included in cost of sales. Payment protection plan revenues are initially deferred and then recognized to income using the "Rule of 78's" interest method over the life of the contract so that revenues are recognized in proportion to the amount of cancellation protection provided. Payment protection plan revenues are included in sales and related losses are included in cost of sales. Interest income is recognized on all active finance receivable accounts using the simple effective interest method. Active accounts include all accounts except those that have been paid-off or charged-off.

Sales consist of the following:

(In thousands)	Three Months Ended:		Nine Months Ended:	
	January 31, 2012	2011	January 31, 2012	2011
Sales – used autos	\$82,589	\$72,593	\$250,865	\$217,710
Wholesales – third party	5,008	4,555	15,239	13,747
Service contract sales	3,500	3,034	10,039	8,980
Payment protection plan revenue	2,860	2,593	8,266	7,551
Total	\$93,957	\$82,775	\$284,409	\$247,988

Late fee revenues were approximately \$1.2 million and \$1.3 million for the nine months ended January 31, 2012 and 2011, respectively. Late fees are recognized when collected and are reflected in interest income. Finance receivables more than 90 days past due were approximately \$978,000 and \$482,000 at January 31, 2012 and 2011, respectively.

Earnings per Share

Basic earnings per share are computed by dividing net income by the average number of common shares outstanding during the period. The calculation of diluted earnings per share takes into consideration the potentially dilutive effect

of common stock equivalents, such as outstanding stock options, which if exercised or converted into common stock would then share in the earnings of the Company. In computing diluted earnings per share, the Company utilizes the treasury stock method and anti-dilutive securities are excluded.

Stock-based compensation

The Company recognizes the cost of employee services received in exchange for awards of equity instruments, such as stock options and restricted stock, based on the fair value of those awards at the date of grant over the requisite service period. The Company uses the Black Scholes option pricing model to determine the fair value of stock option awards. The Company may issue either new shares or treasury shares upon exercise of these awards. Stock-based compensation plans, related expenses and assumptions used in the Black Scholes option pricing model are more fully described in Note I.

Treasury Stock

The Company purchased 1,002,363 shares of its common stock during the first nine months of fiscal 2012 for a total cost of \$29.9 million and 691,800 shares for a total cost of \$16.5 million during the first nine months of fiscal 2011. Treasury stock may be used for issuances under the Company's stock-based compensation plans or for other general corporate purposes.

Recent Accounting Pronouncements

Occasionally, new accounting pronouncements are issued by the Financial Accounting Standards Board ("FASB") or other standard setting bodies which the Company adopts as of the specified effective date. Unless otherwise discussed, the Company believes the impact of recently issued standards which are not yet effective will not have a material impact on its consolidated financial statements upon adoption.

Goodwill. In September 2011, the FASB adopted an update regarding testing goodwill and other intangibles for impairment. The update permits an entity to first assess qualitative factors to determine whether it is more likely than not that the fair value of a reporting unit is less than its carrying amount as a basis for determining whether it is necessary to perform the two-step goodwill impairment test. This update will be effective for annual and interim goodwill impairment tests performed for fiscal years beginning after December 15, 2011. The Company expects to implement this update for its fiscal year beginning May 1, 2012. This update is not expected to have a material impact on the Company's financial statements.

C – Finance Receivables

The Company originates installment sale contracts from the sale of used vehicles at its dealerships. These installment sale contracts typically include interest rates ranging from 5.5% to 19% per annum, are collateralized by the vehicle sold and provide for payments over periods ranging from 12 to 36 months. The Company's finance receivables are defined as one segment and one class of loans, which is sub-prime consumer automobile contracts. The level of risks inherent in our financing receivable are managed as one homogeneous pool. The components of finance receivables are as follows:

(In thousands)	January 31, 2012	April 30, 2011
Gross contract amount	\$ 362,599	\$ 317,956
Less unearned finance charges	(40,246)	(35,478)
Principal balance	322,353	282,478
Less allowance for credit losses	(68,708)	(60,173)
Finance receivables, net	\$ 253,645	\$ 222,305

Changes in the finance receivables, net for the nine months ended January 31, 2012 and 2011 are as follows:

(In thousands)	Nine Months Ended January 31,	
	2012	2011
Balance at beginning of period	\$ 222,305	\$ 205,423
Finance receivable originations	263,539	227,951
Finance receivable collections	(140,084)	(133,898)
Provision for credit losses	(62,056)	(52,994)
Losses on claims for payment protection plan	(4,353)	(3,625)
Inventory acquired in repossession and payment protection plan claims	(25,706)	(21,088)
Balance at end of period	\$ 253,645	\$ 221,769

Changes in the finance receivables allowance for credit losses for the nine months ended January 31, 2012 and 2011 are as follows:

(In thousands)	Nine Months Ended January 31,	
	2012	2011
Balance at beginning of period	\$ 60,173	\$ 55,628
Provision for credit losses	62,056	52,994
Charge-offs, net of recovered collateral	(53,521)	(48,539)
Balance at end of period	\$ 68,708	\$ 60,083

The factors which influenced management's judgment in determining the amount of the additions to the allowance charged to provision for credit losses were:

The level of actual charge-offs, net of recovered collateral is the most important factor in determining the charges to the provision for credit losses. This is due to the fact that once a contract becomes delinquent the account is either made current by the customer, the vehicle is repossessed or the account is written off, if the collateral cannot be recovered. Net charge-offs for the first nine months of fiscal 2012 were higher than the prior year period, primarily due to higher sales volumes. Net charge-offs as a percentage of average finance receivables remained constant at 17.7% for the first nine months ended January 31, 2012 compared to the same period in the prior year. Higher sales volumes also had the effect of higher additions to the allowance charged to the provision for the first nine months of fiscal 2012.

Collections and delinquency levels have a significant effect on additions to the allowance and are reviewed frequently in determining the additions to the allowance charged to the provision. For the first nine months of fiscal 2012, collections as a percentage of average finance receivables decreased to 46.3% compared to 48.8% for the same period of fiscal 2011. The decrease in the collections as a percentage of average finance receivables compared to the same period of the prior year can partially be attributed to the higher average portfolio interest rate and slightly longer average contract term, together with an increase in contract modifications as well as the fact that the overall portfolio is slightly younger than last year.

Macro-economic factors as well as proper execution of operational policies and procedures can have an effect on additions charged to the provision. Higher unemployment levels, higher gasoline prices and higher prices for staple

items can potentially have a significant effect. While overall macro-economic factors were still unfavorable during the first nine months of 2012, the Company is focused on continuing operational improvements within the collections area. Market share gains and specific stimulus funds directly benefitting many of the Company's customers were also positive as related to credit results.

Credit quality information for finance receivables is as follows:

(Dollars in thousands)	January 31, 2012		April 30, 2011		January 31, 2011	
	Principal Balance	Percent of Portfolio	Principal Balance	Percent of Portfolio	Principal Balance	Percent of Portfolio
Current	\$249,880	77.52 %	\$ 243,266	86.12 %	\$233,729	82.93 %
3 - 29 days past due	57,227	17.75 %	30,975	10.97 %	35,296	12.52 %
30 - 60 days past due	11,096	3.44 %	6,003	2.13 %	9,873	3.50 %
61 - 90 days past due	3,172	0.98 %	2,036	0.72 %	2,472	0.88 %
> 90 days past due	978	0.30 %	198	0.07 %	482	0.17 %
Total	\$322,353	100.00 %	\$ 282,478	100.00 %	\$281,852	100.00 %

Accounts one and two days past due are considered current for this analysis, due to the varying payment dates and variation in the day of the week at each period end. Delinquencies may vary from period to period based on the average age of the portfolio, seasonality within the calendar year, the day of the week and overall economic factors. The above categories are consistent with internal operational measures used by the Company to monitor credit results. Accounts 3 days past due totaled \$17.3 million, \$1.4 million and \$6.1 million at January 31, 2012, April 30, 2011 and January 31, 2011, respectively. The current period amount included payments due on the last Saturday prior to the quarter end which primarily caused the increase in the 3-29 days past due category when compared to prior periods.

Substantially all of the Company's automobile contracts involve contracts made to individuals with impaired or limited credit histories, or higher debt-to-income ratios than permitted by traditional lenders. Contracts made with buyers who are restricted in their ability to obtain financing from traditional lenders generally entail a higher risk of delinquency, default and repossession, and higher losses than contracts made with buyers with better credit. The Company monitors contract term length, down payment percentages, and collections for credit quality indicators.

	Nine Months Ended January 31, 2012		January 31, 2011	
Principal collected as a percent of average finance receivables	46.3	%	48.8	%
Average down-payment percentage	6.2	%	6.3	%

	January 31, 2012	January 31, 2011
Average originating contract term (in months)	26.6	24.9
Portfolio weighted average contract term, including modifications (in months)	27.7	27.0

The decrease in the principal collected as a percent of average finance receivables is primarily attributed to the higher average portfolio interest rate and slightly longer average contract term, together with a slight increase in contract modifications as well as the fact that the overall portfolio is younger when compared to this time last year. Also, the timing of customer payments during the income tax refund period was negatively affected by IRS funding delays during the most recent quarter when compared to the prior year. The increases in contract term are primarily related to the increased average selling price and our efforts to keep payments affordable for our customers.

D – Property and Equipment

A summary of property and equipment is as follows:

(In thousands)	January 31, 2012	April 30, 2011
Land	\$ 6,079	\$6,079
Buildings and improvements	10,246	9,947
Furniture, fixtures and equipment	8,558	7,618
Leasehold improvements	11,768	10,063
Construction in progress	935	732
Less accumulated depreciation and amortization	(10,538)	(8,907)
	\$ 27,048	\$25,532

E – Accrued Liabilities

A summary of accrued liabilities is as follows:

(In thousands)	January 31, 2012	April 30, 2011
Compensation	\$ 3,809	\$4,203
Cash overdraft	1,370	-
Deferred service contract revenue	3,104	2,970
Deferred sales tax	1,818	1,684
Interest	215	117
Other	2,366	2,375
	\$ 12,682	\$11,349

F – Debt Facilities

A summary of revolving credit facilities is as follows:

Aggregate Amount	Interest Rate	Maturity	January 31, 2012	Balance at April 30, 2011
\$105.0 million	Prime +/- (3.0% at January 31, 2012 and April 30, 2011)	November 2013	\$ 83,873	\$ 47,539

On November 4, 2010, the Company entered into a new loan and security agreement (“Credit Facilities”) with a group of lenders providing revolving credit facilities totaling \$90 million. On October 19, 2011, the loan and security agreement was amended to increase the total revolving commitment to \$105 million. The Credit Facilities expire in November 2013. The revolving credit facilities are collateralized primarily by finance receivables and inventory of Car-Mart, are cross collateralized and contain a guarantee by the Company. Interest is payable monthly under the revolving credit facilities with tiered pricing at Libor + 2.75% or the bank’s prime rate less 0.25% with no floor. The Credit Facilities contain various reporting and performance covenants including (i) maintenance of certain financial ratios and tests, (ii) limitations on borrowings from other sources, (iii) restrictions on certain operating activities, and (iv) limitations on the payment of dividends or distributions. The Company was in compliance with the covenants at

January 31, 2012. The amount available to be drawn under the credit facilities is a function of eligible finance receivables and inventory. Based upon eligible finance receivables and inventory at January 31, 2012, the Company had additional availability of \$21 million under the revolving credit facilities.

The Company recognized \$133,000 of amortization in the first nine months of fiscal 2012 related to debt issuance costs. The amortization is reflected as interest expense in the Company's Condensed Consolidated Statement of Operations.

Interest Rate Swap Agreement

In fiscal 2011, the Company had an interest rate swap agreement (“Agreement”) with its primary lender for a notional principal amount of \$20 million. The effective date of the Agreement was May 20, 2008. The Agreement was set to mature on May 31, 2013 and provided that the Company would pay monthly interest on the notional amount at a fixed rate of 6.68% and receive monthly interest on the notional amount at a floating rate based on the bank’s prime lending rate, an initial rate of 5.00% (effective rate of 3.25% at January 31, 2011). The Company entered into this Agreement to manage a portion of its interest rate exposure by effectively converting a portion of its variable rate debt into fixed rate debt; however, due to unfavorable interest rate movements, the Company terminated the interest rate swap agreement in April 2011 for \$1.3 million. The interest rate swap agreement was not designated as a hedge by Company management; therefore, the gain (loss) of the Agreement is reported in earnings. The net loss for the Agreement reported in earnings as interest expense was \$33,000 for the nine months ended January 31, 2011. The interest on the credit facilities, the net settlements under the interest rate swap and the changes in the fair value of the agreement, were all reflected in interest expense.

G – Fair Value Measurements

The table below summarizes information about the fair value of financial instruments included in the Company’s financial statements at January 31, 2012 and April 30, 2011:

(In thousands)	January 31, 2012		April 30, 2011	
	Carrying Value	Fair Value	Carrying Value	Fair Value
Cash	\$409	\$409	\$223	\$223
Finance receivables, net	253,645	201,471	222,305	176,549
Accounts payable	7,232	7,232	7,742	7,742
Revolving credit facilities	83,873	83,873	47,539	47,539

Because no market exists for certain of the Company’s financial instruments, fair value estimates are based on judgments and estimates regarding yield expectations of investors, credit risk and other risk characteristics, including interest rate and prepayment risk. These estimates are subjective in nature and involve uncertainties and matters of judgment and therefore cannot be determined with precision. Changes in assumptions could significantly affect these estimates. The methodology and assumptions utilized to estimate the fair value of the Company’s financial instruments are as follows:

Financial Instrument	Valuation Methodology
Cash	The carrying amount is considered to be a reasonable estimate of fair value due to the short-term nature of the financial instrument.
Finance receivables, net	The Company estimated the fair value of its receivables at what a third party purchaser might be willing to pay. The Company has had discussions with third parties and has bought and sold portfolios, and has had a third party appraisal that indicates a 37.5% discount to face would be a reasonable fair value in a negotiated third party transaction. The sale of finance receivables from Car-Mart of Arkansas to Colonial is at a 37.5% discount. For financial reporting purposes these sale transactions are eliminated. Since the Company does not intend to offer the receivables for sale to an outside third party, the expectation is that the book value at January 31, 2012, will be ultimately collected. By collecting the accounts internally the Company expects to realize more than a third

party purchaser would expect to collect with a servicing requirement and a profit margin included.

Accounts payable The carrying amount is considered to be a reasonable estimate of fair value due to the short-term nature of the financial instrument.

Revolving credit facilities The fair value approximates carrying value due to the variable interest rates charged on the borrowings, which reprice frequently.

H – Weighted Average Shares Outstanding

Weighted average shares of common stock outstanding, which are used in the calculation of basic and diluted earnings per share, are as follows:

	Three Months Ended:		Nine Months Ended:	
	January 31,		January 31,	
	2012	2011	2012	2011
Weighted average shares outstanding-basic	9,610,125	10,758,269	9,886,100	10,958,074
Dilutive options and restricted stock	388,165	241,106	333,696	226,285
Weighted average shares outstanding-diluted	9,998,290	10,999,375	10,219,796	11,184,359
Antidilutive securities not included:				
Options	35,000	580,000	28,333	580,000

I – Stock Based Compensation

The Company has stock based compensation plans available to grant non-qualified stock options, incentive stock options and restricted stock to employees, directors and certain advisors of the Company. The stock based compensation plans currently being utilized are the 2007 Stock Option Plan (“2007 Plan”) and the Stock Incentive Plan (“Incentive Plan”). The Company recorded total stock based compensation expense for all plans of \$1.7 million (\$1.0 million after tax effects) and \$2.2 million (\$1.4 million after tax effects) for the nine months ended January 31, 2012 and 2011, respectively. Tax benefits were recognized for these costs at the Company’s overall effective tax rate.

Stock Options

The Company has options outstanding under two stock option plans approved by the shareholders, the 1997 Stock Option Plan (“1997 Plan”) and the 2007 Plan. While previously granted options remain outstanding, no additional option grants may be made under the 1997 Plan. The shareholders of the Company approved an amendment to the Company’s 2007 Plan on October 13, 2010. The amendment increased from 1,000,000 to 1,500,000 the number of options to purchase our common stock that may be issued under the 2007 Plan. The 2007 Plan provides for the grant of options to purchase shares of the Company’s common stock to employees, directors and certain advisors of the Company at a price not less than the fair market value of the stock on the date of grant and for periods not to exceed ten years. Options granted under the Company’s stock option plans expire in the calendar years 2012 through 2022.

	1997 Plan		2007 Plan	
Minimum exercise price as a percentage of fair market value at date of grant	100	%	100	%
Last expiration date for outstanding options	July 2,		January 31,	
	2017		2022	
Shares available for grant at January 31, 2012	-		447,500	

The fair value of options granted is estimated on the date of grant using the Black-Scholes option pricing model based on the assumptions in the table below.

	January 31,	January 31,
	2012	2011
Expected term (years)	5.0	5.0

Edgar Filing: AMERICAS CARMART INC - Form 10-Q

Risk-free interest rate	1.59	%	1.80	%
Volatility	50	%	50	%
Dividend yield	—		—	

The expected term of the options is based on evaluations of historical and expected future employee exercise behavior. The risk-free interest rate is based on the U.S. Treasury rates at the date of grant with maturity dates approximately equal to the expected life at the grant date. Volatility is based on historical volatility of the Company's common stock. The Company has not historically issued any dividends and does not expect to do so in the foreseeable future.

There were 58,750 and 23,750 options granted during the nine months ended January 31, 2012 and 2011, respectively. The grant-date fair value of options granted during the nine months ended January 31, 2012 and 2011 was \$744,000 and \$244,000, respectively. The options were granted at fair market value on date of grant.

Stock option compensation expense on a pre-tax basis was \$1.6 million (\$996,000 after tax effects) and \$2.1 million (\$1.3 million after tax effects) for the nine months ended January 31, 2012 and 2011, respectively.

The aggregate intrinsic value of outstanding options at January 31, 2012 and 2011 was \$19.7 million and \$6.4 million.

As of January 31, 2012, the Company had \$2.4 million of total unrecognized compensation cost related to unvested options. These unvested outstanding options have a weighted-average remaining vesting period of 1.33 years.

The Company received cash from 86,897 options exercised during the first nine months of fiscal 2012 of \$1.4 million. The impact of these cash receipts is included in financing activities in the accompanying Consolidated Statements of Cash Flows. The intrinsic value for options exercised was \$1.5 million. There were no options exercised during the first nine months of fiscal 2011.

Stock Incentive Plan

The shareholders of the Company approved an amendment to the Company's Stock Incentive Plan on October 14, 2009. The amendment increased from 150,000 to 350,000 the number of shares of common stock that may be issued under the Stock Incentive Plan. For shares issued under the Stock Incentive Plan, the associated compensation expense is generally recognized equally over the vesting periods established at the award date and is subject to the employee's continued employment by the Company.

There were no restricted shares granted during the first nine months of fiscal 2012. During the nine months ended January 31, 2011, there were 84 shares granted with a weighted average fair value of \$26.79 per share, the market price of the Company's stock on the grant dates. A total of 187,027 shares remained available for award at January 31, 2012. There were 29,000 unvested shares at January 31, 2012 with a weighted average grant date fair value of \$22.79.

The Company recorded a compensation cost of \$102,000 (\$63,000 after tax effects) and \$141,000 (\$89,000 after tax effects) related to the Stock Incentive Plan during the nine months ended January 31, 2012 and 2011, respectively.

As of January 31, 2012, the Company has \$352,000 of total unrecognized compensation cost related to unvested awards granted under the Stock Incentive Plan, which the Company expects to recognize over a weighted-average remaining period of 2.63 years.

There were no modifications to any of the Company's outstanding share-based payment awards during fiscal 2011 or during the first nine months of fiscal 2012.

J - Supplemental Cash Flow Information

Supplemental cash flow disclosures are as follows:

(in thousands)	Nine Months Ended January	
	2012	31, 2011
Supplemental disclosures:		
Interest paid	\$ 1,578	\$ 2,191
Income taxes paid, net	10,047	10,863
Non-cash transactions:		
Inventory acquired in repossession and payment protection plan claims	25,706	21,088

Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations

The following discussion should be read in conjunction with the Company's consolidated financial statements and notes thereto appearing elsewhere in this report.

Forward-Looking Information

This Quarterly Report on Form 10-Q contains “forward-looking statements” within the meaning of the Private Securities Litigation Reform Act of 1995. These forward-looking statements address the Company’s future objectives, plans and goals, as well as the Company’s intent, beliefs and current expectations regarding future operating performance, and can generally be identified by words such as “may”, “will”, “should”, “could”, “believe”, “expect”, “anticipate”, “intend”, “plan” and other similar words or phrases. Specific events addressed by these forward-looking statements include, but are not limited to:

- new dealership openings;
- performance of new dealerships;
- same store revenue growth;
- future revenue growth;
- future credit losses;
- the Company’s collection results, including but not limited to collections during income tax refund periods;
 - investment in development of workforce;
 - gross margin percentages;
- financing the majority of growth from profits;
 - seasonality;
 - compliance with tax regulations; and
- the Company’s business and growth strategies.

These forward-looking statements are based on the Company’s current estimates and assumptions and involve various risks and uncertainties. As a result, you are cautioned that these forward-looking statements are not guarantees of future performance, and that actual results could differ materially from those projected in these forward-looking statements. Factors that may cause actual results to differ materially from the Company’s projections include, but are not limited to:

- the availability of credit facilities to support the Company’s business;
- the Company’s ability to underwrite and collect its contracts effectively;
 - competition;
 - dependence on existing management;
- availability of quality vehicles at prices that will be affordable to customers;
 - changes in financing laws or regulations;
 - the outcome of pending tax audits; and
- general economic conditions in the markets in which the Company operates, including but not limited to fluctuations in gas prices, grocery prices and employment levels.

The Company undertakes no obligation to update or revise any forward-looking statements, whether as a result of new information, future events or otherwise. You are cautioned not to place undue reliance on these forward-looking statements, which speak only as of the dates on which they are made.

Overview

America's Car-Mart, Inc., a Texas corporation (the "Company"), is the largest publicly held automotive retailer in the United States focused exclusively on the "Integrated Auto Sales and Finance" segment of the used car market. References to the Company typically include the Company's consolidated subsidiaries. The Company's operations are principally conducted through its two operating subsidiaries, America's Car Mart, Inc., an Arkansas corporation ("Car-Mart of Arkansas"), and Colonial Auto Finance, Inc., an Arkansas corporation ("Colonial"). Collectively, Car-Mart of Arkansas and Colonial are referred to herein as "Car-Mart". The Company primarily sells older model used vehicles and provides financing for substantially all of its customers. Many of the Company's customers have limited financial resources and would not qualify for conventional financing as a result of limited credit histories or past credit problems. As of January 31, 2012, the Company operated 111 dealerships located primarily in small cities throughout the South-Central United States.

Car-Mart has been operating since 1981. Car-Mart has grown its revenues between 3% and 21% per year over the last ten fiscal years (average 14%). Growth results from same dealership revenue growth and the addition of new dealerships. Revenue increased 14.8% for the first nine months of fiscal 2012 compared to the same period of fiscal 2011 due primarily to a 10.9% increase in retail units sold, a 3.6% increase in average retail sales price, 15.8% increase in interest income and a \$1.5 million increase in wholesale sales.

The Company's primary focus is on collections. Each dealership is responsible for its own collections with supervisory involvement of the corporate office. Over the last five full fiscal years, the Company's credit losses as a percentage of sales have ranged between approximately 20.2% in fiscal 2010 and 29.1% in fiscal 2007 (average of 22.7%). Credit losses in fiscal 2007 (29.1%) were higher than the Company's average over the last five years. Credit losses were higher due to several factors and included higher losses experienced in most of the dealerships, including mature dealerships, as the Company saw weakness in the performance of its portfolio as customers had difficulty making payments under the terms of their contracts. Additionally, the Company's rapid growth put stress on its infrastructure, leading to operational difficulties resulting in higher losses. Credit losses in fiscal 2008 returned to a more historical level at 22% of sales as the Company continued to focus on its operational initiatives, including credit and collections efforts. In fiscal 2009, the Company saw the benefit of continuing operational improvements despite negative macro-economic factors and experienced a reduction in credit losses to 21.5% of sales. Improvements in credit losses continued into fiscal 2010 and fiscal 2011 as the provision for credit losses were 20.2% and 20.8% of sales, respectively. While the first nine months of fiscal 2012 experienced slightly higher credit losses of 21.8% of sales compared to 21.4% of sales for the prior year period, the credit losses for the first nine months of fiscal 2012 were in line with historical experience and within an acceptable range. Should collection and credit loss results for the upcoming fourth quarter of fiscal 2012 be within a range consistent with recent quarters, the Company may determine to reduce the allowance for credit losses based on anticipated future losses within the portfolio in light of the consistent credit performance since fiscal 2009.

The primary reason for the general improvement in credit losses in recent periods relates to improvements the Company has made to its business practices, including better underwriting and better collection procedures. These improvements in business practices have led to better collection results. Negative macro-economic issues do not always lead to higher credit loss results for the Company, because the Company provides basic affordable transportation which in many cases is not a discretionary expenditure for customers. The Company has installed a proprietary credit scoring system which enables the Company to monitor the quality of contracts on the front end. Corporate office personnel monitor scores and work with dealerships when the distribution of scores fall outside of prescribed thresholds. The Company continues to invest in the corporate infrastructure within the collection area. The Director of Collection Practices and Review provides timely oversight and more accountability on a consistent basis. In addition, the Company now has several Collection Specialists who assist the Director of Collection Practices and Review with monitoring and training efforts. The Company believes that the proper execution of its business practices is the single most important determinant of credit loss experience.

Historically, credit losses, on a percentage basis, tend to be higher at new and developing dealerships than at mature dealerships. Generally, this is the case because the management at new and developing dealerships tends to be less experienced in making credit decisions and collecting customer accounts and the customer base is less seasoned. Normally the older, more mature dealerships have more repeat customers and on average, repeat customers are a better credit risk than non-repeat customers. The Company does believe that higher energy and fuel costs, general inflation and potentially lower personal income levels affecting customers can have a negative impact on collections.

The Company's gross margins as a percentage of sales have been fairly consistent from year to year. Over the last five full fiscal years, the Company's gross margins as a percentage of sales have ranged between approximately 42% and 44%. Gross margin as a percentage of sales for fiscal 2011 was 42.7%. The Company's gross margins are based upon the cost of the vehicle purchased, with lower-priced vehicles typically having higher gross margin percentages. In

recent years, the Company's gross margins have been negatively affected by the increase in the average retail sales price (a function of a higher purchase price) and higher operating costs, mostly related to increased vehicle repair costs and higher fuel costs. Additionally, the percentage of wholesale sales to retail sales, which relate for the most part to repossessed vehicles sold at or near cost, can have a significant effect on overall gross margin percentages. The negative effect from wholesale sales was higher in fiscal 2007 and during the first quarter of fiscal 2008 due to the increased level of repossession activity coupled with relatively flat retail sales levels. Higher retail sales levels and lower repossessions activity during the latter part of fiscal 2008 and for fiscal 2009 helped to bring gross margin percentages back up. Gross margin percentages in fiscal 2010 and fiscal 2011 benefitted from higher retail sales levels and from a strong wholesale market for repossessed vehicles due to overall used vehicle supply shortages. The Company expects that its gross margin percentage in the near term to generally be in the 42% range but will continue to see significant pressure based on increases in the costs of vehicles purchased.

Hiring, training and retaining qualified associates are critical to the Company's success. The rate at which the Company adds new dealerships and is able to implement operating initiatives is limited by the number of trained managers and support personnel the Company has at its disposal. Excessive turnover, particularly at the dealership manager level, could impact the Company's ability to add new dealerships and to meet operational initiatives. The Company has added resources to recruit, train and develop personnel especially personnel targeted to fill dealership manager positions. The Company expects to continue to invest in the development of its workforce in fiscal 2012 and beyond.

Three Months Ended January 31, 2012 vs. Three Months Ended January 31, 2011

Revenues increased by \$12.8 million, or 13.8%, for the three months ended January 31, 2012 as compared to the same period in the prior fiscal year. The increase was principally the result of (i) revenue growth from dealerships that operated a full three months in both periods (\$7.3 million, or 7.9%), (ii) revenue growth from dealerships opened during the three months ended January 31, 2011 (\$877,000), and (iii) revenue from dealerships opened after January

31, 2011 (\$4.6 million).

Cost of sales as a percentage of sales decreased 0.4% to 57.8% for the three months ended January 31, 2012 from 58.2% in the same period of the prior fiscal year. The decrease from the prior year period relates primarily to slightly lower overall cost of sales expenses and improved pricing efficiencies offset by lower margins on the PPP and service contract products. The Company will continue to focus efforts on holding down purchase costs and expects to see gross margin percentages generally hold in the 42% range over the near term. Top line sales levels in relation to wholesale volumes, resulting from credit loss experience, can have a significant effect on gross margin percentages.

19

Selling, general and administrative expenses as a percentage of sales were 18.3% for the three months ended January 31, 2012, a decrease of 0.9% from the same period of the prior fiscal year. In dollar terms, overall selling, general and administrative expenses increased \$1.3 million in the third quarter of fiscal 2012 compared to the same period of the prior fiscal year, consisting primarily of increased payroll costs, incremental costs at new dealerships as well as higher marketing and advertising costs. Many of the Company's compensation arrangements are tied to financial performance and as such, more payroll costs are incurred during periods of improved financial results.

Provision for credit losses as a percentage of sales increased slightly to 22.2% for the three months ended January 31, 2012 compared to 21.9% for the three months ended January 31, 2011. The increase between periods was partially related to the timing of collections for the third quarter of fiscal 2012 when compared to the prior year quarter. The Company continues to push for improvements and better execution of its collection practices. However, the extended negative macro-economic issues continue to put pressure on our customers and the resulting collections of our finance receivables. The Company has made considerable investment in the corporate infrastructure within the collection area which is continuing to have a positive effect on results by providing more oversight and accountability on a consistent basis. The Company believes that the proper execution of its business practices is the single most important determinate of credit loss experience.

Interest expense (excluding the non-cash charge related to the change in fair value of the Company's interest rate swap agreement) for the three months ended January 31, 2012 as a percentage of sales decreased to 0.7% for the three months ended January 31, 2012 compared to 0.8% for the three months ended January 31, 2011. Lower interest rates on the Company's variable rate debt were partially offset by higher average borrowings during the three months ended January 31, 2012 (\$80.9 million compared to \$55.7 million in the prior year).

In fiscal 2011, the Company had an interest rate swap agreement (the "Agreement") which was not designated as a hedge by Company management; therefore, the gain (loss) on the Agreement during the three months ended January 31, 2011 is reported as a component of interest expense in earnings. The non-cash charge related to the Agreement was caused by a number of factors, including changes in interest rates, amount of notional debt outstanding, and number of months until maturity. The Company terminated the interest rate swap agreement in April 2011 for \$1.3 million due to unfavorable interest rate movements. The net gain for the Agreement reported in earnings as interest expense was \$250,000 for the three months ended January 31, 2011. The interest on the credit facilities, the net settlements under the interest rate swap, and the changes in the fair value of the Agreement are all reflected in Interest expense in the Company's Condensed Consolidated Statement of Operations.

Accounts over 30 days past due	4.7	% 4.6	%			

Nine Months Ended January 31, 2012 vs. Nine Months Ended January 31, 2011

Revenues increased by \$40.8 million, or 14.8%, for the nine months ended January 31, 2012 as compared to the same period in the prior fiscal year. The increase was principally the result of (i) revenue growth from stores that operated a full nine months in both periods (\$22.5 million, or 8.3%), (ii) revenue growth from stores opened during the nine months ended January 31, 2011 and stores that opened or closed a satellite location after January 31, 2011 (\$7.3 million), and (iii) revenue from stores opened after January 31, 2011 (\$11.0 million).

Cost of sales as a percentage of sales increased 0.3% to 57.5% for the nine months ended January 31, 2012 from 57.2% in the same period of the prior fiscal year. The increase from the prior year period relates primarily to an increase in wholesale sales, an increase in the average purchase price of vehicles, and higher operating expenses particularly transport costs. Wholesale sales are for the most part sales of repossessed vehicles or trade-ins at break-even. The Company will continue to focus efforts on holding down purchase costs and expects to see gross margin percentages in the 42% range in the near term. Top line sales levels in relation to wholesale volumes,

resulting from credit loss experience, can have a significant effect on gross margin percentages.

Selling, general and administrative expense as a percentage of sales was 17.6% for the nine months ended January 31, 2012, a decrease of 0.7% from the same period of the prior fiscal year. Selling, general and administrative expenses are, for the most part, more fixed in nature. The overall dollar increase of \$4.8 million related primarily to higher payroll costs and to incremental costs related to new locations opened after January 31, 2011. Additionally, many of the Company's compensation arrangements are tied to financial performance and as such, more payroll costs are incurred during periods of improved financial results.

Provision for credit losses as a percentage of sales increased 0.4% to 21.8% for the nine months ended January 31, 2012 from 21.4% in the same period of the prior fiscal year. The increase between periods was partially related to the timing of collections for the third quarter of fiscal 2012 when compared to the prior year quarter. Extended negative macro-economic issues continue to put pressure on our customers and the resulting collections of our finance receivables. However, despite the slight increase in credit losses during the first nine months of fiscal 2012 compared to the prior year period, the credit losses for the current year period were in line with historical experience and within an acceptable range. The Company continues to push for improvements and better execution of its collection practices. The Company believes that the proper execution of its business practices is the single most important determinate of credit loss experience and that the credit losses in both the current and prior year periods reflect the improvements in oversight and accountability provided by the Company's investments in our corporate infrastructure within the collection area.

Interest expense (excluding the non-cash charge related to the change in fair value of the Agreement) as a percentage of sales decreased 0.3% to 0.6% for the nine months ended January 31, 2012 from 0.9% for the same period of the prior fiscal year. The decrease was attributable to lower interest rates on the Company's variable rate debt partially offset by higher average borrowings during the nine months ended January 31, 2012 as compared to the same period in the prior fiscal year (\$69.2 million compared to \$48.9 million).

In fiscal 2011 the Company had an interest rate swap agreement (the "Agreement") which was not designated as a hedge by Company management; therefore, the gain (loss) on the Agreement during the nine months ended January 31, 2011 is reported as a component of interest expense in earnings. The net loss for the Agreement reported in earnings as interest expense is \$33,000 for the nine months ended January 31, 2011. The non-cash charge related to the Agreement was caused by a number of factors, including changes in interest rates, amount of notional debt outstanding, and number of months until maturity. The Company terminated the interest rate swap agreement in April 2011 for \$1.3 million due to unfavorable interest rate movements. The interest on the credit facilities, the net settlements under the interest rate swap and the changes in the fair value of the Agreement, are all reflected in Interest expense in the Company's Condensed Consolidated Statement of Operations.

Financial Condition

The following table sets forth the major balance sheet accounts of the Company as of the dates specified (in thousands):

	January 31, 2012	April 30, 2011
Assets:		
Finance receivables, net	\$ 253,645	\$ 222,305
Inventory	29,831	23,595
Income taxes receivable, net	365	1,220
Property and equipment, net	27,048	25,532
Liabilities:		
Accounts payable and accrued liabilities	19,914	19,091
Deferred payment protection plan revenue	10,132	8,963
Deferred tax liabilities, net	16,466	13,405
Debt facilities	83,873	47,539

Historically, finance receivables tended to grow slightly faster than revenue growth. This has historically been due, to a large extent, to an increasing weighted average term necessitated by increases in the average retail sales price. The weighted average term for installment sales contracts at January 31, 2012 increased slightly as compared to January

31, 2011 (27.7 months vs. 27.0 months). Benefits related to software and operational changes made in an effort to shorten relative terms by maximizing up-front equity and scheduling payments to coincide with anticipated income tax refunds have helped maintain the overall term length in the face of the increasing average retail sales prices. Revenue growth results from same store revenue growth and the addition of new dealerships. The Company anticipates going forward that the growth in finance receivables will approximate overall revenue growth on an annual basis as the improvements in underwriting and collection procedures are expected to result in strong collections.

During the first nine months of fiscal 2012, inventory increased 26.4% (\$6.2 million) as compared to inventory at April 30, 2011. The increase resulted from additional inventory for new dealerships and an expected increase in demand for the type of vehicle the Company purchases for resale as well as the Company's desire to offer a broad mix and sufficient quantities of vehicles to adequately serve its expanding customer base. The Company will continue to manage inventory levels in the future to ensure adequate supply, in volume and mix, and to meet anticipated sales demand.

Income taxes receivable, net, decreased \$855,000 during the first nine months of fiscal 2012 as compared to April 30, 2011 due primarily to the fact that the majority of the income tax receivable existing at April 30, 2011 was refunded during the first quarter of 2012.

Property and equipment, net, increased \$1.5 million during the nine months ended January 31, 2012 as compared to property and equipment, net, at April 30, 2011 as the Company incurred expenditures related to new dealerships as well as to refurbish and expand existing locations.

Accounts payable and accrued liabilities increased \$823,000 during the first nine months of fiscal 2012 as compared to Accounts payable and accrued liabilities at April 30, 2011 due primarily to timing of payroll periods and the amount and timing of cash overdrafts.

Deferred tax liabilities, net, increased \$3.1 million during the first nine months of fiscal 2012 as compared to April 30, 2011 due primarily to the increase in Finance Receivables.

Borrowings on the Company's revolving credit facilities fluctuate primarily based upon a number of factors including (i) net income, (ii) finance receivables changes, (iii) income taxes, (iv) capital expenditures and (v) common stock repurchases. Historically, income from continuing operations, as well as borrowings on the revolving credit facilities, have funded the Company's finance receivables growth, capital asset purchases and common stock repurchases. In the first nine months of fiscal 2012, the Company had a \$36.3 million increase in its debt facilities to help finance receivables growth of \$39.9 million, capital expenditures of \$3.2 million and common stock repurchases of \$29.9 million.

Liquidity and Capital Resources

The following table sets forth certain summarized historical information with respect to the Company's Statements of Cash Flows (in thousands):

	Nine Months Ended January 31,	
	2012	2011
Operating activities:		
Net income	\$ 23,346	\$ 19,842
Provision for credit losses	62,056	52,994
Losses on claims for payment protection plan	4,353	3,625

Debt facilities, net	36,334	16,174
Change in cash overdrafts	1,370	2,339
Exercise of stock options, including tax benefits and issuance of common stock	1,552	-
Issuance of common stock	118	103
Purchase of common stock	(29,950)	(16,516)
Dividend payments	(30)	(30)
Total	9,394	2,070
Increase in Cash	\$ 186	\$ 159

The primary drivers of operating profits and cash flows include (i) top line sales, (ii) interest rates on finance receivables, (iii) gross margin percentages on vehicle sales, and (iv) credit losses. The Company generates cash flow from income from operations. Historically, most or all of this cash is used to fund finance receivables growth, capital expenditures and common stock repurchases. To the extent finance receivables growth, capital expenditures and common stock repurchases exceed income from operations generally the Company increases its borrowings under its revolving credit facilities. The majority of the Company's growth has been self-funded.

Cash flows from operations for the nine months ended January 31, 2012 compared to the same period in the prior fiscal year were negatively impacted by (i) an increase in finance receivables and (ii) an increase in inventory, partially offset by (iii) higher net income, (iv) higher non-cash charges including credit losses, depreciation, and losses on claims for payment protection plan, (v) a decrease in income taxes receivable and (vi) increased proceeds from repossessed vehicles. Finance receivables, net, increased by \$31.3 million from April 30, 2011 to January 31, 2012.

The purchase price the Company pays for a vehicle has a significant effect on liquidity and capital resources. Several external factors can negatively affect the purchase cost of vehicles. Decreases in the overall volume of new car sales, particularly domestic brands, leads to decreased supply in the used car market. Also, the expansion of the customer base due in part to constrictions in consumer credit, as well as general economic conditions, can have an overall effect on the demand for the type of vehicle the Company purchases for resale. Because the Company bases its selling price on the purchase cost for the vehicle, increases in purchase costs result in increased selling prices. As the selling price increases, it becomes more difficult to keep the gross margin percentage and contract term in line with historical results because the Company's customers have limited incomes and their car payments must remain affordable within their individual budgets. The Company has seen increases in the purchase cost of vehicles and resulting increases in selling prices over the last few years. Management does expect continuing increases in vehicle purchase costs on a going-forward basis. The Company has experienced recent increases in average vehicle purchase costs which can be attributed to the continuing tight supply of vehicles. Management also expects the availability of consumer credit within the automotive industry to continue to be constricted when compared to recent history and that this will continue to result in overall increases in demand for most, if not all, of the vehicles the Company purchases for resale. The Company has devoted significant efforts to improve its purchasing processes to ensure adequate supply at appropriate prices. This is expected to result in gross margin percentages generally in the 42% range in the near term with overall contract terms increasing, somewhat mitigated by software and operational changes which have been made to structure special payments during income tax refund periods. In an effort to ensure an adequate supply of vehicles at appropriate prices, the Company has increased the level of accountability for its purchasing agents including the establishment of sourcing and pricing guidelines. Additionally, the Company is expanding its purchasing territories to larger cities in close proximity to its dealerships and increasing its efforts to purchase vehicles from individuals at the dealership level as well as via the internet.

Macro-economic factors can have an effect on credit losses and resulting liquidity. General inflation, particularly within staple items such as groceries and gasoline, as well as overall unemployment levels can have a significant effect on collection results and ultimately credit losses. The Company has made improvements to its business processes within the last few years to strengthen controls and provide stronger infrastructure to support its collection efforts. With these improvements, the Company anticipates that credit losses on a going-forward basis will be in the range of 20-22% of sales on an annual basis. However, significant negative macro-economic effects could cause actual results to differ from the anticipated range. Management continues to focus on improved execution at the dealership level, specifically as related to working individually with its customers concerning collection issues.

The Company has generally leased the majority of the properties where its dealerships are located. As of January 31, 2012, the Company leased approximately 75% of its dealership properties. The Company expects to continue to lease the majority of the properties where its dealerships are located.

The Company's revolving credit facilities generally limit distributions by the Company to its shareholders in order to repurchase the Company's common stock to 75% of consolidated net income measured on a trailing twelve-month basis and require the maintenance of certain financial ratios, as defined. Thus, the Company is limited in the amount of dividends or other distributions it can make to its shareholders without the consent of the Company's lenders. On May 2, 2011, the revolving credit facilities were amended to allow for up to \$40 million in share repurchases during fiscal 2012, subject to the maintenance of certain financial ratios as defined.

At January 31, 2012, the Company had \$409,000 of cash on hand and an additional \$21 million of availability under its revolving credit facilities (see Note F to the Consolidated Financial Statements). On a short-term basis, the Company's principal sources of liquidity include income from operations and borrowings under its revolving credit facilities. On a longer-term basis, the Company expects its principal sources of liquidity to consist of income from operations and borrowings under revolving credit facilities and/or fixed interest term loans. The Company's revolving credit facilities mature in November 2013 and the Company expects that it will be able to renew or refinance its revolving credit facilities on or before the date they mature. Furthermore, while the Company has no specific plans to

issue debt or equity securities, the Company believes, if necessary, it could raise additional capital through the issuance of such securities.

The Company expects to use cash to (i) grow its finance receivables portfolio, (ii) purchase property and equipment of approximately \$4 million in the next 12 months in connection with refurbishing existing dealerships and adding new dealerships, (iii) repurchase shares of common stock when favorable conditions exist and (iv) reduce debt to the extent excess cash is available.

The Company believes it will have adequate liquidity to continue to grow its revenues and to satisfy its capital needs for the foreseeable future.

Contractual Payment Obligations

There have been no material changes outside of the ordinary course of business in the Company's contractual payment obligations from those reported at April 30, 2011 in the Company's Annual Report on Form 10-K.

Off-Balance Sheet Arrangements

The Company has entered into operating leases for approximately 75% of its dealerships and office facilities. Generally these leases are for periods of three to five years and usually contain multiple renewal options. The Company uses leasing arrangements to maintain flexibility in its dealership locations and to preserve capital. The Company expects to continue to lease the majority of its dealerships and office facilities under arrangements substantially consistent with the past.

Other than its operating leases, the Company is not a party to any off-balance sheet arrangement that management believes is reasonably likely to have a current or future effect on the Company's financial condition, revenues or expenses, results of operations, liquidity, capital expenditures or capital resources that are material to investors.

Related Finance Company Contingency

Car-Mart of Arkansas and Colonial do not meet the affiliation standard for filing consolidated income tax returns, and as such they file separate federal and state income tax returns. Car-Mart of Arkansas routinely sells its finance receivables to Colonial at what the Company believes to be fair market value and is able to take a tax deduction at the time of sale for the difference between the tax basis of the receivables sold and the sales price. These types of transactions, based upon facts and circumstances, have been permissible under the provisions of the Internal Revenue Code ("IRC") as described in the Treasury Regulations. For financial accounting purposes, these transactions are eliminated in consolidation and a deferred tax liability has been recorded for this timing difference. The sale of finance receivables from Car-Mart of Arkansas to Colonial provides certain legal protection for the Company's finance receivables and, principally because of certain state apportionment characteristics of Colonial, also has the effect of reducing the Company's overall effective state income tax rate by approximately 240 basis points. The actual interpretation of the Regulations is in part a facts and circumstances matter. The Company believes it satisfies the material provisions of the Regulations. Failure to satisfy those provisions could result in the loss of a tax deduction at the time the receivables are sold and have the effect of increasing the Company's overall effective income tax rate as well as the timing of required tax payments.

In fiscal 2010, the Internal Revenue Service ("IRS") concluded the examinations of the Company's income tax returns for fiscal years 2008 and 2009. As a result of the examinations, the IRS has questioned whether deferred payment protection plan ("PPP") revenue associated with the sale of certain receivables are subject to the acceleration of advance payments provision of the IRC and whether the Company may deduct losses on the sale of the PPP receivables in excess of the income recognized on the underlying contracts. The issue is timing in nature and does not affect the overall tax provision, but affects the timing of required tax payments.

By letter dated April 2, 2010, the IRS delivered to the Company a revenue agent's report, which proposes an adjustment for the items discussed above as well as interest. The Company intends to vigorously defend its position, and on April 23, 2010, the Company filed an administrative protest with the Appeals Office of the IRS. The protest disputes the income tax changes proposed by the IRS and requests a conference with a representative of the Appeals Office. The Company has had a preliminary conference with the Appeals Office and the matter continues to be under review and discussion. If the matter is not resolved in the Appeals Office, and if the IRS intends to pursue its position, the Company fully intends to ask an appropriate court to consider the issue.

The Company's policy is to recognize accrued interest related to unrecognized tax benefits in interest expense and penalties in operating expenses. The Company had no accrued penalties and/or interest as of January 31, 2012.

Critical Accounting Policies

The preparation of financial statements in conformity with generally accepted accounting principles in the United States of America requires the Company to make estimates and assumptions in determining the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from the Company's estimates. The Company believes the most significant estimate made in the preparation of the accompanying Condensed Consolidated Financial Statements relates to the determination of its allowance for credit losses, which is discussed below. The Company's accounting policies are discussed in Note B to the accompanying Condensed Consolidated Financial Statements.

The Company maintains an allowance for credit losses on an aggregate basis at an amount it considers sufficient to cover estimated losses in the collection of its finance receivables. At January 31, 2012, the weighted average total contract term was 27.7 months with 19.9 months remaining. The reserve amount in the allowance for credit losses at January 31, 2012, \$68.7 million, was 22% of the principal balance in Finance receivables of \$322.4 million, less unearned payment protection plan revenue of \$10.1 million. The estimated reserve amount is the Company's anticipated future net charge-offs for losses incurred through the balance sheet date. The allowance takes into account historical credit loss experience (both timing and severity of losses), with consideration given to recent credit loss trends and changes in contract characteristics (i.e., average amount financed, months outstanding at loss date, term and age of portfolio), delinquency levels, collateral values, economic conditions and underwriting and collection practices. The allowance for credit losses is reviewed at least quarterly by management with any changes reflected in current operations. The calculation of the allowance for credit losses uses the following primary factors:

- The number of units repossessed or charged-off as a percentage of total units financed over specific historical periods of time.
- The average net repossession and charge-off loss per unit during the last eighteen months segregated by the number of months since the contract origination date and adjusted for the expected future average net charge-off loss per unit. About 50% of the charge-offs that will ultimately occur in the portfolio are expected to occur within 10-11 months following the balance sheet date. The average age of an account at charge-off date is 11 months.
- The timing of repossession and charge-off losses relative to the date of sale (i.e., how long it takes for a repossession or charge-off to occur) for repossessions and charge-offs occurring during the last eighteen months.

A point estimate is produced by this analysis which is then supplemented by any positive or negative subjective factors to arrive at an overall reserve amount that management considers to be a reasonable estimate of incurred losses that will be realized via actual charge-offs in the future. Although it is at least reasonably possible that events or circumstances could occur in the future that are not presently foreseen which could cause actual credit losses to be materially different from the recorded allowance for credit losses, the Company believes that it has given appropriate consideration to all relevant factors and has made reasonable assumptions in determining the allowance for credit losses. Periods of economic downturn do not necessarily lead to increased credit losses because the Company provides basic affordable transportation to customers that, for the most part, do not have access to public transportation. The effectiveness of the execution of internal policies and procedures within the collections area has historically had a more significant effect on collection results than macro-economic issues. Since fiscal 2009, the Company's credit loss results have remained below 22% of the principal balance of finance receivables. Should collections and credit loss results for the upcoming fourth quarter of fiscal 2012 be within a range consistent with recent quarters, the Company may determine to reduce the allowance for credit losses based on anticipated future losses within the portfolio in light of the consistent credit performance during these periods. A 1% change, as a percentage of Finance receivables, in the allowance for credit losses would equate to an approximate pre-tax amount of \$3.1 million.

Recent Accounting Pronouncements

Occasionally, new accounting pronouncements are issued by the Financial Accounting Standards Board ("FASB") or other standard setting bodies which the Company adopts as of the specified effective date. Unless otherwise discussed, the Company believes the impact of recently issued standards which are not yet effective will not have a material impact on its consolidated financial statements upon adoption.

Goodwill. In September 2011, the FASB adopted an update regarding testing goodwill and other intangibles for impairment. The update permits an entity to first assess qualitative factors to determine whether it is more likely than not that the fair value of a reporting unit is less than its carrying amount as a basis for determining whether it is necessary to perform the two-step goodwill impairment test. This update will be effective for annual and interim goodwill impairment tests performed for fiscal years beginning after December 15, 2011. This update is not expected to have a material impact on the Company's financial statements.

Seasonality

The Company's third fiscal quarter (November through January) was historically the slowest period for vehicle sales. Conversely, the Company's first and fourth fiscal quarters (May through July and February through April) were historically the busiest times for vehicle sales. Therefore, the Company generally realized a higher proportion of its revenue and operating profit during the first and fourth fiscal quarters. However, beginning in fiscal 2008 tax refund anticipation sales have begun in early November and continued through January (the Company's third fiscal quarter). The success of the tax refund anticipation sales effort has led to higher sales levels during the third fiscal quarters and the Company expects this trend to continue in future periods, but a shift in the timing of actual tax refund dollars in the Company's markets could have an effect in future years. If conditions arise that impair vehicle sales during the first, third or fourth fiscal quarters, the adverse effect on the Company's revenues and operating results for the year could be disproportionately large.

Item 3. Quantitative and Qualitative Disclosures about Market Risk

The Company is exposed to market risk on its financial instruments from changes in interest rates. In particular, the Company has exposure to changes in the prime interest rate of its lender. The Company does not use financial instruments for trading purposes. The Company has in the past entered into an interest rate swap agreement to manage interest rate risk; however, as of January 31, 2012, the Company has no interest rate swap agreement in effect.

Interest rate risk. The Company's exposure to changes in interest rates relates primarily to its debt obligations. The Company is exposed to changes in interest rates as a result of its revolving credit facilities, and the interest rates charged to the Company under its credit facilities fluctuate based on its primary lender's base rate of interest. The Company had total indebtedness of \$83.9 million outstanding at January 31, 2012. The impact of a 1% increase in interest rates on this amount of debt would result in increased annual interest expense of approximately \$839,000 and a corresponding decrease in net income before income tax.

The Company's earnings are impacted by its net interest income, which is the difference between the income earned on interest-bearing assets and the interest paid on interest-bearing notes payable. The Company's finance receivables generally bear interest at fixed rates ranging from 5.5% to 19% (weighted average of 14.7%), while its revolving notes payable contain variable interest rates that fluctuate with market interest rates. Prior to June 2009, interest rates charged on finance receivables originated in the State of Arkansas were limited to the federal primary credit rate. Typically, the Company had charged interest on its Arkansas contracts at or near the maximum rate allowed by law. Thus, while the interest rates charged on the Company's contracts do not fluctuate once established, new contracts originated in Arkansas were set at a spread above the federal primary credit rate which does fluctuate. Effective June 26, 2009, the Company began charging 12% on contracts originated in Arkansas. This was due to the passage by the U.S. Congress of the Supplemental Appropriations Act of 2009 which was signed into law on June 24, 2009. Within this legislation was a provision that allowed the Company to charge up to 17% on sales financed to customers in Arkansas, which expired via a sunset clause on December 31, 2010. On November 2, 2010, voters in Arkansas approved a state constitutional amendment to allow up to 17% interest for non-bank loans and contracts in the state. Subsequently, an appeal challenging the constitutionality of the amendment was filed with the Arkansas Supreme Court. In June 2011, the Arkansas Supreme Court upheld the amendment. In mid-July 2011, the Company began charging a fixed 15% interest rate on new contracts for all dealerships in all states in which the Company operates. At January 31, 2012, approximately 45% of the Company's finance receivables were originated in Arkansas.

Item 4. Controls and Procedures

a) Evaluation of Disclosure Controls and Procedures

Based on management's evaluation (with the participation of the Company's Chief Executive Officer and Chief Financial Officer), as of January 31, 2012, the Company's Chief Executive Officer and Chief Financial Officer have concluded that the Company's disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) under the Securities Exchange Act of 1934, as amended (the "Exchange Act")), are effective to provide reasonable assurance that information required to be disclosed by the Company in the reports it files or submits under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in the SEC rules and forms, and that such information is accumulated and communicated to management, including the Company's Chief Executive Officer (principal executive officer) and Chief Financial Officer (principal financial officer), to allow timely decisions regarding required disclosure.

b) Changes in Internal Control Over Financial Reporting

There were no changes in the Company's internal control over financial reporting (as defined in Rules 13a-15(f) and 15d-15(f) under the Exchange Act) that occurred during the Company's last fiscal quarter that have materially affected, or are reasonably likely to materially affect, the Company's internal control over financial reporting.

Item 4T. Controls and Procedures

Not applicable

28

PART II

Item 2. Unregistered Sales of Equity Securities and Use of Proceeds

The Company is authorized to repurchase up to one million shares of its common stock under the common stock repurchase program last amended and approved by the Board of Directors on November 17, 2011. The following table sets forth information with respect to purchases made by or on behalf of the Company of shares of the Company's common stock during the periods indicated:

Period	Total Number of Shares Purchased	Average Price Paid per Share	Total Number of Shares Purchased as Part of Publicly Announced Plans or Programs(1)	Maximum Number of Shares that May Yet Be Purchased Under the Plans or Programs(1)
November 1, 2011 through November 30, 2011	74,087	\$ 34.77	74,087	932,809
December 1, 2011 through December 31, 2011	0	\$ 0.00	0	932,809
January 1, 2012 through January 31, 2012	24,114	\$ 39.34	24,114	908,695
Total	98,201	\$ 35.89	98,201	908,695

(1) The above described stock repurchase program has no expiration date.

Item 4. Mine Safety Disclosure

Not applicable

Exhibit Number	Description of Exhibit
3.1	Articles of Incorporation of the Company, as amended. (Incorporated by reference to Exhibits 4.1-4.8 to the Company's Registration Statement on Form S-8 filed with the SEC on November 16, 2005 (File No. 333-129727))
3.2	Amended and Restated Bylaws of the Company dated December 4, 2007. (Incorporated by reference to Exhibit 3.2 to the Company's Quarterly Report on Form 10-Q for the quarter ended October 31, 2007 filed with the SEC on December 7, 2007)
31.1	Certification of Chief Executive Officer pursuant to Rule 13a-14(a) of the Securities Exchange Act of 1934, as amended (the "Exchange Act").
31.2	Certification of Chief Financial Officer pursuant to Rule 13a-14(a) of the Exchange Act.
32.1	Certification of the Chief Executive Officer and Chief Financial Officer pursuant to Rule 13a-14(b) of the Exchange Act and 18 U.S.C. Section 1350, as adopted pursuant to Section 906 of the Sarbanes-Oxley Act of 2002.
