INTEL CORPORATION

NOTES TO CONSOLIDATED CONDENSED FINANCIAL STATEMENTS Unaudited

Note 1: Basis of Presentation

We prepared our interim consolidated condensed financial statements that accompany these notes in conformity with U.S. generally accepted accounting principles, consistent in all material respects with those applied in our Annual Report on Form 10-K for the year ended December 30, 2006. We have made estimates and judgments affecting the amounts reported in these financial statements and the accompanying notes. Our actual results may differ from these estimates. The accounting estimates requiring our most significant, difficult, and subjective judgments include:

the valuation of non-marketable equity investments;

the recognition and measurement of current and deferred income tax assets and liabilities;

the assessment of recoverability of long-lived assets;

the valuation of inventory; and

the valuation and recognition of share-based compensation.

The interim financial information is unaudited, but reflects all normal adjustments that are, in our opinion, necessary to provide a fair statement of results for the interim periods presented. This interim information should be read with the consolidated financial statements in our Annual Report on Form 10-K for the year ended December 30, 2006. We reclassified certain amounts reported in previous periods to conform to the current presentation.

Note 2: Recent Accounting Pronouncements

In September 2006, the Financial Accounting Standards Board (FASB) issued Statement of Financial Accounting Standards (SFAS) No. 157, *Fair Value Measurements* (SFAS No. 157). SFAS No. 157 defines fair value, establishes a framework for measuring fair value, and enhances fair value measurement disclosure. The measurement and disclosure requirements are effective for us beginning in the first quarter of fiscal 2008. We are currently evaluating the impact of SFAS No. 157.

In February 2007, the FASB issued SFAS No. 159, *The Fair Value Option for Financial Assets and Financial Liabilities* (SFAS No. 159). SFAS No. 159 permits companies to choose to measure certain financial instruments and other items at fair value. The standard requires that unrealized gains and losses are reported in earnings for items measured using the fair value option. SFAS No. 159 is effective for us beginning in the first quarter of fiscal year 2008. Currently, we do not believe that the adoption of SFAS No. 159 will have a significant impact on our consolidated financial statements.

In June 2007, the FASB ratified Emerging Issues Task Force (EITF) Issue No. 07-3, *Accounting for Nonrefundable Advance Payments for Goods or Services to Be Used in Future Research and Development Activities* (EITF 07-3). EITF 07-3 requires non-refundable advance payments for goods and services to be used in future research and development activities to be recorded as an asset and expensing the payments when the research and development activities are performed. EITF 07-3 applies prospectively for new contractual arrangements entered into in fiscal years beginning after December 15, 2007. We currently recognize these non-refundable advanced payments as an expense upon payment. The adoption of EITF 07-3 is not expected to have a significant impact on our consolidated financial statements or financial position.

Note 3: Accounting Changes

In the first quarter of 2007, we adopted Emerging Issues Task Force Issue No. 06-2, *Accounting for Sabbatical Leave and Other Similar Benefits Pursuant to FASB Statement No. 43* (EITF 06-2). EITF 06-2 requires companies to accrue the cost of these compensated absences over the service period. We adopted EITF 06-2 through a cumulative-effect adjustment, resulting in an additional liability of \$280 million, additional deferred tax assets of \$99 million, and a reduction to retained earnings of \$181 million at the beginning of the first quarter of 2007.

We also adopted FASB Interpretation No. 48, *Accounting for Uncertainty in Income Taxes* an interpretation of FASB Statement No. 109 (FIN 48), and related guidance in the first quarter of 2007. See Note 15: Taxes for further

discussion.

INTEL CORPORATION

NOTES TO CONSOLIDATED CONDENSED FINANCIAL STATEMENTS Unaudited (Continued)

Note 4: Employee Equity Incentive Plans

Our equity incentive plans are broad-based, long-term retention programs intended to attract and retain talented employees and align stockholder and employee interests.

In May 2007, stockholders approved an extension of the 2006 Equity Incentive Plan (the 2006 Plan). Stockholders approved 119 million additional shares for issuance, increasing the total shares of common stock available for issuance as equity awards to employees and non-employee directors to 294 million shares. The approval also extended the expiration date of the 2006 Plan to June 2010. In addition, the maximum shares to be awarded as non-vested shares (restricted stock) or non-vested share units (restricted stock units) were increased to 168 million shares. As of June 30, 2007, 235 million shares remain available for grant under the 2006 Equity Incentive Plan.

The 2006 Stock Purchase Plan allows eligible employees to purchase shares of our common stock at 85% of the market price on specific dates. Under the 2006 Stock Purchase Plan, 240 million shares of common stock were made available for issuance through August 2011. As of June 30, 2007, 225 million shares are available for issuance under the 2006 Stock Purchase Plan.

Share-Based Compensation

The following table summarizes the share-based compensation charges:

<u>(In Millions)</u>	Three Months Ended		Six Months Ended	
	June 30, 2007	July 1, 2006	June 30, 2007	July 1, 2006
Cost of sales	\$ 64	\$ 66	\$ 142	\$ 152
Research and development	\$ 94	\$ 126	\$ 208	\$ 261
Marketing, general and administrative	\$ 79	\$ 140	\$ 171	\$ 293

We use the Black-Scholes option pricing model to estimate the fair value of options granted under our equity incentive plans and rights to acquire stock granted under our stock purchase plan. The weighted average estimated values of employee stock option grants and rights granted under the stock purchase plan, as well as the weighted average assumptions used in calculating these values, were based on estimates at the date of grant as follows:

	Stock Options				Stock Purchase Plan ¹	
	Three Months Ended		Six Months Ended		Six Months Ended	
	June 30, 2007	July 1, 2006	June 30, 2007	July 1, 2006	June 30, 2007	July 1, 2006
Estimated values	\$ 5.18	\$ 5.07	\$ 5.24	\$ 5.15	\$ 4.72	\$ 5.02
Expected life (in years)	4.7	4.8	4.9	4.7	0.5	0.5
Risk free interest rate	4.6%	5.0%	4.6%	4.9%	5.3%	4.7%
Volatility	25%	27%	25%	27%	26%	29%
Dividend yield	2.1%	2.0%	2.1%	2.0%	2.1%	1.8%

¹ Under the stock purchase plan, rights to purchase shares are only granted during

*the first and
third quarters
of each year.*

We began issuing restricted stock units in the second quarter of 2006. The estimated fair value of restricted stock unit awards was calculated based on the market price of our common stock on the date of grant, reduced by the present value of dividends expected to be paid on our common stock prior to vesting. The weighted average estimated values of restricted stock unit grants, as well as the weighted average assumptions that were used in calculating fair value, were based on estimates at the date of grant as follows:

Restricted Stock Unit Awards

Information with respect to outstanding restricted stock units as of June 30, 2007 was as follows:

<u>(In Millions, Except Per Share Amounts)</u>	Number of Shares	Weighted Average Grant-Date Fair Value	Aggregate Intrinsic Value¹
---	---------------------------------	---	--

December 30, 2006	27.4	\$	18.71	
Granted	28.3	\$	20.48	
Vested	(5.8)	\$	18.60	\$ 127
Forfeited	(1.6)	\$	19.03	
June 30, 2007	48.3	\$	19.75	

¹ *Represents the value of Intel stock on the date that the restricted stock units vest. The grant date fair value of these vested awards was \$108 million.*

Stock Purchase Plan

Under the 2006 Stock Purchase Plan, employees purchased 15.2 million shares for \$234 million in the first half of 2007 (13.8 million shares for \$245 million in the first half of 2006 under the expired 1976 Stock Participation Plan).

INTEL CORPORATION

NOTES TO CONSOLIDATED CONDENSED FINANCIAL STATEMENTS Unaudited (Continued)

Note 5: Earnings Per Share

The computation of basic and diluted earnings per common share was as follows:

<u>(In Millions, Except Per Share Amounts)</u>	Three Months Ended		Six Months Ended	
	June 30, 2007	July 1, 2006	June 30, 2007	July 1, 2006
Net income	\$ 1,278	\$ 885	\$ 2,914	\$ 2,242
Weighted average common shares outstanding basic	5,809	5,801	5,793	5,827
Dilutive effect of employee equity incentive plans	57	16	51	33
Dilutive effect of convertible debt	51	51	51	51
Weighted average common shares outstanding diluted	5,917	5,868	5,895	5,911
Basic earnings per common share	\$ 0.22	\$ 0.15	\$ 0.50	\$ 0.38
Diluted earnings per common share	\$ 0.22	\$ 0.15	\$ 0.49	\$ 0.38

Basic earnings per common share was computed using net income and the weighted average number of common shares outstanding during the period. Diluted earnings per common share was computed using net income and the weighted average number of common shares outstanding plus potentially dilutive common shares outstanding during the period. Potentially dilutive common shares include the assumed exercise of outstanding stock options, assumed vesting of outstanding restricted stock units, and assumed issuance of stock under the stock purchase plan using the treasury stock method, as well as the assumed conversion of debt using the if-converted method.

For the second quarter of 2007, we excluded 538 million outstanding stock options (552 million for the first half of 2007) from the calculation of diluted earnings per common share because the exercise prices of these stock options were greater than or equal to the average market value of the common shares (777 million for the second quarter of 2006 and 678 million for the first half of 2006). These options could be included in future calculations if the average market value of the common shares increases and becomes greater than the exercise price of these options.

Note 6: Common Stock Repurchase Program

During the second quarter of 2007, we repurchased 4.6 million shares of common stock at a cost of \$100 million (54.3 million shares at a cost of \$1.0 billion during the second quarter of 2006). During the first half of 2007, we repurchased 23.8 million shares of common stock at a cost of \$500 million (192.8 million shares at a cost of \$3.9 billion during the first half of 2006). Since the repurchase program began in 1990, we have repurchased and retired approximately 2.9 billion shares of common stock at a cost of approximately \$58 billion. As of June 30, 2007, \$16.8 billion remained available under the existing repurchase authorization.

Note 7: Trading Assets

Trading assets at fair value at the end of each period were as follows:

<u>(In Millions)</u>	June 30, 2007	Dec. 30, 2006
----------------------	------------------	------------------

Edgar Filing: INTEL CORP - Form 10-Q

Marketable debt securities	\$	1,256	\$	684
Equity securities offsetting deferred compensation		479		450
Total	\$	1,735	\$	1,134

All floating-rate asset-backed securities purchased after December 30, 2006 are designated as trading assets.

8

INTEL CORPORATION

NOTES TO CONSOLIDATED CONDENSED FINANCIAL STATEMENTS Unaudited (Continued)

Note 8: Equity Investments

The carrying value for our investment in Clearwire Corporation as of June 30, 2007 was \$609 million. Based on the quoted closing stock price as of June 29, 2007, the fair value of our ownership interest in Clearwire was \$896 million; however since we account for our investment under the equity method, the investment is not carried at fair value. We record our proportionate share of Clearwire's operating loss on a one-quarter lag. The Clearwire investment is classified within other long-term assets on the consolidated condensed balance sheets.

In March 2007, Clearwire completed an initial public offering (IPO) of 24 million shares of common stock at a price of \$25 per share on The NASDAQ Global Select Market*. Accordingly, our ownership interest in Clearwire decreased from approximately 27% as of December 30, 2006 to 23% after the IPO. We recognized a gain of \$39 million within gains (losses) on equity investments, net, in the first quarter of 2007 as a result of the IPO.

Note 9: Inventories

Inventories at the end of each period were as follows:

<u>(In Millions)</u>	June 30, 2007	Dec. 30, 2006
Raw materials	\$ 583	\$ 608
Work in process	2,063	2,044
Finished goods	1,481	1,662
Total	\$ 4,127	\$ 4,314

Note 10: Gains (Losses) on Equity Investments, Net

Gains (losses) on equity investments, net which includes investments accounted for under the equity method and certain equity derivatives, were a net loss of \$1 million for the second quarter of 2007 and a net gain of \$28 million for the first half of 2007 (net gains of \$37 million for the second quarter of 2006 and \$39 million for the first half of 2006). Included in these amounts were impairment charges on equity investments of \$44 million for the second quarter of 2007 and \$80 million for the first half of 2007 (\$10 million for the second quarter of 2006 and \$33 million for the first half of 2006). For the second quarter of 2007, these impairment charges, as well as losses on equity method investments, were offset by higher gains on sales of equity investments. The first half of 2007 includes a gain of \$39 million from the first quarter of 2007 as a result of Clearwire's IPO. See Note 8: Equity Investments for further discussion.

Note 11: Interest and Other, Net

Interest and other, net included:

<u>(In Millions)</u>	Three Months Ended		Six Months Ended	
	June 30, 2007	July 1, 2006	June 30, 2007	July 1, 2006

Change in net unrealized holding gain on derivatives	(9)	27	(10)	32
Total comprehensive income	\$ 1,274	\$ 911	\$ 2,875	\$ 2,306

The components of accumulated other comprehensive income (loss), net of tax, at the end of each period were as follows:

<u>(In Millions)</u>	June 30, 2007	Dec. 30, 2006
Accumulated net unrealized holding gain on available-for-sale investments	\$ 84	\$ 113
Accumulated net unrealized holding gain on derivatives	70	80
Accumulated net prior service costs	(16)	(16)
Accumulated net actuarial losses	(232)	(232)
Accumulated transition obligation	(2)	(2)
Total accumulated other comprehensive income (loss)	\$ (96)	\$ (57)

Note 13: Pending Divestiture

On May 22, 2007, we announced that we entered into a definitive agreement to form a private, independent semiconductor company with STMicroelectronics N.V. and Francisco Partners L.P. The new company is expected to supply flash memory solutions for wireless communications, consumer devices, and other applications. Under the terms of the agreement, we expect to sell certain NOR flash memory assets to the new company. We expect to obtain a 45.1% ownership interest in the new company, which will be accounted for under the equity method of accounting. STMicroelectronics N.V. will sell certain assets and obtain a 48.6% ownership interest in the new company. Francisco Partners L.P. will contribute \$150 million for a 6.3% ownership interest in the new company. We presently expect this transaction to close during the second half of 2007, subject to regulatory and other closing terms and conditions. We expect to enter into supply and transition service agreements to provide support to the new company during the transition period. NOR flash memory assets totaling \$499 million are classified as held for sale within other current assets on the consolidated condensed balance sheet as of June 30, 2007 as a result of the pending divestiture. We cease recording depreciation on assets that are classified as held for sale.

Note 14: Restructuring and Asset Impairment Charges

In the third quarter of 2006, management approved several actions as part of a restructuring plan designed to improve operational efficiency and financial results. Under this plan, we recorded \$82 million in the second quarter of 2007 and \$157 million in first half of 2007 in restructuring and asset impairment charges, net of adjustments. During the second quarter of 2007, we recorded \$80 million in employee severance and benefits arrangements and \$2 million in

asset impairments. For the first half of 2007, we incurred \$101 million in employee severance and benefits arrangements and \$56 million in asset impairments. During the first quarter of 2007, we incurred \$54 million in asset impairment charges as a result of softer than anticipated market conditions relating to the Colorado Springs, Colorado facility, which was originally placed for sale and written down in the fourth quarter of 2006.

INTEL CORPORATION

NOTES TO CONSOLIDATED CONDENSED FINANCIAL STATEMENTS Unaudited (Continued)

The following table summarizes the restructuring and asset impairment activity for the first half of 2007:

<u>(In Millions)</u>	Employee Severance and Benefits	Asset Impairments	Total
Accrued restructuring balance as of December 30, 2006	\$ 48	\$	\$ 48
Additional accruals	106	56	162
Adjustments	(5)		(5)
Cash payments	(73)		(73)
Non-cash settlements		(56)	(56)
Accrued restructuring balance as of June 30, 2007	\$ 76	\$	\$ 76

The additional accruals, net of adjustments, have been reflected as restructuring and asset impairment charges on the consolidated condensed statements of income. The remaining accrual as of June 30, 2007 relates to severance benefits that are recorded as a current liability within accrued compensation and benefits on the consolidated condensed balance sheets.

From the third quarter of 2006 through the second quarter of 2007, we incurred a total of \$712 million in restructuring and asset impairment charges related to this plan. These charges include a total of \$339 million related to employee severance and benefit arrangements due to the termination of approximately 7,900 employees and \$373 million in asset impairment charges. We may incur additional restructuring charges in the future for employee severance and benefit arrangements, and facility-related or other exit activities.

Note 15: Taxes

Effective at the beginning of the first quarter of 2007, we adopted the provisions of FIN 48, Accounting for Uncertainty in Income Taxes an interpretation of FASB Statement No. 109. FIN 48 contains a two-step approach to recognizing and measuring uncertain tax positions accounted for in accordance with SFAS No. 109, Accounting for Income Taxes. The first step is to evaluate the tax position for recognition by determining if the weight of available evidence indicates that it is more likely than not that the position will be sustained on audit, including resolution of any related appeals or litigation processes. The second step is to measure the tax benefit as the largest amount that is more than 50% likely of being realized upon ultimate settlement.

As a result of the implementation of FIN 48, we reduced the liability for net unrecognized tax benefits by \$181 million, and accounted for the reduction as a cumulative effect of a change in accounting principle that resulted in an increase to retained earnings of \$181 million. The total amount of gross unrecognized tax benefits as of the date of adoption was \$1.9 billion. We have historically classified unrecognized tax benefits in current taxes payable. As a result of adoption of FIN 48, we reclassified unrecognized tax benefits to long-term income taxes payable. Long-term income taxes payable includes uncertain tax positions, reduced by the associated federal deduction of state taxes and foreign tax credits, and may also include certain other long-term tax liabilities.

During the first and second quarters of 2007, the total amount of unrecognized tax benefits was as follows:

<u>(In Millions)</u>		
December 31, 2006 (after adoption of FIN 48)	\$	1,896
Settlement with tax authorities		(739)
Other changes in unrecognized tax benefits		42
March 31, 2007		1,199

Edgar Filing: INTEL CORP - Form 10-Q

Effective settlement with tax authorities and related remeasurements	(388)
Other changes in unrecognized tax benefits	(3)
June 30, 2007	\$ 808

INTEL CORPORATION

NOTES TO CONSOLIDATED CONDENSED FINANCIAL STATEMENTS Unaudited (Continued)

Our U.S. federal, U.S. state, and foreign tax returns are periodically examined by tax authorities. In 2005 and 2006, the U.S. Internal Revenue Service (IRS), through examination of our U.S. federal tax returns, formally assessed for tax years 1999 through 2005, certain adjustments to the amounts reflected by us on those returns for tax benefits we claimed for export sales. In March 2007, we received written notification from the IRS that it had closed its examination of our tax returns for the years 1999 through 2002, resolving the issues related to the tax benefits for export sales as well as a number of other issues. Additionally, a settlement was reached for years 2003 through 2005 with respect to the tax benefits for export sales. Of the \$739 million settlement with the IRS noted above, we reversed long-term taxes payable, which resulted in recording a \$276 million tax benefit in the first quarter of 2007. For our U.S. state and foreign tax returns prior to 1996, we are generally no longer subject to tax examinations. Sooner than expected, but during the second quarter of 2007, we effectively settled with the IRS on several matters relating to the audit for the 2003 and 2004 tax years. However, the IRS audit for these years remains open. In addition, all uncertain tax positions were re-evaluated based on all available information and certain remeasurements were required. As a result, we reversed a portion of long-term taxes payable, which resulted in recording a \$155 million tax benefit in the second quarter of 2007. The total amount of gross unrecognized tax benefits was \$808 million as of June 30, 2007. These gross unrecognized tax benefits would affect the effective tax rate if realized. We include interest and penalties related to unrecognized tax benefits within the provision for taxes on our consolidated condensed statements of income and as a result no change in classification was made upon adopting FIN 48. As of the date of adoption, we had accrued \$257 million and as of June 30, 2007, we had accrued \$93 million for the payment of interest and penalties relating to unrecognized tax benefits. Although timing of the resolution and/or closure on audits is highly uncertain, it is reasonably possible that the balance of gross unrecognized tax benefits would materially change in the next 12 months. However, given the number of years remaining subject to examination and the number of matters being examined, we are unable to estimate the range of possible adjustments to the balance of gross unrecognized tax benefits.

Note 16: Identified Intangible Assets

We classify identified intangible assets within other long-term assets on the consolidated condensed balance sheets. Identified intangible assets consisted of the following as of June 30, 2007:

<u>(In Millions)</u>	Gross Assets	Accumulated Amortization	Net
Intellectual property assets	\$ 1,010	\$ (360)	\$ 650
Acquisition-related developed technology	4	(2)	2
Other intangible assets	389	(116)	273
Total identified intangible assets	\$ 1,403	\$ (478)	\$ 925

Identified intangible assets consisted of the following as of December 30, 2006:

<u>(In Millions)</u>	Gross Assets	Accumulated Amortization	Net
Intellectual property assets	\$ 1,143	\$ (434)	\$ 709
Acquisition-related developed technology	4	(2)	2
Other intangible assets	349	(73)	276
Total identified intangible assets	\$ 1,496	\$ (509)	\$ 987

During the first half of 2007, we acquired intellectual property assets for \$22 million with a weighted average life of six years and recorded additional other intangible assets of \$40 million with a weighted average life of four years.

INTEL CORPORATION**NOTES TO CONSOLIDATED CONDENSED FINANCIAL STATEMENTS Unaudited (Continued)**

All of our identified intangible assets are subject to amortization. Amortization of intellectual property assets was \$37 million for the second quarter of 2007 and \$81 million for the first half of 2007 (\$46 million for the second quarter of 2006 and \$92 million for the first half of 2006). The amortization of intellectual property assets is generally included in cost of sales on the consolidated condensed statements of income. Amortization of acquisition-related developed technology was less than \$1 million for the first half of 2007 (\$5 million for the second quarter of 2006 and \$17 million for the first half of 2006) and is included in amortization of acquisition-related intangibles and costs on the consolidated condensed statements of income. Amortization of other intangible assets was \$24 million for the second quarter of 2007 and \$43 million for the first half of 2007 (\$8 million for the second quarter of 2006 and \$24 million for the first half of 2006). We record amortization of other intangible assets as either a reduction of revenue or amortization of acquisition-related intangibles and costs on the consolidated condensed statements of income.

Based on identified intangible assets recorded at June 30, 2007, and assuming the underlying assets are not impaired in the future, we expect amortization expense for each period to be as follows:

(In Millions)	2007¹	2008	2009	2010	2011
Intellectual property assets	\$ 74	\$ 146	\$ 119	\$ 107	\$ 56
Acquisition-related developed technology	\$ 1	\$ 1	\$	\$	\$
Other intangible assets	\$ 44	\$ 98	\$ 121	\$ 10	\$

¹ *Reflects the remaining six months of fiscal 2007.*

Note 17: Ventures

In January 2006, Micron Technology Inc. and Intel formed IM Flash Technologies, LLC (IMFT) and in February 2007 formed IM Flash Singapore, LLP (IMFS). These joint ventures were established to manufacture NAND flash memory products for Micron and Intel. Initial production from IMFT began in early 2006 while IMFS is in its initial construction phase. We own a 49% interest in each of these ventures. Subject to certain conditions, we agreed to contribute up to approximately \$1.4 billion for IMFT and up to approximately \$1.7 billion for IMFS in the three years following the initial capital contributions. Of these amounts, as of June 30, 2007, approximately \$740 million remained as a commitment for IMFT and approximately \$1.6 billion for IMFS.

Our portion of IMFT costs, primarily related to product purchases and start-up, was approximately \$190 million during the second quarter of 2007 and approximately \$350 million during the first half of 2007. Our portion of IMFT costs during the first half of 2006 was not significant. IMFS has had no production to date.

These joint ventures are variable interest entities as defined by FASB Interpretation No. 46(R), Consolidation of Variable Interest Entities (FIN 46(R)), because all positive and negative variances in cost structure will be passed on to Micron and Intel through our purchase agreements. However, we have determined that we are not the primary beneficiary of these joint ventures. Because we are not the primary beneficiary of these joint ventures, we account for our interests using the equity method of accounting and do not consolidate these joint ventures. Micron and Intel are also considered related parties under the provisions of FIN 46(R). Our proportionate share of income or losses from our investment will be recorded in gains (losses) on equity investments, net. As of June 30, 2007, our maximum exposure to loss is \$1.8 billion for IMFT and \$67 million for IMFS, which represent our investments in these ventures. Our investments in these ventures are classified within other long-term assets on the consolidated condensed balance sheets.

Note 18: Contingencies**Tax Matters**

In connection with the regular examination of our tax returns for the years 1999 through 2005, the IRS had formally assessed adjustments to the amounts reflected by us on those returns as a tax benefit for export sales. In the first quarter of 2007, we resolved these matters with the IRS. See Note 15: Taxes for further discussion. The IRS may make a claim related to the tax benefit for export sales for 2006. Management believes that the ultimate outcome will not materially affect our financial position, cash flows, or overall trends in results of operations.

INTEL CORPORATION

NOTES TO CONSOLIDATED CONDENSED FINANCIAL STATEMENTS Unaudited (Continued)

Legal Proceedings

We are currently a party to various legal proceedings, including those noted in this section. While management presently believes that the ultimate outcome of these proceedings, individually and in the aggregate, will not materially harm the company's financial position, cash flows, or overall trends in results of operations, litigation is subject to inherent uncertainties, and unfavorable rulings could occur. An unfavorable ruling could include money damages or, in cases for which injunctive relief is sought, an injunction prohibiting us from selling one or more products. Were an unfavorable ruling to occur, our business or results of operations could be materially harmed.

Advanced Micro Devices, Inc. (AMD) and AMD International Sales & Service, Ltd. v. Intel Corporation and Intel Kabushiki Kaisha, and Related Consumer Class Actions and Government Investigations

In June 2005, AMD filed a complaint in the United States District Court for the District of Delaware alleging that we and our Japanese subsidiary engaged in various actions in violation of the Sherman Act and the California Business and Professions Code, including providing secret and discriminatory discounts and rebates and intentionally interfering with prospective business advantages of AMD. AMD's complaint seeks unspecified treble damages, punitive damages, an injunction, and attorneys' fees and costs. Subsequently, AMD's Japanese subsidiary also filed suits in the Tokyo High Court and the Tokyo District Court against our Japanese subsidiary, asserting violations of Japan's Antimonopoly Law and alleging damages in each suit of approximately \$55 million, plus various other costs and fees. At least 78 separate class actions have been filed in the U.S. District Courts for the Northern District of California, Southern District of California, and the District of Delaware, as well as in various California, Kansas, and Tennessee state courts. These actions generally repeat AMD's allegations and assert various consumer injuries, including that consumers in various states have been injured by paying higher prices for Intel microprocessors. All the federal class actions have been consolidated by the Multidistrict Litigation Panel to the District of Delaware. All California class actions have been consolidated to the Superior Court of California in Santa Clara County. We dispute AMD's claims and the class-action claims, and intend to defend the lawsuits vigorously.

We are also subject to certain antitrust regulatory inquiries. In 2001, the European Commission commenced an investigation regarding claims by AMD that we used unfair business practices to persuade clients to buy our microprocessors. The European Commission sent us a Statement of Objections dated July 25, 2007 alleging that certain Intel marketing and pricing practices amounted to an abuse of a dominant position that infringed European law. We will now have an opportunity to respond to those allegations, which the Statement recognized were preliminary conclusions. We are reviewing those allegations and intend to contest this matter vigorously in the administrative procedure which has now begun and, if necessary, in European courts. In June 2005, we received an inquiry from the Korea Fair Trade Commission requesting documents from our Korean subsidiary related to marketing and rebate programs that we entered into with Korean PC manufacturers. We are cooperating with this agency in its investigation. We expect that these matters will be acceptably resolved.

Barbara's Sales, et al. v. Intel Corporation, Gateway Inc., Hewlett-Packard Co. and HPDirect, Inc.

In June 2002, plaintiffs filed a putative class action against us, Gateway Inc., Hewlett-Packard Company, and HPDirect, Inc. in the Third Judicial Circuit Court, Madison County, Illinois. The lawsuit alleges that the defendants' advertisements and statements misled the public by suppressing and concealing the alleged material fact that systems containing Intel® Pentium® 4 processors are less powerful and slower than systems containing Intel® Pentium® III processors and a competitor's microprocessors. In July 2004, the court certified against us an Illinois-only class of certain end-use purchasers of certain Pentium 4 processors or computers containing these microprocessors. In January 2005, the Circuit Court granted a motion filed jointly by the plaintiffs and Intel that stayed the proceedings in the trial court pending review of the Circuit Court's class certification order. In July 2006, the Illinois Appellate Court, Fifth District, vacated the Circuit Court's class certification order and remanded the case to the Circuit Court with instructions to reconsider its class certification ruling applying California law. In August 2006, the Illinois Supreme Court agreed to review the Appellate Court's decision, and that review is pending. The plaintiffs seek unspecified damages and attorneys' fees and costs. We dispute the plaintiffs' claims and intend to defend the lawsuit vigorously.

INTEL CORPORATION

NOTES TO CONSOLIDATED CONDENSED FINANCIAL STATEMENTS Unaudited (Continued)

Transmeta Corporation v. Intel Corporation

In October 2006, Transmeta Corporation filed a lawsuit against us in the United States District Court for the District of Delaware. Transmeta alleges that our P6, Pentium 4, Pentium® M, Intel® Core™, and Intel® Core™ 2 processors infringe 10 Transmeta patents alleged to cover computer architecture and power-efficiency technologies. In December 2006, Transmeta filed an amended complaint alleging that our processors infringe an eleventh Transmeta patent. We filed counterclaims against Transmeta alleging that Transmeta's Crusoe, Efficeon, and Efficeon 2 families of microprocessors infringe seven of our patents. Transmeta seeks damages, treble damages, an injunction, and attorneys' fees. We dispute Transmeta's allegations of infringement and intend to defend the lawsuit vigorously.

BIAX Corporation v. Intel Corporation and Analog Devices, Inc.

In May 2005, BIAx Corporation filed a lawsuit against us and Analog Devices, Inc. in the United States District Court for the Eastern District of Texas. The complaint alleged that certain Hyper-Threading-enabled processors, including Intel's Pentium® and Xeon® processors supporting Hyper-Threading Technology, and Itanium® and Itanium® 2 processors, infringed four BIAx patents. The complaint sought unspecified damages, injunctive and other relief including enhanced damages for alleged willful infringement. In June 2007, the parties reached a settlement agreement pursuant to which, among other terms, we made a payment to BIAx and, in exchange, we received a license to BIAx's patent portfolio. The settlement agreement did not significantly impact our results of operations or cash flows.

Note 19: Operating Segment Information

Our operating segments include the Digital Enterprise Group, Mobility Group, Flash Memory Group, Digital Home Group, and Digital Health Group. The Digital Home Group and Digital Health Group operating segments are included within the "all other" category. In the first quarter of 2007, the Channel Platforms Group began directly supporting our operating segments. We adjusted prior-period amounts to reflect certain minor reorganizations.

The Chief Operating Decision Maker (CODM), as defined by SFAS No. 131, "Disclosures about Segments of an Enterprise and Related Information" (SFAS No. 131), is our President and Chief Executive Officer. The CODM allocates resources to and assesses the performance of each operating segment using information about its revenue and operating income (loss) before interest and taxes.

We report the financial results of the following operating segments:

Digital Enterprise Group. Includes microprocessors and related chipsets and motherboards designed for the desktop and enterprise computing market segments; communications infrastructure components such as network processors, communications boards, and embedded processors; wired connectivity devices; and products for network and server storage.

Mobility Group. Includes microprocessors and related chipsets designed for the notebook computing market segment and wireless connectivity products. Results of the Mobility Group for the first half of 2006 include sales of cellular baseband processors and application processors. In the fourth quarter of 2006, we completed the sale of certain assets of our communications and application processor business lines to Marvell Technology Group, Ltd. Related to the sale, we entered into a manufacturing and transition services agreement with Marvell. As a result, the Mobility Group's sales for first half of 2007 include only sales of application and cellular baseband processors to Marvell.

Flash Memory Group. Includes NOR flash memory products designed for cellular phones and embedded form factors; and NAND flash memory products manufactured by IMFT that are designed for memory cards, digital audio players, cellular phones, and computing and embedded platforms. In the second quarter of 2007, we agreed to sell certain NOR flash memory assets to a new flash memory company that we plan to form with STMicroelectronics N.V. and Francisco Partners L.P. See Note 13: Pending Divestiture for further discussion.

INTEL CORPORATION**NOTES TO CONSOLIDATED CONDENSED FINANCIAL STATEMENTS Unaudited (Continued)**

We have sales and marketing, manufacturing, finance, and administration groups. Expenses for these groups are generally allocated to the operating segments and the expenses are included in the operating results reported below. Additionally, in the first quarter of 2007, we began allocating share-based compensation to the operating segments and adjusted results to reflect this change. Revenue for the all other category primarily relates to microprocessors and related chipsets sold by the Digital Home Group. The all other category also includes certain corporate-level operating expenses and charges. These expenses and charges include:

- a portion of profit-dependent bonuses and other expenses not allocated to the operating segments;
- results of operations of seed businesses that support our initiatives;
- acquisition-related costs, including amortization and any impairment of acquisition-related intangibles and goodwill;
- charges for purchased in-process research and development; and
- amounts included within restructuring and asset impairment charges on the consolidated condensed statements of income.

With the exception of goodwill, we do not identify or allocate assets by operating segment, nor does the CODM evaluate operating segments using discrete asset information. We do not report inter-segment revenue because the operating segments do not record it. We do not allocate interest and other income, interest expense, or taxes to operating segments. Although the CODM uses operating income to evaluate the segments, operating costs included in one segment may benefit other segments. Except as discussed above, the accounting policies for segment reporting are the same as for Intel as a whole.

Segment information is summarized as follows:

	Three Months		Six Months Ended	
	June	July 1,	June	July 1,
(In Millions)	30,	2006	30,	2006
Net revenue				
Digital Enterprise Group				
Microprocessor revenue	\$ 3,465	\$ 3,338	\$ 7,026	\$ 7,230
Chipset, motherboard and other revenue	1,178	1,283	2,371	2,538
	4,643	4,621	9,397	9,768
Mobility Group				
Microprocessor revenue	2,398	1,958	4,839	4,305

Flash Memory Group	(291)	(169)	(574)	(294)

Edgar Filing: INTEL CORP - Form 10-Q

All other	(426)	(361)	(780)	(743)
Total operating income	\$ 1,350	\$ 1,072	\$ 3,025	\$ 2,790

16

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Our Management's Discussion and Analysis of Financial Condition and Results of Operations (MD&A) is provided in addition to the accompanying consolidated condensed financial statements and notes to assist readers in understanding our results of operations, financial condition, and cash flows. The MD&A is organized as follows:

Overview. Discussion of our business and overall analysis of financial and other highlights affecting the company in order to provide context for the remainder of MD&A.

Strategy. Overall strategy and the strategy for our operating segments.

Critical Accounting Estimates. Accounting estimates that we believe are important to understanding the assumptions and judgments incorporated in our reported financial results and forecasts.

Results of Operations. An analysis of our financial results for the quarter and six months ended June 30, 2007.

Liquidity and Capital Resources. An analysis of changes in our balance sheets and cash flows, and discussion of our financial condition.

Business Outlook. Our forecasts for selected data points for the third quarter of 2007 and the 2007 fiscal year.

The various sections of this MD&A contain a number of forward-looking statements. Words such as expects, goals, plans, believes, continues, may, and variations of such words and similar expressions identify forward-looking statements. In addition, any statements that refer to projections of our future financial performance, our anticipated growth and trends in our businesses, and other characterizations of future events or circumstances are forward-looking statements. Such statements are based on our current expectations and could be affected by the uncertainties and risk factors described throughout this filing and particularly in the Business Outlook section (see also Risk Factors in Part II, Item 1A of this Form 10-Q). Our actual results may differ materially, and these forward-looking statements do not reflect the potential impact of any divestitures, mergers, acquisitions, or other business combinations that had not been completed as of July 31, 2007.

Overview

We make, market, and sell advanced integrated digital technology products, primarily integrated circuits, for the computing and communications industries. Integrated circuits are semiconductor chips etched with interconnected electronic switches, and these chips perform various functions such as acting as the brains of a computer. Our goal is to be the preeminent provider of semiconductor chips and processor technology solutions to the worldwide digital economy. Intel's products include chips, boards, and other semiconductor products that are the building blocks integral to computers, servers, handheld devices, and networking and communications products. Our component-level products include microprocessors, chipsets, and flash memory. We offer products at various levels of integration, allowing our customers the flexibility to create advanced computing and communications systems and products. Our operating segments include the Digital Enterprise Group, Mobility Group, Flash Memory Group, Digital Home Group, and Digital Health Group.

Financial Highlights

Net revenue and gross margin for the first and second quarters of 2007 and the second quarter of 2006 were as follows:

<u>(In Millions)</u>	Q2 2007	Q1 2007	Q2 2006
Net revenue	\$ 8,680	\$ 8,852	\$ 8,009
Gross margin	\$ 4,075	\$ 4,432	\$ 4,171

Our net revenue for the second quarter of 2007 was \$8.7 billion, a decrease of 2% compared to the first quarter of 2007 and an increase of 8% compared to the second quarter of 2006. Revenue decreased compared to the first quarter of 2007 primarily due to lower microprocessor average selling prices, partially offset by higher mobile and server unit sales, and higher chipset revenue. Revenue increased compared to the second quarter of 2006 primarily due to higher microprocessor unit sales and higher server microprocessor average selling prices, partially offset by lower desktop and mobile microprocessor average selling prices.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (Continued)

Our overall gross margin dollars for the second quarter of 2007 decreased 8% compared to the first quarter of 2007 and decreased 2% compared to the second quarter of 2006. Our overall gross margin percentage for the second quarter of 2007 was 46.9%, compared to 50.1% in the first quarter of 2007 and 52.1% in the second quarter of 2006. The gross margin in the second quarter of 2007 decreased compared to the first quarter of 2007 primarily due to gross margin declines in the Mobility Group and Digital Enterprise Group operating segments. Unit sales for the second quarter of 2007 exceeded our expectations, however, gross margin came in below expectations primarily due to lower than expected average selling prices for microprocessors, chipsets, and flash memory. Additionally, demand in the NOR flash memory market segment was weaker than expected. The gross margin decreased compared to the second quarter of 2006 primarily due to gross margin declines in the Digital Enterprise Group and Flash Memory Group operating segments. Overall gross margin decreased primarily due to lower microprocessor average selling prices and higher start-up costs, partially offset by higher microprocessor unit sales and lower microprocessor unit costs.

Chipset unit sales were strong in the second quarter of 2007, a leading indicator of microprocessor orders in the third quarter of 2007, and a solid second half demand environment. Growth in our chipset unit sales occurred within the desktop, server, and mobile market segments. Our notebook and server revenue increased by double digit percentages compared to the second quarter of 2006. Our server revenue also increased by a double digit percentage compared to the first quarter of 2007. We have experienced, and expect to continue to experience, an overall shift in sales mix from desktop processors to mobile microprocessors. Due to the wide price differences among mobile, desktop, and server microprocessors, the mix and types of performance capabilities of microprocessors sold affect the average selling price of our products and have a substantial impact on our revenue.

In the server market, our Quad-Core Intel® Xeon® processor unit sales doubled compared to the first quarter of 2007. We continue to advance our server processor technologies as we expect to launch our first MP server processor on Intel Core microarchitecture in the third quarter of 2007. We plan to extend our technology leadership as we launch our Penryn family of processors using our next-generation 45-nanometer process technology in the second half of 2007. As we ramp our 45-nanometer process technology, we expect improvements in our gross margin as our startup costs decrease and we transition costs from manufacturing to research and development. The semiconductor industry is characterized by rapid advances in technology and new product introductions. Our failure to respond quickly to technological developments and incorporate new features into our products could harm our ability to compete. Results for the second quarter of 2007 include restructuring and asset impairment charges of \$82 million as we continue to implement plans to increase our business efficiencies to reduce costs. Our headcount has decreased by 12,200 employees compared to the second quarter of 2006. Spending as a percentage of revenue has decreased from 39% in the second quarter of 2006 to 30% in the second quarter of 2007. Additionally, our operating income has increased by 26% from the second quarter of 2006.

Our efficiency efforts have also contributed to faster factory throughput times, higher yields, and improved equipment utilization. Improvements in our equipment utilization have allowed us to lower our future capital spending outlook for fiscal 2007. Improved throughput times allow us to meet customer demands with lower inventory on hand. Due in part to these efficiencies and to higher unit demand, our raw materials, work in progress, and finished goods inventory levels were all down compared to the first quarter of 2007.

From a financial condition perspective, we ended the second quarter of 2007 with \$8.9 billion in cash and short-term investments, and returned \$500 million to stockholders through stock repurchases and \$1.3 billion as dividends during the first half of 2007.

Other Highlights & Product Releases

Intel, STMicroelectronics N.V. and Francisco Partners L.P. announced an agreement to form a new independent company by combining Intel's NOR flash memory business and STMicroelectronics' NOR and NAND flash businesses. See Note 13: Pending Divestiture for further discussion.

We introduced a new generation of Intel® Centrino® processor technology (formerly codenamed Santa Rosa) that delivers faster Intel® Core™ 2 Duo processors, high-bandwidth 802.11n WiFi connectivity, richer graphics processing and optional Intel® Turbo Memory.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (Continued)

We launched the first Intel® Core™ 2 Extreme processors for mobile, enabling notebook PCs for gamers, digital artists and media enthusiasts.

Intel introduced the Intel® 3 Series chipset family which brings new capabilities to today's systems and provides manufacturers with a socket-compatible migration path to Intel's upcoming Penryn family of processors based on the industry's first 45nm logic process technology.

Strategy

Some of the key strategic initiatives that we are focusing on are listed below and may change over time:

Customer Orientation. Our strategy focuses on developing our next generation of products based on the needs and expectations of our customers. In turn, our products help enable the design and development of new form factors and usage models for businesses and consumers. We believe that end users, original equipment manufacturers (OEMs), third-party vendors, and service providers of computing and communications systems and devices want processor technologies that are designed and configured to work together to provide an optimized end-user solution as compared to ingredients that are sold separately. Our processor technologies typically include a microprocessor, a chipset, a connectivity device, and enabling software. The success of our strategy to offer processor technologies is dependent on our ability to select and incorporate ingredients that our customers value, and to market the processor technologies effectively. To further our strategy to offer products and processor technologies that address customer needs, we offer products at various market price points.

Energy-Efficient Performance. We believe that users of computing and communications systems and devices want improved overall performance and energy-efficient performance. Improved overall performance can include faster processing performance and other capabilities such as multithreading and multitasking. Performance can also be improved through enhanced connectivity, security, manageability, reliability, ease of use, and interoperability among devices. Improved energy-efficient performance involves balancing the addition of these and other types of improved performance factors with lower power consumption. Additionally, we continue to develop multi-core microprocessors that enable improved multitasking and energy efficiency.

Design and Manufacturing Technology Leadership. Our strategy for developing microprocessors with improved performance is to synchronize the introduction of a new microarchitecture with improvements in silicon process technology. We use the term "microarchitecture" when referring to the layout, density, and logical design of each product generation. We plan to introduce a new microarchitecture approximately every two years and ramp the next generation of silicon process technology in the intervening years. This coordinated schedule allows us to develop and introduce new products based on a common microarchitecture quickly, without waiting for the next generation of silicon process technology.

Strategic Investments. We make equity investments in companies around the world to further our strategic objectives and to support our key business initiatives, including investments through our Intel Capital program. We generally focus on investing in companies and initiatives to stimulate growth in the digital economy, create new business opportunities for Intel, and expand global markets for our products. Our current investment focus areas include helping to enable mobile wireless devices, including expanding and proliferating WiMAX technologies and products; helping to advance the digital home; provide access to premium digital content; enhance the digital enterprise; advance high-performance communications infrastructures; and develop the next generation of silicon processor technologies. Our focus areas tend to develop and change over time due to rapid advancements in technology.

Business Environment. We plan to continue to cultivate new businesses and work with the computing, communications, and consumer electronics industries through standards bodies, trade associations, OEMs, original design manufacturers, and independent software and operating system vendors, to encourage the industry to offer products that take advantage of the latest market trends and usage models. These efforts include helping to expand the infrastructure for wireless connectivity, including wireless broadband. We also provide development tools and support to help software developers create software applications and operating systems that take advantage of our processor technologies. We frequently participate in industry initiatives designed to discuss and agree upon technical specifications and other aspects of technologies that could be adopted as standards by standards-setting organizations. In addition, we work collaboratively with other companies to protect digital content and the consumer.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (Continued)

The semiconductor industry is characterized by rapid advances in technology and new product introductions. Our ability to compete depends on our ability to improve our products and processor technologies faster than our competitors, anticipate changing customer requirements, develop and launch new products with features that customers want, and invest in technologies that will enhance our product offerings. See the risks described in Risk Factors in Part II, Item 1A of this Form 10-Q for additional discussion.

Strategy by Business Segment

The ***Digital Enterprise Group*** (DEG) offers computing and communications products for businesses, service providers, and consumers. DEG products are incorporated into desktop computers, enterprise computer servers, workstations, and the infrastructure for the Internet. We also offer products for the embedded market segment. Within DEG, our largest market segments are in desktop and enterprise computing. Our strategy for the desktop computing market segment is to offer products that provide increased manageability, security, and/or energy-efficient performance while at the same time lowering total cost of ownership for businesses. Our strategy for the enterprise computing market segment is to provide products that provide energy-efficient performance, ease of use, manageability, reliability, and security for entry-level to high-end servers and workstations.

The strategy for the ***Mobility Group*** is to offer notebook PC products designed to improve performance, battery life, and wireless connectivity, as well as to allow for the design of reduced form factors. We are also increasing our focus on notebooks designed for the business environment by offering products that provide increased manageability and security. For the ultra-mobile market segment we offer energy-efficient products that are designed primarily for mobile processing of digital content and Internet access, and we are developing new products to support this evolving market segment including products for mobile internet devices.

The strategy for the ***Flash Memory Group*** is to offer advanced NOR and NAND flash memory for products such as cellular phones, memory cards, digital audio players, and embedded form factors. In support of our strategy to provide advanced flash memory products we continue to focus on the development of innovative products designed to address the needs of customers for reliable, non-volatile, low cost, high density memory. In the second quarter of 2007, we agreed to sell certain NOR flash memory assets to a new flash memory company that we plan to form with STMicroelectronics N.V. and Francisco Partners L.P. See Note 13: Pending Divestiture in the Notes to Consolidated Condensed Financial Statements of this Form 10-Q for further discussion.

The strategy for the ***Digital Home Group*** is to offer products for use in PCs and in-home consumer electronics devices designed to access and share Internet, broadcast, optical media, and personal content through a variety of linked digital devices within the home. We are focusing on the design of components for high-end enthusiast PCs, mainstream PCs with rich audio/video capabilities, and consumer electronic devices such as digital TVs, high-definition media players, and set-top boxes.

The strategy for the ***Digital Health Group*** is to design and deliver technology-enabled products and explore global business opportunities in healthcare information technology, healthcare research, diagnostics, and productivity, as well as personal healthcare. In support of this strategy, we are focusing on the design of technology solutions and platforms for the digital hospital and consumer/home health products.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (Continued)

Critical Accounting Estimates

The methods, estimates, and judgments we use in applying our accounting policies have a significant impact on the results we report in our financial statements. Some of our accounting policies require us to make difficult and subjective judgments, often as a result of the need to make estimates of matters that are inherently uncertain. Our most critical accounting estimates include:

- the valuation of non-marketable equity investments, which impacts net gains (losses) on equity investments when we record impairments;

- the recognition and measurement of current and deferred income tax assets and liabilities, which impact our tax provision;

- the assessment of recoverability of long-lived assets, which primarily impacts gross margin or operating expenses when we record impairments of assets or accelerate their depreciation;

- the valuation of inventory, which impacts gross margin; and

- the valuation and recognition of share-based compensation, which impact gross margin, research and development expenses, and marketing, general and administrative expenses.

Below, we discuss these policies further, as well as the estimates and judgments involved. We also have other policies that we consider key accounting policies, such as those for revenue recognition, including the deferral of revenue on sales to distributors; however, these policies typically do not require us to make estimates or judgments that are difficult or subjective.

Non-Marketable Equity Investments. We regularly invest in non-marketable equity investments of private companies, which range from early-stage companies that are often still defining their strategic direction to more mature companies whose products or technologies may directly support an Intel product or initiative. The carrying value of our portfolio of strategic investments in non-marketable equity investments, excluding equity derivatives, totaled \$2.8 billion at June 30, 2007 and December 30, 2006 and consists primarily of our investment in IM Flash Technologies, LLC (IMFT). Our non-marketable equity investments are classified under other long-term assets. In the first quarter of 2007, Clearwire Corporation became a public company and therefore is no longer considered a non-marketable equity investment. Our investment in Clearwire remains classified under other long-term assets. See Note 8: Equity Investments in the Notes to Consolidated Condensed Financial Statements of this Form 10-Q for further discussion.

Non-marketable equity investments are inherently risky, and a number of these companies are likely to fail. Their success is dependent on product development, market acceptance, operational efficiency, and other factors. In addition, depending on their future prospects and market conditions, they may not be able to raise additional funds when needed or they may receive lower valuations, with less favorable investment terms than in previous financings, and our investments would likely become impaired.

We review our investments quarterly for indicators of impairment; however, for non-marketable equity investments, the impairment analysis requires significant judgment to identify events or circumstances that would significantly harm the fair value of the investment. The indicators that we use to identify those events or circumstances include:

- the investee's revenue and earnings trends relative to predefined milestones and overall business prospects;

- the technological feasibility of the investee's products and technologies;

- the general market conditions in the investee's industry or geographic area, including regulatory or economic changes;

factors related to the investee's ability to remain in business, such as the investee's liquidity, debt ratios, and the rate at which the investee is using its cash; and

the investee's receipt of additional funding at a lower valuation.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (Continued)

Investments identified as having an indicator of impairment are subject to further analysis to determine if the investment is other than temporarily impaired, in which case we write down the investment to its estimated fair value. When an investee is not considered viable from a financial or technological point of view, we write off the investment, since we consider the estimated fair value to be nominal. If an investee obtains additional funding at a valuation lower than our carrying amount or requires a new round of equity funding to stay in operation and the new funding does not appear imminent, we presume that the investment is other than temporarily impaired, unless specific facts and circumstances indicate otherwise. Impairments of investments in our portfolio of non-marketable equity investments were \$44 million in the second quarter of 2007 and \$80 million for the first half of 2007 (\$10 million in the second quarter of 2006 and \$33 million for the first half of 2006). Over the past twelve quarters, including the second quarter of 2007, impairments of investments in our portfolio of non-marketable equity investments have ranged between \$10 million and \$44 million per quarter.

Income Taxes. We adopted Financial Accounting Standards Board Interpretation No. 48, Accounting for Uncertainty in Income Taxes an interpretation of FASB Statement No. 109 (FIN 48), and related guidance in the first quarter of 2007. See Note 15: Taxes in the Notes to Consolidated Condensed Financial Statements of this Form 10-Q for further discussion.

We must make certain estimates and judgments in determining income tax expense for financial statement purposes. These estimates and judgments occur in the calculation of tax credits, benefits, and deductions, and in the calculation of certain tax assets and liabilities, which arise from differences in the timing of recognition of revenue and expense for tax and financial statement purposes, as well as the interest and penalties relating to these uncertain tax positions. Significant changes to these estimates may result in an increase or decrease to our tax provision in a subsequent period.

We must assess the likelihood that we will be able to recover our deferred tax assets. If recovery is not likely, we must increase our provision for taxes by recording a valuation allowance against the deferred tax assets that we estimate will not ultimately be recoverable. We believe that we will ultimately recover a substantial majority of the deferred tax assets recorded on our consolidated condensed balance sheets. However, should there be a change in our ability to recover our deferred tax assets, our tax provision would increase in the period in which we determined that the recovery is not probable.

In addition, the calculation of our tax liabilities involves dealing with uncertainties in the application of complex tax regulations. As a result of the implementation of FIN 48, we recognize liabilities for uncertain tax positions based on the two-step process prescribed within the interpretation. The first step is to evaluate the tax position for recognition by determining if the weight of available evidence indicates that it is more likely than not that the position will be sustained on audit, including resolution of related appeals or litigation processes, if any. The second step requires us to estimate and measure the tax benefit as the largest amount that is more than 50% likely of being realized upon ultimate settlement. It is inherently difficult and subjective to estimate such amounts, as this requires us to determine the probability of various possible outcomes. We reevaluate these uncertain tax positions on a quarterly basis. This evaluation is based on factors including, but not limited to, changes in facts or circumstances, changes in tax law, effectively settled issues under audit, and new audit activity. Such a change in recognition or measurement would result in the recognition of a tax benefit or an additional charge to the tax provision in the period.

Long-Lived Assets. We assess the impairment of long-lived assets when events or changes in circumstances indicate that the carrying value of the assets or the asset grouping may not be recoverable. Factors that we consider in deciding when to perform an impairment review include significant under-performance of a business or product line in relation to expectations, significant negative industry or economic trends, and significant changes or planned changes in our use of the assets. Recoverability of assets that will continue to be used in our operations is measured by comparing the carrying amount of the asset grouping to our estimate of the related total future undiscounted net cash flows. If an asset grouping's carrying value is not recoverable through the related undiscounted cash flows, the asset grouping is considered to be impaired. The impairment is measured by the difference between the asset grouping's carrying amount and its fair value, based on the best information available, including market prices or discounted cash flow

analysis.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (Continued)

Impairments of long-lived assets are determined for groups of assets related to the lowest level of identifiable independent cash flows. Due to our asset usage model and the interchangeable nature of our semiconductor manufacturing capacity, we must make subjective judgments in determining the independent cash flows that can be related to specific asset groupings. In addition, as we make manufacturing process conversions and other factory planning decisions, we must make subjective judgments regarding the remaining useful lives of assets, primarily process-specific semiconductor manufacturing tools and building improvements. When we determine that the useful lives of assets are shorter than we had originally estimated, and there are sufficient cash flows to support the carrying value of the assets, we accelerate the rate of depreciation charges in order to depreciate the assets over their new shorter useful lives. Impairments and accelerated depreciation of long-lived assets were \$14 million during the second quarter of 2007 and \$70 million for the first half of 2007 (less than \$15 million in the second quarter of 2006 and the first half of 2006). Over the past twelve quarters, including the second quarter of 2007, impairments and accelerated depreciation of long-lived assets have ranged between \$1 million and \$320 million per quarter. This range includes restructuring charges for asset impairments occurring since the fourth quarter of 2006.

Inventory. The valuation of inventory requires us to estimate obsolete or excess inventory as well as inventory that is not of saleable quality. The determination of obsolete or excess inventory requires us to estimate the future demand for our products. The demand forecast is included in the development of our short-term manufacturing plans to enable consistency between inventory valuation and build decisions. Product-specific facts and circumstances reviewed in the inventory valuation process include a review of the customer base, the stage of the product life cycle of our products, consumer confidence, and customer acceptance of our products as well as an assessment of the selling price in relation to the product cost. If our demand forecast for specific products is greater than actual demand and we fail to reduce manufacturing output accordingly, or if we fail to forecast accurately the demand, we could be required to write off inventory, which would have a negative impact on our gross margin.

Share-Based Compensation. Total share-based compensation was \$237 million in the second quarter of 2007 and \$521 million for the first half of 2007 (\$332 million in the second quarter of 2006 and \$706 million for the first half of 2006). Determining the appropriate fair-value model and calculating the fair value of employee stock options and rights to purchase shares under stock purchase plans at the date of grant requires judgment. We use the Black-Scholes option pricing model to estimate the fair value of these share-based awards consistent with the provisions of Statement of Financial Accounting Standards (SFAS) No. 123 (revised 2004), Share-Based Payment (SFAS No. 123(R)). Option pricing models, including the Black-Scholes model, also require the use of input assumptions, including expected volatility, expected life, expected dividend rate, and expected risk-free rate of return. The assumptions for expected volatility and expected life are the two assumptions that significantly affect the grant date fair value. The expected dividend rate and expected risk-free rate of return are not significant to the calculation of fair value.

We use implied volatility based on freely traded options in the open market, as we believe implied volatility is more reflective of market conditions and a better indicator of expected volatility than historical volatility. In determining the appropriateness of implied volatility, we considered the following:

- the volume of market activity of freely traded options, and determined that there was sufficient market activity;
- the ability to reasonably match the input variables of freely traded options to those of options granted by the company, such as the date of grant and the exercise price, and determined that the input assumptions were comparable; and
- the term of freely traded options used to derive implied volatility, which is generally one to two years, and determined that the length of term was sufficient.

We use the simplified calculation of expected life described in the U.S. Securities and Exchange Commission's Staff Accounting Bulletin 107 (SAB 107), due to differences in the vesting terms and contractual life of current option grants compared to our historical grants. If we determined that another method used to estimate expected volatility or expected life was more reasonable than our current methods, or if another method for calculating these input assumptions was prescribed by authoritative guidance, the fair value calculated for share-based awards could change significantly. In addition, the simplified calculation of expected life is only allowed under SAB 107 through the end of

fiscal 2007, after which time we will use an alternate method for estimating the useful life of options granted.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (Continued)

Higher volatility and longer expected lives result in an increase to share-based compensation determined at the date of grant. The effect that changes in the volatility and the expected life would have on the weighted average fair value of grants and the increase in total fair value during the second quarter and the first half of 2007 is as follows:

	Q2 2007		First Half 2007	
	Weighted	Increase in	Weighted	Increase in
	Average	Total	Average	Total
	Fair	Fair Value¹	Fair	Fair Value¹
	Value	(in millions)	Value	(in millions)
As reported	\$ 5.18		\$ 5.24	
Hypothetical:				
Increase expected volatility by 5 percentage points ²	\$ 5.93	\$ 13	\$ 6.01	\$ 14
Increase expected lives by 1 year	\$ 5.64	\$ 8	\$ 5.70	\$ 8

¹ Amounts represent the hypothetical increase in the total fair value determined at the date of grant, which is amortized over the vesting period, net of estimated forfeitures.

² For example, an increase from 25% as reported volatility for Q2 2007 to a hypothetical 30% volatility.

In addition, SFAS No. 123(R) requires us to develop an estimate of the number of share-based awards that will be forfeited due to employee turnover. Quarterly changes in the estimated forfeiture rate can have a significant effect on reported share-based compensation, as we recognize the cumulative effect of adjusting the rate for all expense amortization after January 1, 2006 in the period the forfeiture estimate is changed. We estimate and adjust forfeiture rates based on a quarterly review of recent forfeiture activity and expected future employee turnover. If a revised forfeiture rate is higher than the previously estimated forfeiture rate, we make an adjustment that will result in a decrease to the expense recognized in the financial statements. If a revised forfeiture rate is lower than the previously estimated forfeiture rate, we make an adjustment that will result in an increase to the expense recognized in the financial statements. These adjustments affect our gross margin; research and development expenses; and marketing,

general and administrative expenses. The effect of forfeiture adjustments in the second quarter and the first half of 2007 was insignificant. We record cumulative adjustments to the extent that the related expense is recognized in the financial statements, beginning with implementation of SFAS No. 123(R) in the first quarter of 2006. Therefore, the potential impact from cumulative forfeiture adjustments will increase in future periods. The expense that we recognize in future periods could also differ significantly from the current period and from our forecasts due to adjustments in the assumed forfeiture rates.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (Continued)
Results of Operations - Second Quarter of 2007 Compared to Second Quarter of 2006

The following table sets forth certain consolidated statements of income data as a percentage of net revenue for the periods indicated:

<u>(Dollars in Millions, Except Per Share Amounts)</u>	Q2 2007		Q2 2006	
	Dollars	% of Net Revenue	Dollars	% of Net Revenue
Net revenue	\$ 8,680	100.0%	\$ 8,009	100.0%
Cost of sales	4,605	53.1%	3,838	47.9%
Gross margin	4,075	46.9%	4,171	52.1%
Research and development	1,353	15.5%	1,496	18.7%
Marketing, general and administrative	1,284	14.8%	1,593	19.9%
Restructuring and asset impairment charges	82	0.9%		%
Amortization of acquisition-related intangibles and costs	6	0.1%	10	0.1%
Operating income	1,350	15.6%	1,072	13.4%
Gains (losses) on equity investments, net	(1)	%	37	0.4%
Interest and other, net	180	2.0%	144	1.8%
Income before taxes	1,529	17.6%	1,253	15.6%
Provision for taxes	251	2.9%	368	4.5%
Net income	\$ 1,278	14.7%	\$ 885	11.1%
Diluted earnings per share	\$ 0.22		\$ 0.15	

The following table sets forth information of geographic regions for the periods indicated:

<u>(Dollars In Millions)</u>	Q2 2007		Q2 2006	
	Revenue	% of Total	Revenue	% of Total
Asia-Pacific	\$ 4,457	51%	\$ 4,015	50%
Americas	1,823	21%	1,713	22%
Europe	1,485	17%	1,375	17%
Japan	915	11%	906	11%
Total	\$ 8,680	100%	\$ 8,009	100%

Our net revenue for Q2 2007 was \$8.7 billion, an increase of 8% compared to Q2 2006. Higher microprocessor unit sales and higher server microprocessor average selling prices were partially offset by lower desktop and mobile microprocessor average selling prices.

Revenue in the Asia-Pacific region increased 11%, revenue in the Europe region increased 8%, revenue in the Americas region increased 6%, and revenue in Japan was approximately flat compared to Q2 2006. Revenue from both mature and emerging markets increased in Q2 2007 compared to Q2 2006. While the increase in mature markets occurred in all four geographic regions, the majority of the growth occurred in the Asia-Pacific region. Most of the

increase in the emerging markets also occurred in the Asia-Pacific region.

Our overall gross margin dollars decreased slightly by 2% in Q2 2007 compared to Q2 2006. Our overall gross margin percentage decreased to 46.9% in Q2 2007, from 52.1% in Q2 2006. The decline in gross margin percentage was primarily attributable to gross margin declines in the Digital Enterprise Group and Flash Memory Group operating segments. We derived most of our overall gross margin dollars and operating profit from the sale of microprocessors in Q2 2006, and substantially all of our overall gross margin dollars and operating profit from the sale of microprocessors in Q2 2007. See Business Outlook later in this section for a discussion of gross margin expectations.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (Continued)***Digital Enterprise Group***

The revenue and operating income for the Digital Enterprise Group operating segment for the second quarter of 2007 and the second quarter of 2006 were as follows:

<u>(In Millions)</u>	Q2 2007	Q2 2006
Microprocessor revenue	\$ 3,465	\$ 3,338
Chipset, motherboard, and other revenue	1,178	1,283
Net revenue	\$ 4,643	\$ 4,621
Operating income	\$ 817	\$ 751

Net revenue for the Digital Enterprise Group operating segment was approximately flat in Q2 2007 compared to Q2 2006. Higher microprocessor revenue was offset by lower chipset, motherboard, and other revenue. The increase in microprocessor revenue was due to higher unit sales of microprocessors, and to a lesser extent, an increase in server average selling prices, partially offset by lower desktop average selling prices in a competitive pricing environment. The decrease in chipset, motherboard, and other revenue was due to a decrease in communications infrastructure revenue, and to a lesser extent, lower motherboard unit sales, slightly offset by higher chipset revenue.

Microprocessors within the Digital Enterprise Group include microprocessors designed for the desktop and enterprise computing market segments as well as embedded microprocessors.

Operating income increased by \$66 million, or 9%, in Q2 2007 compared to Q2 2006. The increase in operating income was primarily due to lower operating expenses, partially offset by approximately \$220 million of higher start-up costs, primarily related to our 45-nanometer process technology.

Mobility Group

The revenue and operating income for the Mobility Group operating segment for the second quarter of 2007 and the second quarter of 2006 were as follows:

<u>(In Millions)</u>	Q2 2007	Q2 2006
Microprocessor revenue	\$ 2,398	\$ 1,958
Chipset and other revenue	898	731
Net revenue	\$ 3,296	\$ 2,689
Operating income	\$ 1,250	\$ 851

Net revenue for the Mobility Group operating segment increased by \$607 million, or 23%, in Q2 2007 compared to Q2 2006. Microprocessor revenue increased by \$440 million, or 22%, in Q2 2007 compared to Q2 2006, and chipset and other revenue increased by \$167 million, or 23%, in Q2 2007 compared to Q2 2006. The increase in microprocessor revenue was due to higher unit sales, partially offset by lower average selling prices. Most of the increase in chipset and other revenue was due to higher revenue from sales of chipsets and cellular baseband processors, and to a lesser extent, higher revenue from sales of wireless connectivity products. In the fourth quarter of 2006, we sold certain assets of the business line that included application and cellular baseband processors used in handheld devices, however we continue to manufacture and sell these processors as part of a manufacturing and transition services agreement.

Operating income increased significantly by \$399 million, or 47%, in Q2 2007 compared to Q2 2006. The substantial majority of the increase in operating income was due to higher revenue, and to a lesser extent, lower unit costs and lower operating expenses. These increases were partially offset by approximately \$115 million of higher start-up costs, primarily related to our 45-nanometer process technology.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (Continued)
Flash Memory Group

The revenue and operating loss for the Flash Memory Group operating segment for the second quarter of 2007 and the second quarter of 2006 were as follows:

<u>(In Millions)</u>	Q2 2007	Q2 2006
Net revenue	\$ 494	\$ 536
Operating loss	\$ (291)	\$ (169)

Net revenue for the Flash Memory Group operating segment decreased by \$42 million, or 8%, in Q2 2007 compared to Q2 2006. The decrease in revenue was due to lower average selling prices for NOR flash memory products, partially offset by higher NAND revenue. In Q1 2006, we began shipping NAND flash memory products manufactured by IMFT. Operating loss increased from \$169 million in Q2 2006 to \$291 million in Q2 2007. The operating loss increase was driven by lower overall revenue and higher costs related to our new NAND flash memory business, partially offset by lower NOR flash memory unit costs.

In the second quarter of 2007, we agreed to sell certain NOR flash memory assets to a new flash memory company that we plan to form with STMicroelectronics N.V. and Francisco Partners L.P. See Note 13: Pending Divestiture in the Notes to Consolidated Condensed Financial Statements of this Form 10-Q for further discussion.

Share-Based Compensation

Share-based compensation decreased by \$95 million to \$237 million in Q2 2007 from \$332 million in Q2 2006. This decrease was due primarily to fewer options vesting in Q2 2007. Additionally, the weighted average fair value of vesting options was lower in Q2 2007 compared to Q2 2006 mainly attributable to a lower weighted average volatility rate and shorter option vesting life. This decrease was partially offset by lower share-based compensation costs capitalized as part of inventory.

Operating Expenses

Operating expenses for the second quarter of 2007 and the second quarter of 2006 were as follows:

<u>(In Millions)</u>	Q2 2007	Q2 2006
Research and development (includes share-based compensation of \$94 in 2007 and \$126 in 2006)	\$ 1,353	\$ 1,496
Marketing, general and administrative (includes share-based compensation of \$79 in 2007 and \$140 in 2006)	\$ 1,284	\$ 1,593
Restructuring and asset impairment charges	\$ 82	\$
Amortization of acquisition-related intangibles and costs	\$ 6	\$ 10

Research and Development. Research and development spending decreased \$143 million, or 10%, in Q2 2007 compared to Q2 2006. This decrease was primarily due to lower development costs as we transition from research and development to manufacturing using our 45-nanometer process technology, and lower headcount.

Marketing, General and Administrative. Marketing, general and administrative expenses decreased \$309 million, or 19%, in Q2 2007 compared to Q2 2006. This decrease was primarily due to lower headcount, lower cooperative advertising expenses, and lower marketing program expenses.

Research and development along with marketing, general and administrative expenses were 30% of net revenue in Q2 2007 (39% of net revenue in Q2 2006).

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (Continued)

Restructuring and Asset Impairment Charges. During the second quarter of 2007, we recorded \$82 million of restructuring and asset impairment charges, net of adjustments. We recorded \$80 million related to employee severance and benefit arrangements and \$2 million related to asset impairments. See Management's Discussion and Analysis of Financial Condition and Results of Operations - First Half of 2007 compared to First Half of 2006 of this Form 10-Q for further discussion.

Gains (Losses) on Equity Investments, Interest and Other, and Provision for Taxes

Gains (losses) on equity investments, net; interest and other, net; and provision for taxes for the second quarter of 2007 and the second quarter of 2006 were as follows:

<u>(In Millions)</u>	Q2 2007	Q2 2006
Gains (losses) on equity investments, net	\$ (1)	\$ 37
Interest and other, net	\$ 180	\$ 144
Provision for taxes	\$ 251	\$ 368

Gains (losses) on equity investments, net, which includes investments accounted for under the equity method and certain equity derivatives, for Q2 2007 was a net loss of \$1 million compared to a net gain of \$37 million for Q2 2006. The decrease was due to higher impairment charges on equity investments (\$44 million in Q2 2007 and \$10 million in Q2 2006) and losses on equity method investments partially offset by higher gains on sales of equity investments. Interest and other, net increased to \$180 million in Q2 2007 compared to \$144 million in Q2 2006 reflecting higher interest income as a result of higher average investment balances and higher rates.

Our effective income tax rate for Q2 2007 was 16.4%, compared to 29.4% for Q2 2006. The Q2 2007 tax rate includes the reversal of previously accrued taxes of \$155 million. The reversal relates to effectively settling several uncertain tax positions. See Note 15: Taxes in the Notes to Consolidated Condensed Financial Statements of this Form 10-Q for further discussion. In addition, the tax rate for the second quarter of 2007 was positively impacted by an increase in the expected percentage of profits in low tax jurisdictions as well as an increase in expected research and development credits.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (Continued)**Results of Operations - First Half of 2007 Compared to First Half of 2006**

The following table sets forth certain consolidated statements of income data as a percentage of net revenue for the periods indicated:

<u>(Dollars in Millions, Except Per Share Amounts)</u>	YTD 2007		YTD 2006	
	Dollars	% of Net Revenue	Dollars	% of Net Revenue
Net revenue	\$ 17,532	100.0%	\$ 16,949	100.0%
Cost of sales	9,025	51.5%	7,835	46.2%
Gross margin	8,507	48.5%	9,114	53.8%
Research and development	2,753	15.7%	3,058	18.0%
Marketing, general and administrative	2,561	14.6%	3,237	19.1%
Restructuring and asset impairment charges	157	0.8%		%
Amortization of acquisition-related intangibles and costs	11	0.1%	29	0.2%
Operating income	3,025	17.3%	2,790	16.5%
Gains on equity investments, net	28	0.1%	39	0.2%
Interest and other, net	349	2.0%	298	1.7%
Income before taxes	3,402	19.4%	3,127	18.4%
Provision for taxes	488	2.8%	885	5.2%
Net income	\$ 2,914	16.6%	\$ 2,242	13.2%
Diluted earnings per share	\$ 0.49		\$ 0.38	

The following table sets forth information of geographic regions for the periods indicated:

<u>(Dollars In Millions)</u>	YTD 2007		YTD 2006	
	Revenue	% of Total	Revenue	% of Total
Asia-Pacific	\$ 8,889	51%	\$ 8,308	49%
Americas	3,550	20%	3,618	21%
Europe	3,207	18%	3,076	18%
Japan	1,886	11%	1,947	12%
Total	\$ 17,532	100%	\$ 16,949	100%

Our net revenue of \$17.5 billion in the first half of 2007 increased 3% compared to the first half of 2006. Higher microprocessor unit sales were mostly offset by lower microprocessor average selling prices. Higher mobile chipset revenue also contributed to the increase in net revenue.

Revenue in the Asia-Pacific region increased 7% and revenue in the Europe region increased 4% compared to the first half of 2006. These increases were partially offset by lower revenue in Japan, which decreased 3% compared to the first half of 2006. Revenue in the Americas region was approximately flat compared to the first half of 2006. Revenue in mature markets increased in the first half of 2007 compared to the first half of 2006, with substantially all of the

growth occurring in the Asia-Pacific region. There were declines in the first half of 2007 compared to the first half of 2006 in emerging markets in the Asia-Pacific region.

Our overall gross margin dollars decreased 7% in the first half of 2007 compared to the first half of 2006. Our overall gross margin percentage decreased to 48.5% in the first half of 2007, from 53.8% in the first half of 2006. The decline in gross margin percentage was primarily attributable to gross margin declines in the Digital Enterprise Group and Flash Memory Group operating segments. We derived most of our overall gross margin dollars and operating profit from the sale of microprocessors in the first half of 2006, and substantially all of our overall gross margin dollars and operating profit from the sale of microprocessors in the first half of 2007. See **Business Outlook** later in this section for a discussion of gross margin expectations.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (Continued)

Digital Enterprise Group

The revenue and operating income for the Digital Enterprise Group operating segment for the first half of 2007 and the first half of 2006 were as follows:

<u>(In Millions)</u>	YTD 2007	YTD 2006
Microprocessor revenue	\$ 7,026	\$ 7,230
Chipset, motherboard, and other revenue	2,371	2,538
Net revenue	\$ 9,397	\$ 9,768
Operating income	\$ 1,748	\$ 1,926

Net revenue for the Digital Enterprise Group operating segment decreased by \$371 million, or 4%, in the first half of 2007 compared to the first half of 2006. The decrease in microprocessor revenue was due to lower desktop average selling prices in a competitive pricing environment, partially offset by an increase in server average selling prices and higher microprocessor unit sales. The decrease in chipset, motherboard, and other revenue was due to a decrease in communications infrastructure revenue, and to a lesser extent, lower motherboard unit sales and lower chipset revenue.

Operating income decreased by \$178 million, or 9%, in the first half of 2007 compared to the first half of 2006. The decrease in operating income was primarily due to the revenue decline. Approximately \$400 million of higher start-up costs, primarily related to our 45-nanometer process technology, as well as approximately \$180 million of higher factory underutilization charges, were offset by lower operating expenses. Sales of desktop microprocessor inventory that had been previously written off further offset the effect of the revenue decline.

Mobility Group

The revenue and operating income for the Mobility Group operating segment for the first half of 2007 and the first half of 2006 were as follows:

<u>(In Millions)</u>	YTD 2007	YTD 2006
Microprocessor revenue	\$ 4,839	\$ 4,305
Chipset and other revenue	1,764	1,363
Net revenue	\$ 6,603	\$ 5,668
Operating income	\$ 2,631	\$ 1,901

Net revenue for the Mobility Group operating segment increased by \$935 million, or 16.5%, in the first half of 2007 compared to the first half of 2006. Microprocessor revenue increased by \$534 million, or 12%, in the first half of 2007 compared to the first half of 2006, while chipset and other revenue increased significantly by \$401 million, or 29%, in the first half of 2007 compared to the first half of 2006. The increase in microprocessor revenue was due to higher unit sales, partially offset by lower average selling prices. The substantial majority of the increase in chipset and other revenue was due to higher revenue from sales of chipsets and cellular baseband processors, and to a lesser extent, higher revenue from sales of wireless connectivity products.

Operating income increased significantly by \$730 million, or 38%, in the first half of 2007 compared to the first half of 2006. The substantial majority of the increase in operating income was due to higher revenue. Lower operating expenses were more than offset by approximately \$200 million of higher start-up costs, primarily related to our 45-nanometer process technology.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (Continued)
Flash Memory Group

The revenue and operating loss for the Flash Memory Group operating segment for the first half of 2007 and the first half of 2006 were as follows:

<u>(In Millions)</u>	YTD 2007	YTD 2006
Net revenue	\$ 963	\$ 1,080
Operating loss	\$ (574)	\$ (294)

Net revenue for the Flash Memory Group operating segment decreased by \$117 million, or 11%, in the first half of 2007 compared to the first half of 2006. The decrease in revenue was due to lower average selling prices of NOR flash memory products and lower NOR royalties, partially offset by higher NAND revenue. Operating loss increased from \$294 million in the first half of 2006 to \$574 million in the first half of 2007. The operating loss increase was driven by lower overall revenue and higher costs related to our new NAND flash memory business, partially offset by lower NOR flash memory unit costs.

Share-Based Compensation

Share-based compensation decreased by \$185 million to \$521 million in the first half of 2007 from \$706 million in the first half of 2006. There were fewer options vesting in the first half of 2007 compared to the first half of 2006.

Additionally, the weighted average fair value of vesting options was lower in the first half of 2007 compared to the first half of 2006 mainly attributable to a lower weighted average volatility rate and shorter option vesting life. These decreases were partially offset by lower share-based compensation costs capitalized as part of inventory.

Operating Expenses

Operating expenses for the first half of 2007 and the first half of 2006 were as follows:

<u>(In Millions)</u>	YTD 2007	YTD 2006
Research and development (includes share-based compensation of \$208 in 2007 and \$261 in 2006)	\$ 2,753	\$ 3,058
Marketing, general and administrative (includes share-based compensation of \$171 in 2007 and \$293 in 2006)	\$ 2,561	\$ 3,237
Restructuring and asset impairment charges	\$ 157	\$
Amortization of acquisition-related intangibles and costs	\$ 11	\$ 29

Research and Development. Research and development spending decreased \$305 million, or 10% in the first half of 2007 compared to the first half of 2006. The decrease was primarily due to lower development costs as we transition from research and development to manufacturing using our 45-nanometer process technology, and lower headcount.

Marketing, General and Administrative. Marketing, general and administrative expenses decreased \$676 million, or 21%, in the first half of 2007 compared to the first half of 2006. This decrease was primarily due to lower headcount, lower cooperative advertising expenses, and lower marketing program expenses.

Research and development along with marketing, general and administrative expenses were 30% of net revenue in the first half of 2007 (37% of net revenue in the first half of 2006).

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (Continued)

Restructuring and Asset Impairment Charges. In the third quarter of 2006, management approved several actions as part of a restructuring plan designed to improve operational efficiency and financial results. Under the plan, during the first half of 2007, we recorded \$157 million in restructuring and asset impairment charges, net of adjustments. We recorded \$101 million related to employee severance and benefit arrangements and \$56 million related to asset impairments. During the first quarter of 2007, we incurred \$54 million in asset impairment charges as a result of softer than anticipated market conditions relating to the Colorado Springs, Colorado facility, which was originally placed for sale and written down in the fourth quarter of 2006. We did not incur restructuring charges in the first half of 2006. The following table summarizes the restructuring and asset impairment activity for the first half of 2007:

<u>(In Millions)</u>	Employee Severance and Benefits	Asset Impairments	Total
Accrued restructuring balance as of December 30, 2006	\$ 48	\$ 56	\$ 48
Additional accruals	106	56	162
Adjustments	(5)		(5)
Cash payments	(73)		(73)
Non-cash settlements		(56)	(56)
Accrued restructuring balance as of June 30, 2007	\$ 76	\$ 56	\$ 76

The additional accruals, net of adjustments, have been reflected as restructuring and asset impairment charges on the consolidated condensed statements of income. The remaining accrual as of June 30, 2007 relates to severance benefits that are recorded as a current liability within accrued compensation and benefits on the consolidated condensed balance sheets.

From the third quarter of 2006 through the second quarter of 2007, we incurred a total of \$712 million in restructuring and asset impairment charges related to this plan. These charges include a total of \$339 million related to employee severance and benefit arrangements due to the termination of approximately 7,900 employees, of which 4,800 employees have left as of June 30, 2007. A substantial majority of these employee terminations relate to employees within manufacturing, marketing, and information technology. Of the employee severance and benefit charges incurred to date, we have paid \$263 million. These charges also include \$373 million in asset impairment charges. We estimate that actions taken to date under the restructuring plan will result in gross annual savings of approximately \$840 million, a portion of which we began to realize in the third quarter of 2006. We are realizing these savings within cost of sales; marketing, general and administrative expenses; and research and development expenses. We may record additional restructuring and asset impairment charges of approximately \$150 million in the third quarter of 2007. We may incur additional restructuring charges in the future for employee severance and benefit arrangements, and facility-related or other exit activities.

Gains on Equity Investments, Interest and Other, and Provision for Taxes

Gains on equity investments, net; interest and other, net; and provision for taxes for the first half of 2007 and the first half of 2006 were as follows:

<u>(In Millions)</u>	YTD 2007	YTD 2006
Gains on equity investments, net	\$ 28	\$ 39
Interest and other, net	\$ 349	\$ 298
Provision for taxes	\$ 488	\$ 885

Gains on equity investments, net for the first half of 2007 were \$28 million compared to \$39 million for the first half of 2006. The decrease was primarily due to higher impairment charges on equity investments (\$80 million in the first

half of 2007 and \$33 million in the first half of 2006) partially offset by higher gains on sales of equity investments.

32

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (Continued)

Interest and other, net increased to \$349 million in the first half of 2007 compared to \$298 million in the first half of 2006 due to higher interest income as a result of higher rates and higher average investment balances.

Our effective income tax rate for the first half of 2007 was 14.3%, compared to 28.3% for the first half of 2006. The rate for the first half of 2007 includes the reversal of previously accrued taxes of \$481 million relating to settlements with the U.S. Internal Revenue Service (IRS). See Note 15: Taxes in the Notes to Consolidated Condensed Financial Statements of this Form 10-Q for further discussion. The tax rate for the first half of 2007 was also positively impacted by higher domestic manufacturing deduction benefits, research and development credits, and expected higher profits in low tax jurisdictions; however, this was partially offset by the elimination of the tax benefit for export sales. The rate for the first half of 2006 includes a tax benefit related to non-U.S. research and development tax credits.

Liquidity and Capital Resources

Our financial condition remains strong. Cash, short-term investments, fixed income debt instruments included in trading assets, and debt at the end of each period were as follows:

<u>(Dollars in Millions)</u>	June 30, 2007	Dec. 30, 2006
Cash, short-term investments and fixed income debt instruments included in trading assets	\$ 10,182	\$ 9,552
Short-term and long-term debt	\$ 2,069	\$ 2,028
Debt as % of stockholders' equity	5.2%	5.5%

In summary, our cash flows were as follows:

<u>(In Millions)</u>	Six Months Ended	
	June 30, 2007	July 1, 2006
Net cash provided by operating activities	\$ 3,969	\$ 3,638
Net cash used for investing activities	(5,596)	(2,723)
Net cash used for financing activities	(262)	(4,803)
Net increase (decrease) in cash and cash equivalents	\$ (1,889)	\$ (3,888)

Operating Activities

Cash provided by operating activities is net income adjusted for certain non-cash items and changes in assets and liabilities. The increase in cash provided by operating activities for the first half of 2007 compared to the first half of 2006 was primarily due to an increase in inventory that occurred in the first half of 2006 and higher net income for the first half of 2007 partially offset by higher purchases of trading assets for the first half of 2007.

Inventories as of June 30, 2007 decreased slightly compared to December 30, 2006 levels, primarily due to lower microprocessor inventory partially offset by higher chipset inventory. Trading assets increased compared to December 30, 2006, primarily due to purchases exceeding maturities. Additionally, accounts receivable as of June 30, 2007 decreased compared to December 30, 2006, due to lower revenue in the second quarter of 2007. For the first half of 2007, our two largest customers accounted for 34% of net revenue, with one of these customers accounting for 18% of revenue and another customer accounting for 16%. For the first half of 2006, these two largest customers accounted for 36% of net revenue. Additionally, these two largest customers accounted for 45% of net accounts receivable at June 30, 2007 (44% at July 1, 2006).

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (Continued)***Investing Activities***

Investing cash flows consist primarily of capital expenditures, the proceeds from investment maturities and disposals, and purchases and investments in non-marketable and other equity investments. The increase in cash used in investing activities in the first half of 2007, compared to the first half of 2006, was primarily due to an increase in purchases and a decrease in sales and maturities of available-for-sale investments, partially offset by lower capital spending.

Purchases and investments in non-marketable equity investments for the first half of 2007 included \$511 million for our investment in IMFT (\$790 million in the first half of 2006) and \$67 million for our investment in IM Flash Singapore, LLP (IMFS).

Financing Activities

Financing cash flows consist primarily of repurchases and retirement of common stock and payment of dividends to stockholders, partially offset by proceeds from sales of shares through employee equity incentive plans. The lower cash used in financing activities in the first half of 2007, compared to the first half of 2006, was primarily due to a decrease in repurchases and retirement of common stock and an increase in proceeds from sales of shares through employee equity incentive plans. For the first half of 2007, we purchased 23.8 million shares of common stock for \$500 million compared to 192.8 million shares for \$3.9 billion in the first half of 2006. We base our level of stock repurchases on internal cash management decisions and this level may fluctuate from quarter to quarter. At June 30, 2007, \$16.8 billion remained available for repurchase under the existing repurchase authorization. For the first half of 2007, proceeds from the sale of shares pursuant to employee equity incentive plans were \$1.4 billion compared to \$494 million during the first half of 2006 as a result of a higher volume of employee exercises of stock options. Our dividend payments were \$1.3 billion in the first half of 2007, higher than the \$1.2 billion paid in the same period of the prior year, due to an increase from \$0.10 to \$0.1125 in quarterly cash dividends per common share effective for the first quarter of 2007.

Liquidity

During the first half of 2007, our level of cash declined as our cash provided by operations was less than our cash used for investing and financing activities. We use cash generated by operations as our primary source of liquidity. Another potential source of liquidity is authorized borrowings, including commercial paper of up to \$3.0 billion. There were no borrowings under our commercial paper program during the first half of 2007. We also have a shelf registration on file with the Securities and Exchange Commission (SEC) pursuant to which we may offer an indeterminate amount of debt, equity, and other securities.

We believe that we have the financial resources needed to meet business requirements for the next 12 months, including capital expenditures for the expansion or upgrading of worldwide manufacturing and assembly and test capacity, working capital requirements, the dividend program, potential stock repurchases and potential future acquisitions or strategic investments, and cash payments associated with our restructuring plan.

Contractual Obligations

As a result of the adoption of FIN 48, we reclassified unrecognized tax benefits to long-term income taxes payable. Long-term income taxes payable includes uncertain tax positions, reduced by the associated federal deduction of state taxes and foreign tax credits, and may also include other certain long-term tax liabilities. As of June 30, 2007, we have \$1.2 billion of income tax liabilities. We expect to settle/make payments on approximately \$300 million of these income tax liabilities during 2007. Most of the remaining balance is expected to be settled/paid one to three years after December 28, 2007.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (Continued)

Business Outlook

Our future results of operations and the other forward-looking statements contained in this Form 10-Q, including this MD&A, involve a number of risks and uncertainties. In particular, the statements regarding our goals and strategies, new product introductions, plans to cultivate new businesses, pending divestitures, future economic conditions, revenue, pricing, gross margin and costs, capital spending, depreciation, research and development expenses, potential impairment of investments, the tax rate, and pending legal proceedings. Our future results of operations may also be affected by the amount, type, and valuation of share-based awards granted as well as the amount of awards cancelled due to employee turnover and the timing of award exercises by employees. We are focusing on efforts to improve operational efficiency and reduce spending that may result in several actions that could have an impact on expense levels and gross margin. In addition to the various important factors discussed above, a number of other important factors could cause actual results to differ significantly from our expectations. See the risks described in Risk Factors in Part II, Item 1A of this Form 10-Q.

For the third quarter of 2007, we expect revenue to be between \$9.0 billion and \$9.6 billion, compared to our second quarter revenue of \$8.7 billion. The midpoint of this range would be a sequential increase of 7%, which is consistent with seasonal patterns. Our microprocessor business generally has followed a seasonal trend; however, there can be no assurance that this trend will continue. Historically, our sales of microprocessors have been higher in the second half of the year than in the first half of the year. Consumer purchases of PCs have been higher in the second half of the year, primarily due to back-to-school and holiday demand. In addition, technology purchases from businesses have tended to be higher in the second half of the year.

Our financial results are substantially dependent on sales of microprocessors. Revenue is partly a function of the mix of types and performance capabilities of microprocessors sold, as well as the mix of chipsets, flash memory and other semiconductor products sold, all of which are difficult to forecast. Because of the wide price differences among mobile, desktop, and server microprocessors, the mix of types and performance levels of microprocessors sold affects the average selling price that we will realize and has a large impact on our revenue and gross margin. Revenue is affected by the timing of new Intel product introductions and the demand for and market acceptance of our products; actions taken by our competitors, including new product offerings and introductions, marketing programs and pricing pressures, and our response to such actions; our ability to respond quickly to technological developments and to incorporate new features into our products; and the availability of sufficient components from suppliers to meet demand. Factors that could cause demand to be different from our expectations include customer acceptance of our products and our competitors products; changes in customer order patterns, including order cancellations; changes in the level of inventory at customers; and changes in business and economic conditions.

We expect the gross margin percentage in the third quarter of 2007 to be approximately 52%, plus or minus a couple of points. The 52% midpoint is higher than the gross margin of 46.9% in the second quarter, primarily due to lower start-up costs related to our 45-nanometer process technology, lower microprocessor unit costs, and higher unit volumes from microprocessors and chipsets. We expect the increases to our gross margin percentage to be partially offset by lower microprocessor average selling prices and higher inventory write-offs related to pre-production of products not yet qualified for sale. Our gross margin expectation for 2007 is 51%, plus or minus a few points.

Our gross margin varies primarily with revenue levels. Variability of other factors will also continue to affect cost of sales and the gross margin percentage, including product mix and pricing; capacity utilization; variations in inventory valuation, including variations related to the timing of qualifying products for sale; excess or obsolete inventory; manufacturing yields; changes in unit costs; impairment of long-lived assets, including manufacturing, assembly and test, and intangible assets; and the timing and execution of the manufacturing ramp and associated costs, including start-up costs.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (Continued)

We have continued to expand our semiconductor manufacturing and assembly and test capacity over the last few years, and we continue to plan capacity based on our overall strategy and the acceptance of our products in specific market segments. We currently expect that capital spending in 2007 will be approximately \$4.9 billion, plus or minus \$200 million, which is lower than our previous expectations of \$5.5 billion. The majority of the decrease in capital spending expectations is due to capital efficiencies from various projects, including more efficient use of tools and better yields. This capital-spending plan is dependent on expectations regarding production efficiencies and delivery times of various machinery and equipment, and construction schedules. If the demand for our products does not grow and continue to move toward higher performance products in the various market segments, revenue and gross margin would be harmed, manufacturing and assembly and test capacity would be underutilized, and the rate of capital spending could be reduced. We could be required to record an impairment of our manufacturing or assembly and test equipment and facilities, or factory-planning decisions may cause us to record accelerated depreciation. In addition, if demand for our products is reduced or we fail to accurately forecast demand, we could be required to write off inventory, which would have a negative impact on our gross margin. However, in the long term, revenue and gross margin may also be affected if we do not add capacity fast enough to meet market demand.

We expect depreciation expense to be approximately \$1.1 billion for the third quarter of 2007. We expect depreciation expense for the full year 2007 to be approximately \$4.6 billion, plus or minus \$100 million, which is lower than the previous expectation of \$4.8 billion due to suspended depreciation for NOR flash manufacturing assets that are being held for sale. See Note 13: Pending Divestiture in the Notes to Consolidated Condensed Financial Statements of this Form 10-Q for further discussion.

Spending on research and development, plus marketing, general and administrative expenses (total spending) in the third quarter of 2007 is expected to be between \$2.7 billion and \$2.8 billion, slightly higher compared to \$2.6 billion in the second quarter of 2007. Research and development spending in 2007 is expected to be approximately \$5.7 billion, which is higher than our previous expectation of approximately \$5.6 billion. Marketing, general and administrative expenses in 2007 are expected to be approximately \$5.1 billion. We continue to focus on controlling our total spending through cost-saving actions. Restructuring and asset impairment charges in the third quarter of 2007 are expected to be approximately \$150 million. Expenses, particularly certain marketing and compensation expenses vary depending on the level of demand for our products, the level of revenue and profit, and impairments of long-lived assets.

We expect the net gains from equity investments and interest and other for the third quarter of 2007 to be approximately \$320 million. Our expectations for gains (losses) from equity investments include our expectations for mergers, stock offerings, equity method income/loss, and impairment charges on public and private equity investments, and are based on our experience. It is not possible to know at the present time whether specific investments are likely to be impaired or the extent or timing of individual impairments. In addition, our expectations for gains or losses from equity investments and interest and other could vary depending on equity market levels and volatility; gains or losses realized on the sale or exchange of securities; gains or losses from equity method investments; impairment charges related to marketable, non-marketable and other investments; interest rates, cash balances, and changes in the fair value of derivative instruments.

The tax rate for the third and fourth quarters is expected to be approximately 29%, lower than the previous expectation of approximately 31%. The estimated effective tax rate is based on tax law in effect at June 30, 2007 and current expected income. The tax rate may also be affected by the closing of acquisitions or divestitures; changes in estimates of credits, benefits, and deductions; the resolution of issues arising from tax audits with various tax authorities, including payment of interest and penalties; and the ability to realize deferred tax assets.

We believe that we have the product offerings and introductions, facilities, personnel, and competitive and financial resources for continued business success, but future revenue, costs, gross margin, and profits are all influenced by a number of factors, including those discussed above, all of which are inherently difficult to forecast.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (Continued)

Status of Business Outlook and Scheduled Business Update

We expect that our corporate representatives will, from time to time, meet privately with investors, investment analysts, the media and others, and may reiterate the forward-looking statements contained in the Business Outlook section and elsewhere in this Form 10-Q, including any such statements that are incorporated by reference in this Form 10-Q. At the same time, we will keep this Form 10-Q and our most current Business Outlook publicly available on our Investor Relations Web site (www.intc.com). The public can continue to rely on the Business Outlook published on the Web site as representing our current expectations on matters covered, unless we publish a notice stating otherwise. The statements in the Business Outlook and other forward-looking statements in this Form 10-Q are subject to revision during the course of the year in our quarterly earnings releases and SEC filings and at other times. From the close of business on September 14, 2007 until our quarterly earnings release is published, presently scheduled for October 16, 2007, we will observe a quiet period. During the quiet period, the Business Outlook and other forward-looking statements first published in our Form 8-K filed on July 17, 2007, as reiterated or updated as applicable should be considered historical, speaking as of prior to the quiet period only and not subject to update. During the quiet period, our representatives will not comment on the Business Outlook or our financial results or expectations. The exact timing and duration of the routine quiet period, and any others that we utilize, from time to time, may vary at our discretion.

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

The information in this section should be read in connection with the information on financial market risk related to changes in interest rates and non-U.S. currency exchange rates in Part II, Item 7A, Quantitative and Qualitative Disclosures About Market Risk, in our Annual Report on Form 10-K for the year ended December 30, 2006. Not all estimates below are necessarily indicative of future performance, and actual results may differ materially.

Marketable Equity Investments

Our marketable investments may be classified as strategic or not strategic. The marketable equity securities included in trading assets, as well as certain equity derivatives, both not considered strategic, are held to generate returns that offset changes in liabilities related to the equity market risk of certain deferred compensation arrangements. The gains and losses from changes in fair value of these equity securities are generally offset by the gains and losses on the related liabilities, resulting in a net exposure of less than \$10 million as of both June 30, 2007 and December 30, 2006, assuming a reasonably possible decline in market prices of approximately 10% in the near term.

Our marketable strategic investments include marketable strategic equity securities, derivative equity instruments such as warrants and options, and marketable equity method investments. We invest in companies that develop software, hardware, or services supporting our technologies. Our current investment focus areas include helping to enable mobile wireless devices, advance the digital home, provide access to premium digital content, enhance the digital enterprise, advance high-performance communications infrastructures, and develop the next generation of silicon process technologies. Our focus areas tend to develop and change over time due to rapid advancements in technology. To the extent that our marketable strategic equity securities continue to have strategic value, we typically do not attempt to reduce or eliminate our market exposure, however, for our investments in strategic equity derivatives, including warrants, we may enter into transactions to reduce or eliminate the market risks. For securities that we no longer consider strategic, we evaluate legal, market, and economic factors in our decision on the timing of disposal and whether it is possible and appropriate to hedge the equity market risk. As of June 30, 2007, the fair value of our total marketable strategic investments, including marketable equity method investments, was \$970 million (\$427 million as of December 30, 2006).

To assess the market price sensitivity of our marketable strategic equity investments, we analyzed the historical movements over the past several years of high-technology stock indices that we considered appropriate. The market price sensitivity of our investment in Clearwire has been analyzed separately as described below due to the short period of time it has been publicly traded. The market price sensitivity for the remaining portion of our marketable strategic equity investments is largely affected by Micron Technology Inc.'s stock price volatility given the weight of our investment in Micron. The fair value of our investment in Micron was \$212 million as of June 30, 2007 and represented 22% of our total marketable strategic investments. Based on an analysis of the high-technology stock indices and the historical volatility of Micron's stock, we estimated that it was reasonably possible that the prices of the stocks of our marketable strategic investments, other than Clearwire, could experience a loss of 30% in the near term (30% as of December 30, 2006). This estimate is not necessarily indicative of future performance, and actual results may differ materially. Assuming a loss of 30% in market prices, and after reflecting the impact of hedges and offsetting positions, the aggregate value of our marketable strategic investments, other than Clearwire, could decrease by \$114 million, based on the value as of June 30, 2007 (a decrease in value of \$134 million, based on the value as of December 30, 2006).

The carrying value of our investment in Clearwire was \$609 million as of June 30, 2007 and represented 63% of our total marketable strategic investments. Based on the quoted stock price as of June 29, 2007, the fair value of our ownership interest in Clearwire was \$896 million. A 30% adverse change in market value, based on the June 30, 2007 fair value, would result in a fair value decline of \$269 million. Our investment balance in Clearwire does not fluctuate based on market price changes as the investment is accounted for under the equity method of accounting. Therefore, the potential fair value decline would not be indicative of the impact to our financial statements, unless an other-than temporary impairment was deemed necessary.

Non-Marketable Equity Investments

Many of the same factors that could result in an adverse movement of equity market prices affect our strategic investments in non-marketable equity investments, although we cannot quantify the impact directly. Such a movement and the underlying economic conditions would negatively affect the prospects of the companies we invest in, their ability to raise additional capital, and the likelihood of our being able to realize our investments through liquidity events such as initial public offerings, mergers, or private sales. These types of investments involve a great deal of risk, and there can be no assurance that any specific company will grow or become successful; consequently, we could lose all or part of our investment. Our strategic investments in non-marketable equity investments had a carrying amount of \$2.8 billion as of June 30, 2007 and December 30, 2006. The carrying amount of these investments approximated fair value as of June 30, 2007 and December 30, 2006. As of June 30, 2007, our non-marketable equity investment portfolio was concentrated in one company, IMFT. IMFT is a manufacturer of NAND flash memory, with a carrying amount of \$1.8 billion, or 64% of the total value of the non-marketable equity investment portfolio at June 30, 2007. See Note 17: Ventures in the Notes to Consolidated Condensed Financial Statements of this Form 10-Q for further discussion. The terms of our investment in IMFT contain contractual conditions that restrict our ability to sell the investment.

ITEM 4. CONTROLS AND PROCEDURES**Evaluation of Disclosure Controls and Procedures**

Based on management's evaluation (with the participation of our Chief Executive Officer (CEO) and Chief Financial Officer (CFO)), as of the end of the period covered by this report, our CEO and CFO have concluded that our disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) under the Securities Exchange Act of 1934, as amended, (the Exchange Act)) are effective to provide reasonable assurance that information required to be disclosed by us in reports that we file or submit under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in Securities and Exchange Commission rules and forms and is accumulated and communicated to management, including our principal executive officer and principal financial officer, as appropriate to allow timely decisions regarding required disclosure.

Changes in Internal Control over Financial Reporting

There were no changes to our internal control over financial reporting (as defined in Rules 13a-15(f) and 15d-15(f) under the Exchange Act) that occurred during the period covered by this report that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

Inherent Limitations on Effectiveness of Controls

Our management, including the CEO and CFO, does not expect that our Disclosure Controls or our internal control over financial reporting will prevent or detect all error and all fraud. A control system, no matter how well designed and operated, can provide only reasonable, not absolute, assurance that the control system's objectives will be met. The design of a control system must reflect the fact that there are resource constraints, and the benefits of controls must be considered relative to their costs. Further, because of the inherent limitations in all control systems, no evaluation of controls can provide absolute assurance that misstatements due to error or fraud will not occur or that all control issues and instances of fraud, if any, have been detected. These inherent limitations include the realities that judgments in decision-making can be faulty and that breakdowns can occur because of simple error or mistake. Controls can also be circumvented by the individual acts of some persons, by collusion of two or more people, or by management override of the controls. The design of any system of controls is based in part on certain assumptions about the likelihood of future events, and there can be no assurance that any design will succeed in achieving its stated goals under all potential future conditions. Projections of any evaluation of controls effectiveness to future periods are subject to risks. Over time, controls may become inadequate because of changes in conditions or deterioration in the degree of compliance with policies or procedures.

PART II OTHER INFORMATION

ITEM 1. LEGAL PROCEEDINGS

For a discussion of legal proceedings, see Note 18: Contingencies in the Notes to Consolidated Condensed Financial Statements of this Form 10-Q.

ITEM 1A. RISK FACTORS

We describe our business risk factors below. This description includes any material changes to and supersedes the description of the risk factors associated with our business previously disclosed in Part I, Item 1A of our Annual Report on Form 10-K for the fiscal year ended December 30, 2006.

Fluctuations in demand for our products may harm our financial results and are difficult to forecast.

If demand for our products fluctuates, our revenue and gross margin could be harmed. Important factors that could cause demand for our products to fluctuate include:

- competitive pressures, including pricing pressures, from companies that have competing products, chip architectures, manufacturing technologies, and marketing programs;
- changes in customer product needs;
- changes in the level of customers' component inventory;
- changes in business and economic conditions, including a downturn in the semiconductor industry;
- strategic actions taken by our competitors; and
- market acceptance of our products.

If product demand decreases, our manufacturing and/or assembly and test capacity could be underutilized, and we may be required to record an impairment on our long-lived assets including facilities and equipment, as well as intangible assets, which would increase our expenses. In addition, factory-planning decisions may shorten the useful lives of long-lived assets including facilities and equipment and cause us to accelerate depreciation. In the long term, if product demand increases, we may not be able to add manufacturing and/or assembly and test capacity fast enough to meet market demand. These changes in demand for our products, and changes in our customers' product needs, could have a variety of negative effects on our competitive position and our financial results, and, in certain cases, may reduce our revenue, increase our costs, lower our gross margin percentage, or require us to recognize impairments of our assets. In addition, if product demand decreases or we fail to forecast demand accurately, we could be required to write off inventory or record underutilization charges, which would have a negative impact on our gross margin.

The semiconductor industry and our operations are characterized by a high percentage of costs that are fixed or difficult to reduce in the short term, and by product demand that is highly variable and subject to significant downturns that may harm our business, results of operations, and financial condition.

The semiconductor industry and our operations are characterized by high costs, such as those related to facility construction and equipment, research and development, and employment and training of a highly skilled workforce, that are either fixed or difficult to reduce in the short term. At the same time, demand for our products is highly variable and there have been downturns, often in connection with maturing product cycles as well as downturns in general economic market conditions. These downturns have been characterized by reduced product demand, manufacturing overcapacity, high inventory levels, and lower average selling prices. The combination of these factors may cause our revenue, gross margin, cash flow, and profitability to vary significantly in both the short and long term.

We operate in intensely competitive industries, and our failure to respond quickly to technological developments and incorporate new features into our products could harm on our ability to compete.

We operate in intensely competitive industries that experience rapid technological developments, changes in industry standards, changes in customer requirements, and frequent new product introductions and improvements. If we are unable to respond quickly and successfully to these developments, we may lose our competitive position, and our products or technologies may become uncompetitive or obsolete. To compete successfully, we must maintain a successful R&D effort, develop new products and production processes, and improve our existing products and processes at the same pace or ahead of our competitors. We may not be able to successfully develop and market these new products, the products we invest in and develop may not be well received by customers, and products developed and new technologies offered by others may affect demand for our products. These types of events could have a variety of negative effects on our competitive position and our financial results, such as reducing our revenue, increasing our costs, lowering our gross margin percentage, and requiring us to recognize impairments of our assets.

Fluctuations in the mix of products sold may harm our financial results.

Because of the wide price differences among mobile, desktop, and server microprocessors, the mix and types of performance capabilities of microprocessors sold affect the average selling price of our products and have a substantial impact on our revenue. Our financial results also depend in part on the mix of other products we sell, such as chipsets, flash memory, and other semiconductor products. In addition, more recently introduced products tend to have higher associated costs because of initial overall development and production ramp. Fluctuations in the mix and types of our products may also affect the extent to which we are able to recover our fixed costs and investments that are associated with a particular product, and as a result can negatively affect our financial results.

Our global operations subject us to risks that may negatively affect our results of operations and financial condition.

We have sales offices, research and development, manufacturing, and assembly and test facilities in many countries, and as a result, we are subject to risks associated with doing business globally. Our global operations may be subject to risks that may limit our ability to manufacture, assemble and test, design, develop, or sell products in particular countries, which could in turn harm our results of operations and financial condition, including:

- security concerns, such as armed conflict and civil or military unrest, crime, political instability, and terrorist activity;
- health concerns;
- natural disasters;
- inefficient and limited infrastructure and disruptions, such as large-scale outages or interruptions of service from utilities or telecommunications providers and supply chain interruptions;
- differing employment practices and labor issues;
- local business and cultural factors that differ from our normal standards and practices;
- regulatory requirements and prohibitions that differ between jurisdictions; and
- restrictions on our operations by governments seeking to support local industries, nationalization of our operations, and restrictions on our ability to repatriate earnings.

In addition, although most of our products are priced and paid for in U.S. dollars, a significant amount of certain types of expenses, such as payroll, utilities, tax, and marketing expenses, are paid in local currencies. Our hedging programs reduce, but do not always entirely eliminate, the impact of currency exchange rate movements, and therefore fluctuations in exchange rates, including those caused by currency controls, could negatively affect our business operating results and financial condition by resulting in lower revenue or increased expenses. In addition, changes in tariff and import regulations and to U.S. and non-U.S. monetary policies may also negatively affect our revenue. Varying tax rates in different jurisdictions could negatively affect our overall tax rate.

Failure to meet our production targets, resulting in undersupply or oversupply of products, may harm our business and results of operations.

Production of integrated circuits is a complex process. Disruptions in this process can result from difficulties in our development and implementation of new processes, errors, and interruptions in the processes; defects in materials; and disruptions in our supply of materials or resources all of which could affect the timing of production ramps and yields. We may not be successful or efficient in developing or implementing new production processes. The occurrence of any of the foregoing may result in our failure to increase production as desired, resulting in higher costs or substantial decreases in yields, which could affect our ability to produce sufficient volume to meet specific product demand. The unavailability or reduced availability of certain products could make it more difficult to implement our processor technology strategy. We may also experience increases in yields. A substantial increase in yields could result in higher inventory levels and the possibility of resulting excess capacity charges as we slow production to reduce inventory levels. The occurrence of any of these events could harm our business and results of operations.

We may have difficulties obtaining the resources or products we need for manufacturing or assembling our products or operating other aspects of our business, which could harm our ability to meet demand for our products and may increase our costs.

We have thousands of suppliers providing various materials that we use in production of our products and other aspects of our business, and we seek, where possible, to have several sources of supply for all of these materials. However, we may rely on a single or a limited number of suppliers, or upon suppliers in a single country, for these materials. The inability of such suppliers to deliver adequate supplies of production materials or other supplies could disrupt our production processes or could make it more difficult for us to implement our strategy. In addition, production could be disrupted by the unavailability of the resources used in production, such as water, silicon, electricity, and gases. The unavailability or reduced availability of the materials or resources we use in our business may require us to reduce production of products or may require us to incur additional costs in order to obtain an adequate supply of these materials or resources. The occurrence of any of these events could harm our business and results of operations.

Costs related to product defects and errata may harm our results of operations and business.

Costs associated with unexpected product defects and errata (deviations from published specifications) include, for example, the costs of:

- writing off the value of inventory of defective products;
- disposing of defective products that cannot be fixed;
- recalling defective products that have been shipped to customers;
- providing product replacements for, or modifications to, defective products; and/or
- defending against litigation related to defective products.

These costs could be substantial and may therefore increase our expenses and lower our gross margin. In addition, our reputation with our customers or end users of our products could be damaged as a result of such product defects and errata, and the demand for our products could be reduced. These factors could negatively affect our financial results and the prospects for our business.

We may be subject to claims of infringement of third-party intellectual property rights, which could harm our business.

From time to time, third parties may assert against us or our customers alleged patent, copyright, trademark, and other intellectual property rights to technologies that are important to our business. We may be subject to intellectual property infringement claims from certain individuals and companies who have acquired patent portfolios for the sole purpose of asserting such claims against other companies. Any claims that our products or processes infringe the intellectual property rights of others, regardless of the merit or resolution of such claims, could cause us to incur significant costs in responding to, defending, and resolving such claims, and may divert the efforts and attention of our management and technical personnel away from our business. As a result of such intellectual property infringement claims, we could be required or otherwise decide it is appropriate to:

- pay third-party infringement claims;
- discontinue manufacturing, using, or selling particular products subject to infringement claims;
- discontinue using the technology or processes subject to infringement claims;
- develop other technology not subject to infringement claims, which could be time-consuming and costly or may not be possible; and/or
- license technology from the third party claiming infringement, which license may not be available on commercially reasonable terms.

The occurrence of any of the foregoing could result in unexpected expenses or require us to recognize an impairment of our assets, which would reduce the value of our assets and increase expenses. In addition, if we alter or discontinue our production of affected items, our revenue could be negatively impacted.

We may be subject to litigation proceedings that could harm our business.

In addition to the litigation risks mentioned above, we may be subject to legal claims or regulatory matters involving stockholder, consumer, antitrust, and other issues. As described in Note 18: Contingencies in the Notes to Consolidated Condensed Financial Statements of this Form 10-Q, we are currently engaged in a number of litigation matters. Litigation is subject to inherent uncertainties, and unfavorable rulings could occur. An unfavorable ruling could include monetary damages or, in cases for which injunctive relief is sought, an injunction prohibiting us from manufacturing or selling one or more products. Were an unfavorable ruling to occur, our business and results of operations could be materially harmed.

We may not be able to enforce or protect our intellectual property rights, which may harm our ability to compete and harm our business.

Our ability to enforce our patents, copyrights, software licenses, and other intellectual property is subject to general litigation risks, as well as uncertainty as to the enforceability of our intellectual property rights in various countries. When we seek to enforce our rights, we are often subject to claims that the intellectual property right is invalid, is otherwise not enforceable, or is licensed to the party against whom we are asserting a claim. In addition, our assertion of intellectual property rights often results in the other party seeking to assert alleged intellectual property rights of its own against us, which may harm our business. If we are not ultimately successful in defending ourselves against these claims in litigation, we may not be able to sell a particular product or family of products due to an injunction, or we may have to pay material amounts of damages which could in turn negatively affect our results of operations. In addition, governments may adopt regulations or courts may render decisions requiring compulsory licensing of intellectual property to others, or governments may require that products meet specified standards that serve to favor local companies. Our inability to enforce our intellectual property rights under these circumstances may negatively affect our competitive position and our business.

Our licenses with other companies and our participation in industry initiatives may allow other companies, including competitors, to use our patent rights.

Companies in the semiconductor industry often rely on the ability to license patents from each other in order to compete. Many of our competitors have broad licenses or cross-licenses with us, and under current case law, some of these licenses may permit these competitors to pass our patent rights on to others. If one of these licensees becomes a foundry, our competitors might be able to avoid our patent rights in manufacturing competing products. In addition, our participation in industry initiatives may require us to license our patents to other companies that adopt certain industry standards or specifications, even when such organizations do not adopt standards or specifications proposed by us. As a result, our patents implicated by our participation in industry initiatives might not be available for us to enforce against others who might otherwise be deemed to be infringing those patents, our costs of enforcing our licenses or protecting our patents may increase, and the value of our intellectual property may be impaired.

Changes in our decisions with regard to our announced restructuring and efficiency efforts, and other factors, could affect our results of operations and financial condition.

Factors that could cause actual results to differ materially from our expectations with regard to our announced restructuring include:

- timing and execution of plans and programs that may be subject to local labor law requirements, including consultation with appropriate works councils;
- assumptions related to severance and post-retirement costs;
- future acquisitions, dispositions, or investments;
- new business initiatives and changes in product roadmap, development, and manufacturing;
- changes in employment levels and turnover rates;
- assumptions related to product demand and the business environment; and
- assumptions related to the fair value of certain property, plant and equipment.

In order to compete, we must attract, retain, and motivate key employees, and our failure to do so could harm our results of operations.

In order to compete, we must attract, retain, and motivate executives and other key employees, including those in managerial, technical, sales, marketing, and support positions. Hiring and retaining qualified executives, scientists, engineers, technical staff, and sales representatives are critical to our business, and competition for experienced employees in the semiconductor industry can be intense. To help attract, retain, and motivate qualified employees, we use share-based incentive awards such as employee stock options and non-vested share units (restricted stock units). If the value of such stock awards does not appreciate as measured by the performance of the price of our common stock or if our share-based compensation otherwise ceases to be viewed as a valuable benefit, our ability to attract, retain, and motivate employees could be weakened, which could negatively affect our results of operations.

Our results of operations could vary as a result of the methods, estimates, and judgments we use in applying our accounting policies.

The methods, estimates, and judgments we use in applying our accounting policies have a significant impact on our results of operations (see Critical Accounting Estimates in Part I, Item 2 of this Form 10-Q). Such methods, estimates, and judgments are, by their nature, subject to substantial risks, uncertainties, and assumptions, and factors may arise over time that lead us to change our methods, estimates, and judgments. Changes in those methods, estimates, and judgments could significantly affect our results of operations. In particular, the calculation of share-based compensation expense under SFAS No. 123(R) requires us to use valuation methodologies and a number of assumptions, estimates, and conclusions regarding matters such as expected forfeitures, expected volatility of our share price, the expected dividend rate with respect to our common stock, and the expected exercise behavior of our employees. Under applicable accounting principles, we cannot compare and adjust our expense when we learn about additional information affecting our previous estimates, with the exception of changes in expected forfeitures of share-based awards. Factors may arise over time that lead us to change our estimates and assumptions with respect to future share-based compensation arrangements, resulting in variability in our share-based compensation expense over time. Changes in forecasted share-based compensation expense could affect our gross margin percentage; research and development expenses; marketing, general and administrative expenses; and our tax rate.

Our failure to comply with applicable environmental laws and regulations worldwide could harm our business and results of operations.

The manufacturing and assembling and testing of our products require the use of hazardous materials that are subject to a broad array of environmental, health, and safety laws and regulations. Our failure to comply with any of these applicable laws or regulations could result in:

- regulatory penalties, fines, and legal liabilities;
- suspension of production;
- alteration of our fabrication and assembly and test processes; and
- curtailment of our operations or sales.

In addition, our failure to manage the use, transportation, emission, discharge, storage, recycling, or disposal of hazardous materials could subject us to increased costs or future liabilities. Existing and future environmental laws and regulations could also require us to acquire pollution abatement or remediation equipment, modify our product designs, or incur other expenses associated with such laws and regulations. Many new materials that we are evaluating for use in our operations may be subject to regulation under existing or future environmental laws and regulations that may restrict our use of certain materials in our manufacturing, assembly and test processes, or products. Any of these restrictions could harm our business and results of operations by increasing our expenses or requiring us to alter our manufacturing and assembly and test processes.

Changes in our effective tax rate may harm our results of operations.

A number of factors may harm our future effective tax rates including:

- the jurisdictions in which profits are determined to be earned and taxed;
- the resolution of issues arising from tax audits with various tax authorities;
- changes in the valuation of our deferred tax assets and liabilities;
- adjustments to estimated taxes upon finalization of various tax returns;
- increases in expenses not deductible for tax purposes, including write-offs of acquired in-process research and development and impairment of goodwill in connection with acquisitions;
- changes in available tax credits;
- changes in share-based compensation expense;
- changes in tax laws or the interpretation of such tax laws and changes in generally accepted accounting principles; and
- the repatriation of non-U.S. earnings for which we have not previously provided for U.S. taxes.

Any significant increase in our future effective tax rates could harm net income for future periods.

We invest in companies for strategic reasons and may not realize a return on our investments.

We make investments in companies around the world to further our strategic objectives and support our key business initiatives. Such investments include investments in equity securities of public companies and non-marketable equity investments in private companies, which range from early-stage companies that are often still defining their strategic direction to more mature companies whose products or technologies may directly support an Intel product or initiative. The success of these companies is dependent on product development, market acceptance, operational efficiency, and other key business factors. The private companies in which we invest may fail because they may not be able to secure additional funding, obtain favorable investment terms for future financings, or take advantage of liquidity events such as initial public offerings, mergers, and private sales. If any of these private companies fail, we could lose all or part of our investment in that company. If we determine that an other-than-temporary decline in the fair value exists for the equity investments of the public and private companies in which we invest, we write down the investment to its fair value and recognize the related write-down as an investment loss. Furthermore, when the strategic objectives of an investment have been achieved, or if the investment or business diverges from our strategic objectives, we may decide to dispose of the investment. Our non-marketable equity investments in private companies are not liquid, and we may not be able to dispose of these investments on favorable terms or at all. The occurrence of any of these events could negatively affect our results of operations.

ITEM 2. UNREGISTERED SALES OF EQUITY SECURITIES AND USE OF PROCEEDS
Issuer Purchases of Equity Securities (Shares in Millions)

Period	Total Number of Shares Purchased	Average Price Paid per Share	Total Number of Shares Purchased as Part of Publicly Announced Plans	Dollar Value of Shares that May Yet Be Purchased Under the Plans
April 1, 2007 - April 28, 2007	0.2	\$ 21.86	0.2	\$ 16,866
April 29, 2007 - May 26, 2007	2.8	\$ 21.84	2.8	\$ 16,805
May 27, 2007 - June 30, 2007	1.6	\$ 22.16	1.6	\$ 16,770
Total	4.6	\$ 21.95	4.6	

We have an ongoing authorization, as amended in November 2005, from the Board of Directors to repurchase up to \$25 billion in shares of our common stock in open market or negotiated transactions. As of June 30, 2007, \$16.8 billion remained available under the existing repurchase authorization.

and 4. Broker non-votes accounted for this difference in voted shares, and are not considered votes cast for purposes of Section 216 of the Delaware General Corporation Law. For certain types of non-routine proposals, such as Proposals 3 and 5, brokers do not have the discretionary authority to vote their clients shares, and therefore they must refrain from voting on such proposals in the absence of instructions from their clients.

ITEM 6. EXHIBITS

- 3.1 Intel Corporation Third Restated Certificate of Incorporation (incorporated by reference to Exhibit 3.1 to the Registrant's Current Report on Form 8-K as filed on May 22, 2006)
- 3.2 Intel Corporation Bylaws, as amended on January 17, 2007 (incorporated by reference to Exhibit 3.1 to the Registrant's Current Report on Form 8-K as filed on January 18, 2007)
- 10.1 Intel Corporation 2006 Equity Incentive Plan As Amended and Restated Effective May 16, 2007 (incorporated by reference to Exhibit 10.1 of the Registrant's Current Report on Form 8-K as filed on May 16, 2007, File No. 000-06217)
- 10.2 Intel Corporation 2007 Executive Officer Incentive Plan, Effective as of January 1, 2007, (incorporated by reference to Exhibit 10.2 of the Registrant's Current Report on Form 8-K as filed on May 16, 2007, File No. 000-06217)
- 10.3 Form of Asset Transfer Agreement By and Between Newco and Intel Corporation
- 10.4 Master Agreement By and Between STMicroelectronics N.V., Intel Corporation, Redwood Blocker S.A.R.L., and Francisco Partners II (Cayman) L.P., Dated May 22, 2007
- 12.1 Statement Setting Forth the Computation of Ratios of Earnings to Fixed Charges
- 31.1 Certification of Chief Executive Officer Pursuant to Rule 13a-14(a) of the Exchange Act
- 31.2 Certification of Chief Financial Officer and Principal Accounting Officer Pursuant to Rule 13a-14(a) of the Exchange Act
- 32.1 Certification of Chief Executive Officer and Chief Financial Officer and Principal Accounting Officer Pursuant to Rule 13a-14(b) of the Exchange Act and 18 U.S.C. Section 1350, as Adopted Pursuant to Section 906 of the Sarbanes-Oxley Act of 2002

Intel, the Intel logo, Celeron, Intel Centrino, Intel Core, Intel Core Duo, Intel Core 2 Duo, Intel Core 2 Quad, Intel StrataFlash, Intel Viiv, Intel vPro, Intel Xeon, Intel XScale, Itanium, and Pentium are trademarks or registered trademarks of Intel Corporation or its subsidiaries in the United States and other countries.

* *Other names and brands may be claimed as the property of others.*

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the undersigned thereunto duly authorized.
