Is Currency a Legitimate Asset Class?

Question is not whether currency is a legitimate asset class but, rather, if it is relevant for most investors?

Up  
until  
the  
launch  
of  
CurrencyShares  
in  
2005,  
for  
most  
investors,  
currency  
wasn't  
an option.

Today, through ETFs, all investors have access to the most heavily traded and utilized currencies as well as a number of emerging market currencies.

Investors now have a simple, cost-effective, and efficient means to buy, sell, sell-short and implement option strategies on the world's most heavily traded asset class.

Strategies once limited to institutions can now be employed by everyone.

Currency The Ultimate Asset Class?

Fundamental investment tenants are premised on the practice of creating well-diversified portfolios in order to enhance returns and mitigate volatility.

Significant analysis is performed in order to determine the appropriate weightings within the various classes of equities, fixed income, and alternative assets to achieve a proper level of diversification and appropriate risk/reward parameters.

For most investors, however, very little consideration is given to the cash element of a portfolio.

Why We Can't Afford to Ignore Currency

Currency affects every aspect of our lives from the goods and services we purchase to the returns we receive (currency has a significant impact on the returns of both domestic and international companies).

S&P

companies  
derive  
nearly  
half  
of  
their  
sales

Currencies impact business in a numerous ways including:

Currency as an Asset Class

The premise of holding only U.S. Dollars is outdated as more and more goods and services are produced outside the U.S.

The massive volatility in the global currency markets has created periods where investors have lost the safe haven benefit of U.S. Dollars through the erosion of purchasing power.

The volatility has also created a tremendous amount of opportunity from an investment prospective.

In conclusion, further diversification<sup>1</sup>

within the cash-component of a well diversified

portfolio is worthy of consideration in order to insulate customers against a loss of purchasing power as well as enable them to benefit from the potential returns available in the currency market.

(1) Diversification neither assures a profit nor eliminates the risk of experiencing investment losses.
