CATALYST SEMICONDUCTOR, INC.
NOTES TO UNAUDITED CONDENSED CONSOLIDATED FINANCIAL STATEMENTS

NOTE 1 - BASIS OF PRESENTATION:

In the opinion of the management of Catalyst Semiconductor, Inc. (Company), the unaudited condensed consolidated interim financial statements included herein have been prepared on the same basis as the April 30, 2001 audited consolidated financial statements and include all adjustments, consisting of only normal recurring adjustments, necessary to fairly state the information set forth herein. The consolidated statements include the accounts of the Company's wholly owned subsidiary, Nippon Catalyst KK, a sales organization in Japan. Certain prior period balances have been reclassified to conform to the current period presentation. The statements have been prepared in accordance with the regulations of the Securities and Exchange Commission (SEC), but omit certain information and footnote disclosures necessary to present the statements in accordance with accounting principles generally accepted in the United States of America. For further information, refer to the consolidated financial statements and footnotes thereto included in the Company's Annual Report on Form 10-K for the year ended April 30, 2001. The results of operations for the nine month period ended January 31, 2002 are not necessarily indicative of the results to be expected for the entire year ending April 30, 2002 or any other future period.

The Company's business is highly cyclical and has been subject to significant downturns at various times which have been characterized by reduced product demand, production overcapacity and significant erosion of average selling prices. Throughout fiscal 1998 and 1999, the market for certain FLASH and EEPROM devices, which comprise the majority of Catalyst's business, experienced an excess market supply relative to demand which resulted in a significant downward trend in prices. During fiscal 2000, the semiconductor

market rebounded from a cyclical decline which had a favorable impact on the Company's revenues and gross margins into fiscal 2001 through the quarter ended October 2000. However, during the period from November 2000 through January 2002, the market for the Company's products has become more competitive as a result of the increased availability of products when demand was decreasing. The Company could experience other such downward trends in product pricing in the future which could further adversely affect the Company's operating results.

The Company's fiscal year and its first, second and third fiscal quarters end on the Sunday closest to April 30, July 31, October 31 and January 31, respectively. For purposes of financial statement presentation, the year end date is expressed as April 30 and the quarter end dates are expressed as July 31, October 31 or January 31.

Comprehensive income is defined as the change in equity of a business enterprise during a period from transactions and other events and circumstances from non-owner sources. Through January 31, 2002, the Company has not had any items of comprehensive income other than net income (loss).

NOTE 2 -- NET INCOME (LOSS) PER SHARE:

Basic net income (loss) per share is computed by dividing net income (loss) available to common stockholders (numerator) by the weighted average number of common shares outstanding (denominator) during the period and excludes the dilutive effect of stock options. Diluted net income (loss) per share gives effect to all dilutive potential common shares outstanding during a period. In computing diluted net income (loss) per share, the average stock price for the period is used in determining the number of shares assumed to be purchased from exercise of stock options.

A reconciliation of the numerators and denominators of the basic and diluted income (loss) per share is presented below:

	THREE MONTHS ENDED		NINE MONTHS
	JANUARY 31, 2002	JANUARY 31, 2001	JANUARY 31, 2002
	(IN THOUSANDS, EXCEPT PER SHARE DATA		
Net income (loss)	$ 164	$ 7,011	$ (442)
Shares calculation:			
Weighted average shares outstanding--basic	17,669	16,950	17,704
Effect of dilutive securities:			
Stock options	2,808	3,254	--
Weighted average shares outstanding--diluted	20,477	20,204	17,704
Net income (loss) per share:			
Basic	$ 0.01	$ 0.41	$(0.02)
Diluted	$ 0.01	$ 0.35	$(0.02)

Options to purchase 1,722,000 shares of common stock at prices from $4.07 to $9.50 per share outstanding during the quarter ended January 31, 2002 and options to purchase 1,216,999 shares of common stock at prices from $6.06 to $9.50 per share outstanding during the quarter ended January 31, 2001 were not included in the computation of diluted income (loss) per share because the inclusion of such options would have been antidilutive.

Options to purchase 6,021,000 shares of common stock at prices from $0.11 to $9.50 per share outstanding during the nine month period ended January 31, 2002 and options to purchase 152,500 shares of common stock at prices from $7.88 to $9.50 per share outstanding during the nine month period ended January 31, 2001 were not included in the computation of diluted income (loss) per share because the inclusion of such options would have been antidilutive.

NOTE 3 - BALANCE SHEET COMPONENTS (IN THOUSANDS):

	JANUARY 31, 2002	APRIL 30, 2001
Accounts receivable:		
Accounts receivable	$ 8,894	$ 11,561

	15,020	14,599
Less: accumulated depreciation and amortization	(12,777)	(12,010)
	$ 2,243	$ 2,589
Accrued expenses:		
Accrued income taxes	$ 2,065	$ 2,083
Accrued employee compensation	1,553	1,612
Other	1,510	2,054
	$ 5,128	$ 5,749

NOTE 4 - LINE OF CREDIT:

As of April 30, 2001, the Company had approximately $2.0 million of secured loans owed to a bank. As of the same date, the Company had $2.0 million cash deposited at the same bank in an interest bearing account to serve as collateral. As of April 30, 2001, under the terms of its borrowing agreement, the Company was eligible to borrow approximately $3.0 million. Also, under the terms of the borrowing agreement, the Company could borrow the lesser of $5.0 million or an amount determined by a formula applied to eligible accounts receivable. Amounts borrowed under the borrowing agreement were secured by accounts receivable and were subject to compliance with loan covenants. The borrowing agreement bore interest at a variable rate equal to the bank's prime lending rate (7.5% at April 30, 2001) plus 2.5%. On June 30, 2001, the Company repaid the outstanding balance and cancelled the agreement.

NOTE 5 - 1998 SPECIAL EQUITY INCENTIVE PLAN:

In December 1998, the Company adopted an additional stock option plan entitled the Special Equity Incentive Plan (Special Option Plan) for incentive stock options and non-statutory stock options for certain directors, officers and consultants of the Company. A total of 3.5 million shares of Common Stock have been reserved for issuance under the Special Option Plan. Options granted under the Special Option Plan are for periods not to exceed ten years. Options generally vest over four year periods. During fiscal 1999, options totaling 3.0 million shares were granted under the plan at a price of $0.125 per share when the market was at $0.33 per share. As a result, an aggregate of $517,000 of compensation expense will be recognized over the four year vesting period of the options, $28,000 of which was recognized during the three month period ended January 31, 2002. An aggregate of $416,000 of such expense has been recognized through January 31, 2002 and $101,000 remains to be recognized in future periods.

NOTE 6 - CONTINGENCIES:

On April 17, 2001, Xicor Corporation (Xicor) filed a complaint against the Company in the United States District Court for the District of Delaware. The complaint alleges that certain products that the Company has recently introduced infringe on a patent that Xicor obtained in 1988 relating to the design of a certain type of digital potentiometer. Xicor is seeking royalties on past revenues in addition to enjoining the Company from any further sales of the products in question. The Company does not agree with such allegations and intends to vigorously defend itself against the suit. Since the products included in the suit have only recently been introduced, revenues from those products have not been material.

In 1989, the Company entered into a license agreement with Philips Export B.V. and U.S. Philips Corporation (Philips) to license technology relating to their I2C bus technology. The Company has received a communication from Philips suggesting that royalties may be due and owing on past sales of certain products. The Company continues to investigate this claim.

In the normal course of business, the Company receives notification of threats of legal action in relation to claims of patent infringement by the Company. Although no assurances can be given as to the results of these claims, management does not believe that any such results will have a material adverse impact on the Company's financial condition, results of operations or cash flows.

NOTE 7 - RELATED PARTY TRANSACTIONS:

During the fourth quarter of fiscal 2000, the Company began taking delivery of wafers fabricated at X-fab Texas, Inc. (Xfab), a wholly owned

subsidiary of Elex NV, a Belgian holding company that owns 31.1% of the outstanding shares of the Company as of February 28, 2002. Mr. Roland Duchatelet, the Chairman and CEO of Elex NV, serves as a member of the Company's Board of Directors. The wafers provided by Xfab supplement the same designs fabricated at Oki Semiconductor in Japan, the Company's principal wafer fab since 1985. Other than purchase orders currently open with Xfab, there is no purchasing agreement in place with Xfab. Each purchase order remains open until the wafers are delivered, which is generally within two months of placement of the order, although in the case of one particular wafer design, the purchase order calls for monthly deliveries over a one year period at a set price for each wafer delivered. The prices of wafers purchased from Xfab are determined by periodic negotiations with the management of Xfab and compared to quotes obtained from other prospective wafer fabricators and pricing surveys published by various industry trade organizations. During the nine months ended

January 31, 2002, the Company's purchases from Xfab totaled $769,000. As of January 31, 2002, the total amount owed Xfab was $36,000.

The Company has had an informal arrangement since 1995 to obtain engineering services from Lxi Corporation, a California corporation (Lxi), a provider of engineering services through Essex com SRL (Essex), its wholly owned subsidiary in Romania. Officers of the Company, Messrs. Vanco, Voicu and Gay own approximately 91%, 3% and 1%, respectively, of Lxi. During the month of January 2002, Essex employed the equivalent of approximately 14 full-time engineers to perform the services on behalf of the Company. These services relate to key development projects of the Company including development, design, layout and test program development services. The hourly billing rate for these services have been proposed by the management of Lxi and are reviewed and approved by all members of the Catalyst Board of Directors except Mr. Vanco. The rates charged are compared to the estimated cost of maintaining a similar workforce in Sunnyvale, California and to the rates periodically quoted by other offshore providers of comparable engineering services. The Company does not have any contractual commitment to obtain these services from Lxi, nor does Lxi have any obligation to provide these services to us. During the nine months ended January 31, 2002 the Company recorded $627,000 of engineering fees from Lxi for engineering design services. As of January 31, 2002 the total amount owed to Lxi was $68,000.

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

FORWARD-LOOKING STATEMENTS

This report contains certain forward-looking statements that are subject to risks and uncertainties. For such statements, we desire to take advantage of the "Safe Harbor" provisions of the Private Securities Litigation Reform Act of 1995 and of Section 21E of and Rule 3b-6 under the Securities Exchange Act of 1934. Such forward-looking statements include, without limitation, statements regarding our expectations, intentions or future strategies and involve known and unknown risks, uncertainties and other factors. All forward-looking statements included in this report are based on information available to us on the date of filing, and we assume no obligation to update such forward-looking statements.

OVERVIEW

Catalyst Semiconductor, Inc. (Catalyst, us, we, our), incorporated October 8, 1985, designs, develops and markets nonvolatile memory semiconductor products including Serial and Parallel EEPROMs, Flash memory and Mixed Signal devices. Revenues are derived from sales of semiconductor products designed by us and manufactured by other companies.

Our business is highly cyclical and has been subject to significant downturns at various times which have been characterized by reduced product demand, production overcapacity, and significant erosion of average selling prices. Throughout fiscal 1998 and fiscal 1999, the market for certain FLASH and EEPROM devices, which comprise the majority of our business, experienced an excess market supply relative to demand which resulted in a significant downward trend in prices. During fiscal 2000 and the first half of fiscal 2001, we reduced our manufacturing costs, increased the efficiency of our manufacturing operations and the selling prices for certain of our products increased, contributing to increased gross margin percentages. During the second half of fiscal 2001 and the first nine months of fiscal 2002, we experienced cancellations of orders by our customers, increased supplies of competitive products and decreasing revenues. Although cancellations have diminished from the rate experienced in the last two quarters of fiscal 2001, the results for the nine months ended January 31, 2002 reflect the continuing competitive pressures on our revenues, gross margins and net profits. We could experience increases in our manufacturing costs and further downward trends in product pricing in the future which could adversely affect our operating results.

RESULTS OF OPERATIONS

Revenues. Total revenues consist primarily of net product sales. A substantial portion of net product sales has been made through independent distributors. Revenues from product sales to original equipment manufacturers and from sales to distributors who have no, or limited, product return rights and no price protection rights, are recognized upon shipment net of allowances for estimated returns. When distributors have rights to return products or price protection rights, we defer revenue recognition until the distributor sells the product to the end customer. Total revenues decreased 55% to $10.7 million for the quarter ended January 31, 2002 from $23.6 million for the quarter ended January 31, 2001. The decrease is primarily attributable to a decrease in the average selling prices of our products and increased sales of our lower priced products. In comparison to our previous fiscal quarter, total revenues increased 16% to $10.7 million for the quarter ended January 31, 2002 from $9.2 million for the quarter ended October 31, 2001. The increase is primarily attributable to an increase in the number of units shipped. For the nine months ended January 31, 2002, total revenues decreased 63% to $30.3 million from $80.9 million for the nine months ended January 31, 2001. The decrease is primarily attributable to a decrease in the number of units shipped and, to a lesser degree, to a decrease in the average selling price of our products. For the nine months ended January 31, 2002, approximately 17% of our net product shipments were from our Flash memory product line, compared with 16% of net product shipments during fiscal 2001. The balance of our net product shipments were comprised of our EEPROM products. For the nine months ended January 31, 2002, approximately 65% of our net product shipments were to international customers compared with 60% of net product shipments during fiscal 2001. The increase in the percentage of international shipments is primarily due to continued weakness in the domestic markets for our products. All sales of our products are in US dollars, minimizing the effects of currency fluctuations.

Gross Profit. Gross profit for the quarter ended January 31, 2002 was $3.8 million, or 36% of revenues, compared to a gross profit of $11.0 million, or 47% of revenues, for the quarter ended January 31, 2001, a decrease of 65%. The decrease in gross profit percentage is primarily due to decreased selling prices in the market for our products. In comparison to our previous fiscal quarter, gross profits increased $1.1 million to $3.8 million, or 36% of revenues, for the quarter ended January 31, 2002 from $2.7 million, or 29% of revenues, for the quarter ended October 31, 2001. The increase is primarily attributable to an increase in the number of units shipped. For the nine months ended January 31, 2002, gross profits of $10.5 million, or 35% of revenues decreased by 74% from $40.7 million or 50% of revenues for the nine months ended January 31, 2001. The decrease is primarily attributable to deteriorating market conditions for our products reflected by decreased average selling prices and decreased unit shipments. During fiscal 2001, we paid $10.0 million to our principal wafer supplier, Oki, to obtain increased wafer supplies. Such payments were added to the cost of the inventory acquired during that period and were included in the cost of sales as the inventory was sold. As of April 30, 2001, our inventory valuation included a portion of such costs to be charged to cost of sales as the relevant inventory was later sold. During the quarters ended July 31 and October 31, 2001, we had a lower gross profit attributable to our shipments of the more expensive wafers purchased under the Oki agreement. Our remaining inventory of the more expensive products was charged to cost of sales in the first half of this fiscal year and is no longer included in our inventory valuation. It is our policy to fully reserve all inventory that is not expected to be sold within a reasonable period of time following the balance sheet date, generally within the ensuing twelve months. We pay certain foreign manufacturing expenses in local currency, primarily Baht in Thailand and Yen in Japan. Such expenses not paid in U.S. dollars are not material to us and the majority are paid within 30 days, minimizing the effects of currency fluctuations.

Research and Development. Research and development (R&D) expenses consist principally of salaries for engineering, technical and support personnel, charges from outside providers of engineering services, including services provided by the related party Lxi, depreciation of equipment, and the cost of wafers used to evaluate new products and new versions of current products. R&D expenses decreased by 8% to $1.1 million, or 10% of revenues, for the quarter ended January 31, 2002, from $1.2 million, or 5% of revenues for the quarter ended January 31, 2001. The decrease is primarily caused by lower personnel related expenses. In comparison to our previous fiscal quarter, R&D expenses of $1.1 million, or 10% of revenues, for the quarter ended January 31, 2002 increased $0.1 million from $1.0 million or 11% of revenues for the quarter ended October 31, 2001. The increase is primarily caused by increased expenses for personnel. For the nine months ended January 31, 2002, R&D expenses decreased 3% to $3.2 million, or 11% of revenues, compared to $3.3 million, or 4% of revenues for the nine months ended January 31, 2001. This decrease is primarily attributable to lower personnel related expenses.

Selling, General and Administrative. Selling, general and administrative (SG&A) expenses consist principally of salaries for sales, marketing and administrative personnel, commissions and promotional activities. SG&A expenses decreased by 7% to $2.6 million, or 24% of revenues, for the quarter ended January 31, 2002, from $2.8 million, or 12% of revenues, for the quarter ended January 31, 2001. The decrease from the previous year is primarily attributable to decreased expenses for sales and administrative personnel and decreased commission expenses to outside manufacturers' representatives. In comparison to our previous fiscal quarter, SG&A expenses of $2.6 million for the quarter ended January 31, 2002 decreased 10% from $2.9 million, or 32% of revenues for the quarter ended October 31, 2001. The decrease in SG&A expenses from the previous quarter is primarily attributable to a decrease in the provision for doubtful accounts receivable. For the nine months ended January 31, 2002, SG&A expenses decreased by 15% to $8.3 million, or 27% of revenues, from $9.8 million, or 12% of revenues, for the nine months ended January 31, 2001. The decrease from the

previous year is primarily attributable to decreased commission expenses to outside manufacturers' representatives and decreased expenses for sales and administrative personnel.

Net Interest Income/Expense. Net interest income was $126,000 for the quarter ended January 31, 2002, compared to net interest income of $293,000 for the quarter ended January 31, 2001. The decrease from a year ago is primarily related to the lower interest rate earned on our decreased cash balance compensated by decreased average outstanding borrowings. In comparison to our previous fiscal quarter, net interest income was $126,000 for the quarter ended January 31, 2002, compared to net interest income of $199,000 for the quarter ended October 31, 2001. The decrease from the previous quarter is primarily related to the decrease in the interest rate earned on our cash balance. For the nine months ended January 31, 2002, our net interest income was $589,000, an increase from $484,000 for the nine months ended January 31, 2001. The increase from the previous year is primarily related to our increased cash balance and decreased average outstanding borrowings.

Income Tax Provision. We recorded a provision for income taxes of zero for the quarter ended January 31, 2002, compared to a provision of $370,000 or 5% of net income before taxes for the quarter ended January 31, 2001. The decrease is due to the loss we incurred during the nine month period ended January 31, 2002. We have recorded a provision of $49,000 for the nine months ended January 31, 2002 compared to a provision of $2,470,000 or 9% of net income before taxes for the nine months ended January 31, 2001. The decrease is due to the loss we incurred during the nine month period ended January 31, 2002 compared to the net income of $25.6 million we earned for the nine month period ended January 31, 2001.

CRITICAL ACCOUNTING POLICIES

We believe that the following accounting policies are most important to the portrayal of our financial condition and results and require management's most difficult judgments:

We record inventory reserves for estimated unmarketable inventory equal to the cost of inventory estimated to be in excess based upon assumptions about future demand and market conditions. If actual market conditions are less favorable than those projected by management, additional inventory write-downs may be required. Additional inventory reserves are taken based upon our estimate of the future selling prices of our inventories. Whenever the estimated future selling price is less than the value of any portion of our inventory, a reserve is taken for the amount by which the cost of the inventory exceeds the estimated future selling price. If we overestimate the future selling prices, we will incur additional losses when the inventory is sold for a lower price or when we establish additional reserves to cover the even lower estimated sales price.

We record estimated reductions to revenue for return of products at the time revenue is recognized. If market conditions were to weaken, we may face higher volumes of product returns possibly resulting in an incremental reduction of revenue at the time products are returned. If we were to experience an increased rate of product returns, our sales would be further reduced by the increased reserves taken to cover the increased amount of our products expected to be returned.

We maintain allowances for doubtful accounts for estimated losses resulting from the inability of our customers to make required payments. If the financial condition of our customers were to deteriorate, resulting in an

impairment of their ability to make payments, additional allowances may be required.

We record a valuation allowance to reduce our deferred tax assets to the amount that is more likely than not to be realized. We have considered estimated future taxable income in assessing the need for the valuation allowance, in the event we were to determine that we would be able to realize our deferred tax assets in the future in excess of the net recorded amount, an adjustment to the deferred tax asset would increase income in the period such determination was made. Conversely, should we determine that we would not be able to realize all or part of the net deferred tax asset in the future, an adjustment to the deferred tax asset would be charged to income in the period such determination was made.

LIQUIDITY AND CAPITAL RESOURCES

Net cash provided by operations was $1.3 million for the nine months ended January 31, 2002, which was due primarily to a net loss of $442,000, adjusted for depreciation and amortization of $767,000, an addition to the provision for doubtful accounts of $200,000, an increase in the provision for excess and obsolete inventory of $12,000 and a decrease in accounts payable and other liabilities of $718,000 related to decreased sales and manufacturing activity, a decrease in gross accounts receivable of $2.7 million and an increase in inventories of $1.0 million which were also related to the decreases in our production and sales activity. For the nine month period ended January 31, 2001, net cash of $27.4 million was provided by operations, principally by net income of $25.6 million, adjusted for depreciation and amortization of $765,000, an addition to the provision for doubtful accounts of $214,000, a provision for excess and obsolete inventory of $1.1 million plus $2.9 million from the increase in accounts payable due to the increasing manufacturing activity and $3.8 million from the increase in accrued expenses primarily due to the provision for income taxes and $1.9 million from the increase in deferred gross profit on shipments to distributors. Such increase was partially offset by $3.8 million used by the increase in accounts receivable due to the increased sales activity and $5.5 million used for the increase in inventory.

Our investing activities used $421,000 during the nine months ended January 31, 2002 and were related primarily to the acquisition of equipment for our manufacturing operations. Cash used in investing activities for the nine months ended January 31, 2001 was $1.3 million which was primarily related to the purchase of equipment for our manufacturing operations.

Financing activities used $2.4 million during the nine months ended January 31, 2002, consisting primarily of $2.0 million for the payoff of our bank credit line and $417,000 for the repurchased shares of our common stock. During the nine months ended January 31, 2001, the cash provided by financing activities was $254,000 from the proceeds of stock option exercises.

In September 2001 we announced our intent to implement a stock repurchase program. As a result of this repurchase program, during the quarters ended October 31, 2001 and January 31, 2002, we have repurchased 130,000 and 63,700 shares, respectively, of our common stock at a cost of $262,000 and $155,000, respectively. Stock repurchased at fair market value on the date of each transaction was accounted for at cost.

On June 30, 2001, we paid off the $2.0 million balance due on the line of credit with our bank and ended the agreement. As of January 31, 2002, we had accounts payable to various creditors in the amount of approximately $4.1

million. This amount is comprised of approximately $3.6 million for wafers and inventory processing and approximately $0.5 million for other goods and services.

We do not have any material contractual obligations or commercial commitments to make future payments other than with respect to the facilities lease for our principal business office in Sunnyvale. Further, we do not engage in any off-balance sheet arrangements or transactions.

In light of the current economic and competitive climate, we continue to monitor our liquidity resources. We believe our existing cash and cash equivalents and anticipated cash flows from our operating activities will be sufficient to fund our working capital and capital expenditure needs for at least the next 12 months. In our competitive industry, we must constantly consider the need to make significant capital expenditures in connection with our research and development efforts. We may use cash to invest in businesses, products and/or technologies which we believe to be strategic. However, we have no present commitments or obligations with respect to any material acquisition of other businesses or technology. We have no present intention to seek additional debt or equity financing, but our need to do so is highly dependent upon factors such as the demand for our products and changes in industry and general economic conditions. In the event that we do determine to seek such financing, there can be no assurance that such financing will be available on acceptable terms, if at all, and any additional equity financing could result in incremental dilution to our existing investors.

Effects of Transactions with related parties

During the fourth quarter of fiscal 2000, the Company began taking delivery of wafers fabricated at X-fab Texas, Inc. (Xfab), a wholly owned subsidiary of Elex NV, a Belgian holding company that owns 31.1% of the outstanding shares of the Company as of February 28, 2002. Mr. Roland Duchatelet, the Chairman and CEO of Elex NV, serves as a member of the Company's Board of Directors. The wafers provided by Xfab supplement the same designs fabricated at Oki Semiconductor in Japan, the Company's principal wafer fab since 1985. Other than purchase orders currently open with Xfab, there is no purchasing agreement in place with Xfab. Each purchase order remains open until the wafers are delivered, which is generally within two months of placement of the order, although in the case of one particular wafer design, the purchase order calls for monthly deliveries over a one year period at a set price for each wafer delivered. The prices of wafers purchased from Xfab are determined by periodic negotiations with the management of Xfab and compared to quotes obtained from other prospective wafer fabricators and pricing surveys published by various industry trade organizations. During the nine months ended January 31, 2002, the Company's purchases from Xfab totaled $769,000. As of January 31, 2002, the total amount owed Xfab was $36,000.

The Company has had an informal arrangement since 1995 to obtain engineering services from Lxi Corporation, a California corporation (Lxi), a provider of engineering services through Essex com SRL (Essex), its wholly owned subsidiary in Romania. Officers of the Company, Messrs. Vanco, Voicu and Gay own approximately 91%, 3% and 1%, respectively, of Lxi. As of January 31, 2002, Essex employed the equivalent of approximately 14 full-time engineers to perform the services on behalf of the Company. These services relate to key development projects of the Company including development, design, layout and test program development services. The hourly billing rate for these services have been proposed by the management of Lxi and are reviewed and approved by all members of the Catalyst Board of Directors except Mr. Vanco. The rates charged are compared to the estimated

cost of maintaining a similar workforce in Sunnyvale, California and to the rates periodically quoted by other offshore providers of comparable engineering services. The Company does not have any contractual commitment to obtain these services from Lxi, nor does Lxi have any obligation to provide these services to us. During the nine months ended January 31, 2002 the Company recorded $627,000 of engineering fees from Lxi for engineering design services. As of January 31, 2002 the total amount owed to Lxi was $68,000.

CERTAIN RISKS THAT MAY AFFECT OUR FUTURE RESULTS

OUR QUARTERLY OPERATING RESULTS MAY FLUCTUATE DUE TO MANY FACTORS AND ARE DIFFICULT TO FORECAST.

Our operating results have historically been and in future quarters may be adversely affected or otherwise fluctuate due to factors such as:

- fluctuations in customer demand for our products,
- volatility in supply and demand affecting market prices generally (such as the increases in supply of competitive products and significant declines in average selling prices experienced by us in the five quarters ended January 31, 2002 and during the fiscal years April 30, 1999 and 1998),
- the need to establish additional inventory reserves due to the expected selling prices falling below the amounts paid to purchase and sell certain parts, or if our expectations for sales of our inventory fall below the quantities that we have on hand,
- charges to bad debt expense caused by accounts receivable that become unlikely to be collected in a reasonable amount of time, if ever,
- the timing of new product introductions and significant orders of our products,
- increased expenses associated with new product introductions, process changes and/or expanding our sales channels,
- gains or losses of significant customers,
- fluctuations in manufacturing yields,
- changes in our product mix,
- increases in wafer prices due to increased market demand and other factors,
- prices charged by our suppliers due to increased costs, decreased competition and other factors,
- foreign currency fluctuations, and
- general economic conditions.

We anticipate that a significant portion of our revenue will be derived from a limited number of large orders, and we expect that the timing of receipt and fulfillment of these orders will cause fluctuations which could be material to our operating results, particularly on a quarterly basis.

Our quarterly revenue and operating results are difficult to forecast due to the previously described factors. We base our expense levels, in significant part, on our expectations as to future revenue and our expenses are therefore

relatively fixed in the short term. If our expected revenue levels fall below our forecasts, as has occurred during the most recent four fiscal quarters and during fiscal years ended April 30, 1999 and 1998, net income is likely to be disproportionately adversely affected because a proportionately smaller amount of our expenses vary with our revenue.

THE SEMICONDUCTOR INDUSTRY IS HIGHLY CYCLICAL IN NATURE.

We operate in a highly cyclical industry that has been subject to significant economic downturns often in connection with, or in anticipation of, maturing product cycles and declines in general economic conditions. This type of downturn occurred in calendar years 1997 and 1998 and again during 2001. We currently face and in the future may face diminished product demand, accelerated erosion of average selling prices and gross margins, and production overcapacity during such downturns, which may last for more than a year. Accordingly, we may experience substantial period to period fluctuations in future operating results due to general semiconductor industry conditions, overall economic conditions or other factors.

For example, we experienced accelerated erosion of average selling prices caused by adverse industry-wide conditions during fiscal 1998 and throughout calendar year 1999 and incurred substantial losses during that period. During fiscal 2000, the semiconductor market rebounded from its cyclical decline which had a favorable impact on both our revenues and our gross margins into fiscal 2001 through the quarter ended October 2000. During each of the fiscal quarters ended January 2001, April 2001, July 2001 and October 2001, however, the market for our products became more competitive as a result of increased availability of products when demand was decreasing. Thus we anticipate continued price and other competitive pressures to adversely affect our future operating results similar to the adverse affects on our 1998 and 1999 operating results.

Our continued success depends in large part on the continued growth of various electronics industries that use semiconductors. The improved market conditions we experienced in calendar year 1999 and the first ten months of calendar year 2000 have declined significantly. During the latter half of the fiscal year ended April 30, 2001 and in the first half of fiscal 2002, we experienced decreases in orders from customers and found that lower selling prices were necessary to remain competitive in the market. During the last two months of calendar 2000 and the first ten months of calendar 2001, we experienced decreases in the number of units sold and the unit selling prices, which we believe to be indicative of a downturn in our industry. We expect that trend to continue further into fiscal 2002. We attempt to identify changes in market conditions as soon as possible; however, market dynamics make our prediction of and timely reaction to such events difficult. Our business could be harmed in the future by additional cyclical downturns in the semiconductor industry or by slower growth by any of the markets served by our customers' products.

GENERAL ECONOMIC CONDITIONS MAY REDUCE OUR REVENUES AND HARM OUR BUSINESS.

As our business grows, we have become increasingly subject to the risks arising from adverse changes in domestic and global economic conditions. Because of the recent worldwide economic slowdown, and in the United States of America in particular, many industries are delaying or reducing technology purchases. The impact of this slowdown on us is difficult to predict, but it may result in reductions in purchases of our products by our customers, longer sales cycles and increased price competition. As a result, if the current economic slowdown

continues or worsens, we may fall short of our revenue expectations for any given quarter in fiscal 2002 or for the entire year. These conditions would negatively affect our business, financial condition and results of operations.

IF OUR PRODUCTS FAIL TO KEEP PACE WITH THE RAPID TECHNOLOGICAL CHANGES IN THE SEMICONDUCTOR INDUSTRY, WE COULD LOSE CUSTOMERS AND REVENUE.

Our product markets are characterized by rapidly changing technology and product obsolescence. A key factor to our business success is the timely introduction of new products at competitive price and performance levels. In particular, our future success will depend on our ability to develop and implement new design and process technologies which enable us to achieve higher product densities and thereby reduce product costs. For example, most of our products are currently designed and manufactured using a 0.8 micron CMOS EEPROM process or a 0.6 micron Flash memory process. We may not be able to select and develop new products and technologies and introduce them to the market in a timely manner and with acceptable fabrication yields and production costs. Furthermore, our products may not achieve market acceptance. Our failure to complete and introduce new products at competitive price/performance levels could materially and adversely affect our business, financial condition and operating results. Our business, financial condition and results of operations could be materially adversely affected by delays in developing new products, achievement of volume production of new products, successful completion of

technology transitions with acceptable yields and reliability, or the lack of commercial acceptance of new products we introduce to the market.

WE DEPEND ON A SMALL NUMBER OF SUPPLIERS FOR THE SUPPLY OF WAFERS.

We do not manufacture the semiconductor wafers used for our products. Oki Electric Industry, Co., Ltd. (Oki) in Japan has supplied wafers to us since 1987 and was our sole foundry source until the quarter ended April 30, 2000. At that time, an additional foundry, Xfab, began to provide a limited number of products to us and the volumes currently provided by Xfab are considerably less than Oki currently provides. We do not presently have a wafer supply agreement with Xfab and instead purchase wafers on a purchase order and acceptance basis. Our almost exclusive reliance on these independent foundries involves a number of risks, including:

- the risk of inadequate wafer supplies to meet our production needs,
- increased prices charged by such independent foundries,
- the unavailability of or interruption in access to required or more cost effective process technologies,
- reduced control over delivery schedules, manufacturing yields and costs, and
- the risks associated with international operations more fully described below.

We are not always able to obtain sufficient increased quantities of wafers from Oki to fulfill some of the current customer demand. Although we have a wafer purchase agreement with UMC for certain Flash products which runs through February 2006, due to declining Flash bookings and other circumstances, we have not ordered any wafers from UMC since December 1997.

On September 6, 2000, we announced an agreement with Oki that resulted in

a significant increase in foundry capacity available to us for the one year period that commenced in September 2000 in return for two payments totaling $10.0 million. These payments were added to the cost of inventories purchased during the ten month period ended March 2001 and were reflected in our cost of sales as the associated inventory was sold. As of April 30, 2001, our inventory valuation included a portion of such costs to be charged to cost of sales as the relevant inventory is sold. During the quarters ended July 31 and October 31, 2001, we had a lower gross profit caused by our shipments of the more expensive wafers purchased under the Oki agreement. The remaining inventory of the more expensive products was included in our cost of sales in the quarter ended October 31, 2001.

To address our wafer supply concerns, we plan to continue working on expanding our primary foundry capability at Oki and our secondary foundry capability with Xfab at its facility in Lubbock, Texas. Xfab is owned by Elex NV which is a 31.1% stockholder of the Company as of February 28, 2002 and Mr. Roland Duchatelet, the chairman and CEO of Elex NV, serves as a member of our Board of Directors. The addition of Xfab as a second foundry source has enabled us to reduce the risks associated with the sourcing and quantity of our wafer supply and thereby improve control over an important component of our business; however, sufficient capacity may not be available from Xfab. Additionally, Oki may not continue to provide sufficient capacity in the future and that capacity may not be available from another manufacturer at prices acceptable to us. Even if such capacity is available, the qualification process and time required to make the foundry fully operational for us could take many months, or longer, and be subject to other factors described below. Our business, financial condition and results of operations could be materially adversely affected by:

- the loss of Oki or Xfab as a supplier,

- our inability to obtain additional capacity at Oki or Xfab,

- our inability to qualify Xfab for additional products,

- our ability to qualify other wafer manufacturers for desired foundry capacity, or

- any other circumstances causing a significant interruption in our supply of semiconductor wafers.

WE HAVE INCURRED SIGNIFICANT LOSSES OR EXPERIENCED SIGNIFICANT NEGATIVE CASH FLOW FROM OPERATIONS DURING SEVERAL RECENT FISCAL YEARS.

We have incurred significant losses or experienced significant negative cash flow from operations during several recent fiscal years. Such negative cash flow during fiscal 1999 and 1998 significantly reduced our available capital. During fiscal 1999, we successfully took steps to address and/or resolve issues relating to our poor cash flow position. During the nine months ended January 31, 2002, we incurred a loss of $442,000 and cash on hand decreased by $1.5 million. Although as of January 31, 2002, we had cash on hand of $29.0 million, we may not continue to generate sufficient revenue and profits to fund our operations. We have pursued many measures designed to reduce expenses and conserve our cash in prior periods when we experienced decreased or negative cash flow and we continue to monitor expenses and to conserve our available cash. Furthermore, to the extent we suffer any adverse effects to our revenues or margins because of delays in new product introductions, price competition or other competitive factors, our cash position and our business, operating results and financial condition will be adversely affected.

We may seek additional equity or debt financing to address our working capital needs and to provide funding for capital expenditures. Additional funding may not be available at acceptable terms, if at all. If we are successful in raising additional funds through the issuance of equity securities, our existing stockholders could experience significant dilution or the securities may have rights, preferences or privileges senior to those of our common stock. If adequate funds are not available to us or are not available on acceptable terms, further reductions in our operating expenses and capital expenditures may be required to continue operations, either of which could have a material adverse effect on our business, operating results and financial condition.

THE TRADING PRICE OF OUR COMMON STOCK COULD BE SUBJECT TO WIDE FLUCTUATIONS IN RESPONSE TO A VARIETY OF FACTORS.

Our stock price has been and may continue to be subject to significant volatility. Any shortfall in revenues or earnings from levels expected or projected by investors or others could have an immediate and significant adverse effect on the trading price of our common stock in any given period. In addition, the stock market in general has experienced extreme price and volume fluctuations particularly affecting the market prices for many high technology companies and small capitalization companies, and these fluctuations have often been unrelated to the operating performance of the specific companies. These broad fluctuations may adversely affect the market price for our common stock.

THE MANUFACTURE OF SEMICONDUCTOR WAFERS IS HIGHLY COMPLEX AND SENSITIVE TO A WIDE VARIETY OF FACTORS THAT MAY ADVERSELY AFFECT OUR ABILITY TO GENERATE FUTURE REVENUES.

The manufacture of semiconductor wafers for our products is highly complex and sensitive to a wide variety of factors typical in the semiconductor industry such as:

- lower than anticipated production yields experienced by outside wafer foundries from time to time,

- incurring the time and expense to develop alternative foundry sources,

- experiencing substandard yield during the initial developmental stages of a new process,

- inability to receive sufficient quantities of wafers at favorable prices on a timely basis, especially in periods of increased demand,

- material disruptions in the supply of wafers as a result of low manufacturing yield or other manufacturing problems, and

- production transition delays.

Our ability to generate future revenues may be adversely affected by such delays and reductions that result in the cancellation of customer orders. Thus, any of the following events could delay shipments, result in the loss of customers and have a material adverse effect on our business and operating results:

- the loss of Oki or Xfab as a supplier,

- the failure to further develop Xfab as a reliable foundry in an expeditious and cost-effective manner,

- any prolonged inability to obtain adequate yields or deliveries from Oki or Xfab, and

- any other circumstance that would require us to seek and qualify alternative sources of supply of such products.

Although we are exploring and seeking to develop alternative wafer supply sources such as Xfab, we may not be able to obtain such alternative sources nor may we have adequate facilities available. Failure to have such supplies available would have a material adverse effect on our business, financial condition and results of operations.

INTENSE COMPETITION IN OUR MARKETS MAY LEAD TO REDUCED AVERAGE SELLING PRICES OF OUR PRODUCTS, REDUCED SALES OF OUR PRODUCTS AND REDUCED GROSS MARGINS.

The semiconductor industry is intensely competitive and has been characterized by rapid price erosion, declining gross margins, rapid technological change, product obsolescence and heightened international competition in many markets. Average selling prices in the semiconductor industry generally, and for our products in particular, have decreased significantly and rapidly over the life of each product. We expect that average selling prices for our existing products will decline rapidly in the future and that average selling prices for each new product will decline significantly over the life of the product. Declines in average selling prices for our products, if not offset by reductions in the cost of producing those products or by sales of new products with higher gross margins, would decrease our overall gross margins, could cause a negative adjustment to the valuation of our inventories and could materially and adversely affect our operating results.

We compete with major domestic and international semiconductor companies, many of which have substantially greater financial, technical, sales, marketing, production, distribution and other resources. We may not be able to compete successfully in the future. Our more mature products, such as Serial and Parallel EEPROM devices, compete on the basis of product performance, price and customer service. We believe that we compete successfully with respect to each of these factors; however price competition is significant and expected to continue. Principal competitors with respect to our EEPROM products currently include STMicroelectronics, Atmel, Microchip, Fairchild Semiconductor and Xicor, all of which have substantially greater resources than us.

The market for Flash memory products has been characterized by long production cycles, irregular yields, competing technologies and, particularly since the first quarter of fiscal 1997, intense price competition resulting in major reductions in average selling prices and corresponding reductions in margins. Our Flash memory products compete on the basis of product performance, price and customer service. However, given the development of higher density/lower cost products and the intense price competition prevalent for these products, we may not be able to compete successfully in the future against its competitors on the bases of these or other competitive factors.

WE PERIODICALLY EXPERIENCE AN OVERSUPPLY OR SHORTAGE OF WAFER FABRICATION CAPACITY DUE TO VOLATILE DEMAND AND THUS WE RISK FORECASTING INCORRECTLY AND PRODUCING EXCESS OR INSUFFICIENT INVENTORIES OF PARTICULAR PRODUCTS, WHICH MAY ADVERSELY AFFECT OUR RESULTS.

We have previously experienced periodic oversupply or shortages of wafer fabrication capacity due to the cyclical nature of the semiconductor industry. Since we must order products and build inventory substantially in advance of product shipments, we risk forecasting incorrectly and producing excess or insufficient inventories of particular products. Demand for our products is

volatile and customers often place orders with short lead times. The ability of our customers to reschedule or cancel orders without significant penalty could adversely affect our liquidity, as we may be unable to adjust our purchases from our wafer suppliers to match any customer changes and cancellations. Our inventory may not be reduced by the fulfillment of customer orders and in the future we may produce excess quantities of our products. To the extent we produce excess inventories of particular products, our operating results could be adversely affected by charges that we could recognize due to significant reductions in demand for our products and/or rapid declines in the market value of inventory, resulting in inventory writedowns or other related factors.

For example, during the last half of fiscal 1998, we recorded charges of approximately $7.5 million due to the rapid decrease in demand for and the selling prices of our products. Such adjustments amounted to less than $0.5 million in fiscal 1999 and were not material in fiscal 2000. Inventory reserve adjustments in fiscal 2001 totaled $4.7 million which were partially offset by the release of $2.0 million of inventory reserves taken in previous periods relating to products that were sold during fiscal 2001. For the nine months ended January 2002, we reserved

18

inventory of $0.3 million which was offset by the release of $0.3 million of inventory reserves taken in previous periods relating to products that were sold during the quarter.

In addition, in fiscal 1998 and to some extent during fiscal 2001, our ability to forecast future demand and selling prices diminished. It is our policy to fully reserve all inventory that we do not expect to be sold in a reasonable period of time from the balance sheet date, generally within the ensuing twelve months. During most of our recent fiscal periods, as a result of a reductions in estimated demand for our various products, we have provided additional reserves for excess quantities and obsolescence for certain products, primarily our Flash and EEPROM products. In fiscal 1998, the rapid erosion of selling prices also left us with significant amounts of inventory with a carrying value that exceeded its current selling price resulting in adjustments to the carrying value of the inventory to the lower of cost or market value. We may suffer similar reductions in values of our inventories in the future and we may be unable to liquidate our inventory at acceptable prices.

WE MAY NOT BE ABLE TO SUSTAIN MARKET ACCEPTANCE FOR OUR FLASH MEMORY PRODUCTS.

A significant amount of our net revenues have been and continue to be derived from sales of Flash memory products. Flash memory products represented 17% of our shipments during the nine months ended January 31, 2002 and represented 16%, 18% and 25% of our shipments, respectively, in each of fiscal years 2001, 2000 and 1999. The market for Flash memory products has been characterized by intense price competition, long production cycles, inconsistent yields, competing technologies, rapidly declining average selling prices, declines in gross margins and intense overall competition. Our operating results in fiscal 1999 and 1998 were adversely affected by intense price competition caused by increased supplies of products and other adverse industry-wide conditions. Intel and other competitors (which include Advanced Micro Devices, Atmel, Fujitsu, Hitachi, Micron, Mitsubishi, STMicroelectronics, Sharp, Texas Instruments and Toshiba) are expected to further increase Flash memory production. Most of these competitors are manufacturing and selling devices with larger memories which are utilized in more recently developed products such as digital cameras. Due to intense competition, limited development resources and other factors, we have decided not to develop any of the higher density Flash memory devices at this time. We may not be able to sustain the market acceptance

for our Flash memory products. We anticipate continued price and other competitive pressures, which adversely affected fiscal 1998 and 1999 operating results, to adversely affect our future operating results.

WE RELY ON OUTSIDE PROVIDERS OF ENGINEERING SERVICES AND THE LOSS OF THESE SERVICES MAY CAUSE A SIGNIFICANT INTERRUPTION IN OUR SUPPLY OF ENGINEERING RESOURCES.

To supplement our limited engineering staff dedicated to product research and development activities, we utilize the services of various outside semiconductor design services. The most significant is an informal arrangement we have had in place since 1995 to obtain engineering services from Lxi Corporation (Lxi) of which our officers Messrs. Vanco, Voicu and Gay own approximately 91%, 3% and 1%, respectively. Lxi provides these services through Essex com SRL (Essex), its wholly owned subsidiary in Romania. The aggregate number of hours of engineering services provided to us varies by quarter. During the month of January 2002, Essex employed the equivalent of approximately 14 full-time engineers to perform services relating to key development projects including development, design, layout and test program development services. Because we do not have a formal contractual arrangement with Lxi, Lxi is not obligated to perform these services. There is no guarantee that Lxi will continue to supply a sufficient number of engineers to fulfill our requirements for outsourced engineering services and we may not be able to procure engineering services from an additional source in a timely manner or at comparable rates. Our business, financial condition and results of operations could be materially adversely affected by the loss of Lxi as a supplier of outsourced engineering services and, to a lesser extent, the loss of our other providers of outsourced engineering services, our inability to obtain a comparable new supplier of such services, or any other circumstances causing a significant interruption in our supply of engineering resources. See also note 7 -- "Related Party Transactions" contained in Item 1 of this report on Form 10-Q for additional information regarding our relationship with Lxi.

WE RELY ON THIRD-PARTY SUBCONTRACTORS TO SORT, ASSEMBLE, TEST AND SHIP OUR PRODUCTS TO CUSTOMERS.

We outsource portions of our planning, finish work and test functions for certain products, as well as our inventory management (shipping and receiving) function to subcontractors who are primarily located in Thailand

and The Philippines. This reliance on third parties subjects us to risks such as reduced control over delivery schedules and quality, a potential lack of adequate capacity during periods when demand is high and potential increases in product costs due to factors outside our control such as capacity shortages. Such risks could lead to delays in product deliveries, lost sales and increased costs which could harm our customer relationships and result in lower profitability.

INTERNATIONAL SALES COMPRISE A SIGNIFICANT PORTION OF OUR PRODUCT SALES, WHICH EXPOSES US TO FOREIGN POLITICAL AND ECONOMIC RISKS.

For the nine months ended January 31, 2002, international sales comprised 65% of our product sales. Additionally, for fiscal 2001, 2000 and 1999, international sales accounted for approximately 60%, 61% and 45%, respectively, of our product sales. The lower percentage in international sales in 1999 was primarily attributable to the transition in Japan from Marubun Corporation, our former distributor which resigned in fiscal 1998, to various smaller alternative distributors that serve similar markets and our inability to compete with the

low selling prices in certain Far East markets. In fiscal 2000, we were able to reenter certain Far East markets, contributing to the increased international sales. We expect that international sales will continue to represent a significant portion of our product sales in the future. However, our international operations may be adversely affected by the following factors:

- greater fluctuations in demand due to the increased sensitivity to pricing changes in certain markets, particularly the Far East,
- fluctuations in exchange rates,
- imposition of government controls,
- political and financial instability,
- trade restrictions,
- changes in regulatory requirements,
- difficulties in staffing international operations and
- longer payment cycles.

Currently, all our sales are invoiced and paid in dollars, reducing our direct exposure to currency fluctuations. Recently, several customers in Europe have requested that we develop the ability to invoice them in Euros. Except for Yoshikawa Semiconductor in Japan, a provider of wafer sorting services, and certain contract personnel costs and incidental manufacturing supply purchases in Thailand, over 98% of our purchases are in US dollars, minimizing any direct currency fluctuation risk. In addition, our business is subject to other risks generally associated with doing business with foreign subcontractors including, but not limited to foreign government regulations and political and financial unrest which may cause disruptions or delays in shipments to our customers or access to our inventories. Our business, financial condition and results of operations may be materially adversely affected by these or other factors related to our international operations.

A RELATIVELY SMALL NUMBER OF CUSTOMERS HAVE ACCOUNTED FOR A SIGNIFICANT PORTION OF OUR NET REVENUE IN THE PAST AND THE LOSS OF ONE OR MORE OF OUR CURRENT CUSTOMERS, ADDITIONAL VOLUME PRICING ARRANGEMENTS OR AN EARLY TERMINATION OR DELAY IN SHIPMENTS CAN AFFECT OUR RESULTS ADVERSELY.

A relatively small number of customers have accounted for a significant portion of our net revenue in the past. For the nine months ended January 31, 2002, no single customer represented more than ten percent of our revenues. For the fiscal year ended April 30, 2001, shipments to Future Electronics, Inc., a worldwide distributor, represented 14% of our revenues. For the fiscal year ended April 30, 2000, shipments to Memec (Asia Pacific) Ltd., a distributor in Asia, Future Electronics, Inc. and Yosun Industrial Corp., a reseller located in Taiwan, each represented more than 10% of our revenues (13%, 12% and 11% respectively). During the fiscal year ended April 30, 1999, no customer represented more than 10% of our product revenue.

In addition, we have experienced and may continue to experience lower margins on sales to significant customers as a result of volume pricing arrangements. We also do not typically enter into long-term contracts with

our customers and we cannot be certain as to future order levels from our

customers. When we do enter into a long-term contact, the contract is generally terminable at the convenience of the customer and it may be difficult to replace that revenue source in the short-term upon cancellation.

Our business, operating results and financial condition could be materially adversely affected by the loss of one or more of our current customers, additional volume pricing arrangements, an early termination or delay in shipments by one of our major customers.

WE HAVE BEEN UNABLE TO FULFILL ALL OUR CUSTOMERS' ORDERS ACCORDING TO THE SCHEDULE ORIGINALLY REQUESTED DUE TO THE CONSTRAINTS IN OUR WAFER SUPPLY.

Due to the constraints in our wafer supply, from time to time we have been unable to fulfill all our customers' orders according to the schedule originally requested. Although we are striving to increase our supply of wafers and communicate to our customers the scheduled delivery dates that we believe that we can reasonably expect to meet, our customers may not accept the alternative delivery date or may seek to cancel their outstanding orders. Our operating results have historically been and in future quarters may be adversely affected or otherwise fluctuate due to factors such as timing of new product introductions and announcements by us and our competitors, fluctuations in customer demand for our products, volatility in supply and demand affecting market prices generally (such as the increases in supply of competitive products and significant declines in average selling prices experienced by us in recent fiscal years).

WE RELY UPON OUR INTELLECTUAL PROPERTY AND PROPRIETARY TECHNOLOGY AND MAY RECEIVE NOTICES FROM TIME TO TIME THAT ALLEGE WE HAVE INFRINGED THE INTELLECTUAL PROPERTY RIGHTS OF OTHERS.

In the semiconductor industry, companies place extensive reliance upon their intellectual property and proprietary technology and it is typical for companies to receive notices from time to time that allege infringement of patents or other intellectual property rights of others. For example, we were served with a Complaint alleging that we are infringing the intellectual property rights of Xicor, Inc., a maker of nonvolatile memory products. We have answered the Complaint denying the allegations. We may receive other notices and/or become a party to proceedings alleging our infringement of intellectual property rights in the future. Such claims, if successful, could require us to pay royalties on previous sales of the products which are alleged to infringe. Additionally, in such event, we may not be able to obtain any required licenses of third party intellectual property rights or be able to obtain such licenses on commercially reasonable terms. Failure to obtain such a license in any event could require us to cease production of our products until we develop a non-infringing design or process. Our business, financial condition and results of operations could be materially adversely affected by the cost of litigation of any such claim or resulting damage award. Please see Note 6 -- "Contingencies" contained in Item 1 of this Report on Form 10-Q and "Item 3. Legal Proceedings" in our Report on Form 10-K for the fiscal year ended April 30, 2001 as filed with the SEC on July 26, 2001 for additional information.

OUR SECURITIES ARE TRADED IN A LIMITED MARKET.

Our common stock was traded on the NASDAQ National Market from May 1993 until it was delisted in August 1998 for sustained trading below the minimum level of $1.00 per share required by the NASDAQ stock exchange for continued listing. Our stock was traded on the Over-The-Counter Bulletin Board market until September 6, 2000 when we were re-listed on the NASDAQ SmallCap Market. The over-the-counter market was generally less visible to investors and therefore we were unable to meet the liquidity requirements of some major commercial, institutional and private investors thus limiting the market for our securities. We submitted a request on October 16, 2000 that our securities be

listed on the National Market, but due to general market and other conditions, our stock subsequently closed below the $5.00 price per share which is required to qualify for National Market listing and NASDAQ closed the listing application. We intend to reapply for NASDAQ National Market listing if and when our shares trade for an extended period above the $5.00 level, but we are unable to ascertain the amount of time NASDAQ will take to consider such application, if NASDAQ will reply favorably to such application or, if additional information is requested, how much time and effort will be required on our part to adequately demonstrate and verify our qualifications.

OUR BACKLOG MAY NOT RESULT IN FUTURE REVENUE, WHICH MAY ADVERSELY AFFECT OUR BUSINESS.

Due to possible customer changes in delivery schedules and cancellations of orders, our backlog at any particular date is not necessarily indicative of actual sales for any succeeding period. A reduction of backlog during any particular period or the failure of our backlog to result in future revenue could harm our business.

OUR ABILITY TO OPERATE SUCCESSFULLY DEPENDS UPON THE CONTINUED SERVICE OF CERTAIN KEY EMPLOYEES AND THE CONTINUED ABILITY TO ATTRACT AND RETAIN ADDITIONAL HIGHLY QUALIFIED PERSONNEL.

Our ability to operate successfully will depend, to a large extent, upon the continued service of certain key employees, and the continued ability to attract and retain additional highly qualified personnel. Competition for such personnel, particularly for highly skilled design, process and test engineers, is intense and we may not be able to retain such personnel or attract other highly qualified personnel. Our business, financial condition and results of operations could be materially adversely affected by the loss of or failure to attract and retain any such highly qualified personnel.

WE DEPEND ON MANUFACTURERS' REPRESENTATIVES AND DISTRIBUTORS TO DISTRIBUTE OUR PRODUCTS.

We market and distribute our products primarily through manufacturers' representatives and independent distributors. Our distributors typically offer competing products. The distribution channels have been characterized by rapid change, including consolidations and financial difficulties. Our operating results could be materially adversely affected by the loss of one or more manufacturers' representatives or distributors, or the decision by one or more distributors to reduce the number of our products offered by such distributors or to carry the product lines of our competitors.

OUR OPERATIONS COULD BE HARMED BY EARTHQUAKES AND OTHER NATURAL DISASTERS.

Our corporate headquarters are located in California near major earthquake faults. Additionally, our principal wafer supplier, Oki, is located in Japan which is also subject to the risk of business disruption by earthquakes. Our operations could be harmed in the event of a major earthquake or other natural disaster near our headquarters or other key areas of the world.

WE MAY NOT CARRY ADEQUATE INSURANCE COVERAGE TO PROTECT OUR BUSINESS FROM CERTAIN TYPES OF LOSS.

Although we carry general comprehensive liability insurance, directors and officers liability insurance and other types of insurance coverages typical for most publicly-traded companies, the insurance coverage we retain may not

cover the specific damages that we incur. For example, we do not carry earthquake insurance coverage and our commercial coverage does not include protection for lost profits. Consequently, our business may not be protected if we incur losses of a type for which we do not retain coverage. Additionally, disputes with our carriers regarding policy coverages might occur which could mean that we would be unable to recover all of our damages in the event of a loss. Such occurrences could negatively affect our business, financial condition and results of operations.

A CHANGE OF CONTROL MAY BE DELAYED BY RESISTIVE MEASURES ADOPTED BY US.

Our Stockholder Rights Plan, which provides stockholders with certain rights to acquire shares of common stock in the event a third party acquires more than 15% of our stock, our Board's ability to issue "blank check" Preferred Stock without stockholder approval and our staggered terms for our directors, could have the effect of delaying or preventing a change in control of us.

WE MAY NOT BE ABLE TO EXPAND OUR PROPRIETARY TECHNOLOGY IF WE DO NOT CONSUMMATE POTENTIAL ACQUISITIONS OR INVESTMENTS OR SUCCESSFULLY INTEGRATE THEM WITH OUR BUSINESS.

To expand our proprietary technologies, we may acquire or make investments in complementary businesses, technologies or products if appropriate opportunities arise. We may be unable to identify suitable acquisition or investment candidates at reasonable prices or on reasonable terms, or consummate future acquisition or investment candidates at reasonable prices or on reasonable terms, or consummate future acquisitions or

investments, each of which could slow our growth strategy. We may have difficulty integrating the acquired products, personnel or technologies of any acquisition we might make. These difficulties could disrupt our ongoing business, distract our management and employees and increase our expenses.

WE RELY ON A CONTINUOUS POWER SUPPLY TO CONDUCT OUR OPERATIONS, AND THE CURRENT ENERGY CRISIS COULD DISRUPT OUR OPERATIONS AND INCREASE OUR EXPENSES.

California has recently experienced an energy crisis that could disrupt our operations and increase our expenses. In the event of an acute power shortage, that is, when power reserves for the State of California fall below 1.5%, California has on some occasions implemented, and may in the future continue to implement, rolling blackouts throughout the state, with or without advance notice. If blackouts interrupt our power supply, we may be temporarily unable to operate. Any such interruption in our ability to continue operations could delay the development of our products. Future interruptions could damage our reputation, harm our ability to promote our products and could result in lost revenue, any of which could substantially harm our business and results of operations. In addition, we do not carry sufficient business interruption insurance to compensate us for losses that may occur and any losses or damages incurred by us could have a material adverse effect on our business, financial condition and results of operations.

Furthermore, the deregulation of the energy industry instituted in 1996 by the California government and shortages in wholesale electricity supplies have caused power prices to increase dramatically, and these prices will likely continue to increase or the foreseeable future. If wholesale prices continue to increase, our operating expenses will likely increase, as our headquarters and most of our employees are based in California.

RECENTLY ISSUED ACCOUNTING STANDARDS.

In July 2001, the Financial Accounting Standards Board (FASB) issued SFAS No. 141, "Business Combinations" and SFAS No. 142, "Goodwill and Other Intangible Assets". SFAS No. 141 requires that business combinations initiated after June 30, 2001 be accounted for under the purchase method of accounting. The use of the pooling-of-interest method of accounting is no longer allowed. SFAS No. 142 requires that goodwill and other intangible assets will no longer be amortized but shall be reviewed and tested annually for impairment. SFAS No. 142 will be effective for fiscal years beginning after December 15, 2001, and early adoption is permitted for companies with a fiscal beginning after March 15, 2001. We expect that the adoption of SFAS Nos. 141 and 142 on May 1, 2002 will not have a material effect on our financial statements.

In August 2001, the FASB issued SFAS No. 144, "Accounting for the Impairment of Long-Lived Assets" which was effective January 1, 2002. SFAS No. 144 supersedes FASB Statement No. 121, "Accounting for the Impairment of Long-Lived Assets and for Long-Lived Assets to Be Disposed Of," and the accounting and reporting provisions relating to the disposal of a segment of a business of Accounting Principles Board Opinion No. 30. SFAS No. 144 retains many of the fundamental provisions of SFAS No. 121 and expands the scope of discontinued operations to include more disposal transactions. The adoption of SFAS No. 144 did not have a material effect on our financial statements.

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

Interest Rate Risk. We do not use derivative financial instruments in our investment portfolio. Our investment portfolio is generally comprised of cash deposits. Our policy is to place these investments in instruments that meet high credit quality standards. These securities are subject to interest rate risk, and could decline in value if interest rates fluctuate. Due to the short duration and conservative nature of our investment portfolio, we do not expect any material loss with respect to our investment portfolio.

Foreign Currency Exchange Rate Risk. The majority of our sales and costs of manufacturing and marketing are transacted in US dollars. Accordingly, our results of operations are not subject to foreign exchange rate fluctuations. Gains and losses from such fluctuations have not been incurred by us to date.

PART II -- OTHER INFORMATION

ITEM 6. EXHIBITS AND REPORTS ON FORM 8-K

(a) EXHIBITS:

None.

(b) REPORTS ON FORM 8-K:

No reports on Form 8-K were filed by Catalyst during the three months ended January 31, 2002.

CATALYST SEMICONDUCTOR, INC.

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the undersigned thereunto duly authorized, in the City of Sunnyvale and State of California.
