Technitrol, Inc. and Subsidiaries
Notes to Unaudited Consolidated Financial Statements

(1) Accounting policies

For a complete description of the accounting policies of Technitrol, Inc. and its consolidated subsidiaries, refer to Note 1 of Notes to Consolidated

Edgar Filing: TECHNITROL INC - Form 10-Q

Financial Statements included in Technitrol's Form 10-K filed for the year ended December 30, 2005. We sometimes refer to Technitrol as "we" or "our".

The results for the three months ended March 31, 2006 and April 1, 2005 have been prepared by our management without audit by our independent auditors. In the opinion of management, the financial statements fairly present in all material respects, the financial position and results of operations for the periods presented. To the best of our knowledge and belief, all adjustments have been made to properly reflect income and expenses attributable to the periods presented. Except for severance and asset impairment expenses, all such adjustments are of a normal recurring nature. Operating results for the three months ended March 31, 2006 are not necessarily indicative of annual results.

New Accounting Pronouncements

In December 2004, the FASB issued Statement No. 123(R), Share-Based Payment, ("SFAS 123(R)"), which amends SFAS No. 123, Accounting for Stock-Based Compensation, and supersedes APB Opinion No. 25, Accounting for Stock Issued to Employees. SFAS 123(R) requires compensation expense to be recognized for all share-based payments made to employees based on the fair value of the award at the date of grant, eliminating the intrinsic value alternative allowed by SFAS 123. Generally, the approach to determining fair value under the original pronouncement has not changed, however, there are revisions to the accounting guidelines established, such as accounting for forfeitures. SFAS 123(R) became effective at the beginning of our fiscal 2006. Adoption of this standard resulted in a \$0.1 million cumulative effect of accounting change in the three months ended March 31, 2006.

In November 2005, the FASB issued FASB Staff Position ("FSP") SFAS 123(R)-3, Transition Election Related to Accounting for the Tax Effects of Share-based Payment Awards, that provides an elective alternative transition method of calculating the pool of excess tax benefits available to absorb tax deficiencies recognized subsequent to the adoption of SFAS No. 123R to the method otherwise required by paragraph 81 of SFAS No. 123R. We may take up to one year from the effective date of the FSP to evaluate our available alternatives and make our one-time election. We are currently evaluating the alternative methods in connection with our adoption of SFAS No. 123R.

Reclassifications

Certain amounts in the prior year financial statements have been reclassified to conform with the current year presentation.

7

Technitrol, Inc. and Subsidiaries

Notes to Unaudited Consolidated Financial Statements, continued

(2) Acquisitions

ERA Group: On January 4, 2006, we acquired all of the capital stock of ERA Group ("ERA"), headquartered in Herrenberg, Germany with production operations in Germany, China and Tunisia. The results of ERA's operations have been included in our consolidated financial statements since the effective date of the acquisition. ERA produces advanced-technology ignition coils, along with a variety of other coils and transformers used in automotive, heating/ventilation/air conditioning and appliance applications and is the foundation of Pulse's automotive division. The purchase price was approximately \$53.8 million, net of cash acquired of \$2.0 million, and including acquisition costs of approximately

Edgar Filing: TECHNITROL INC - Form 10-Q

\$0.6 million. The purchase price was financed primarily with bank credit under our multi-currency credit facility. We are in the process of obtaining third-party valuations of the property, plant and equipment and intangible assets. Therefore, the allocation of the purchase price is subject to adjustment. The excess purchase price has been recorded as goodwill on the consolidated balance sheet until the valuation is completed. However, we have recorded \$0.3 million of estimated amortization expense for the three months ended March 31, 2006. ERA will be treated as a separate reporting unit for purposes of SFAS 142. The following table summarizes the preliminary fair values of the assets acquired and liabilities assumed at the date of acquisition (in millions):

Current assets	\$ 28.1
Property, plant and equipment	19.1
Goodwill	39.5

Total assets acquired	86.7
Current liabilities	32.9

Total liabilities assumed	32.9
Net assets acquired	\$ 53.8
	=====

For the twelve months ended December 29, 2006, we estimate that ERA will generate revenues of approximately \$90 million.

LK Products OY: On September 8, 2005, we acquired all of the capital stock of LK Products OY ("LK"), headquartered in Kempele, Finland with production operations in Finland, China and Hungary as well as offices in South Korea and San Diego. The results of LK's operations have been included in our consolidated financial statements since that date. LK produces antennas and integrated modules for mobile communications and information devices and is now the cornerstone of Pulse's antenna division. The purchase price was approximately \$88.3 million, net of cash acquired of \$0.4 million, and including acquisition costs of approximately \$2.5 million. The purchase price was funded with cash on hand. The purchase agreement also includes a revenue-based earnout provision whereby we will pay the seller one euro for each euro of revenue in excess of (euro)85.0 million achieved by LK during the twelve months ended May 31, 2006. This payment will be included as goodwill, when paid. The preliminary fair value of the net tangible assets acquired approximated \$18.4 million. In addition to the fair value of assets acquired, preliminary purchase price allocations included \$15.7 million for customer relationships, \$7.3 million for trademarks, \$1.4 million for technology and \$45.9 million allocated to goodwill. Each of the identifiable intangibles with finite lives are being amortized, using lives of 5 years for technology and 10 years for customer relationships. We consider the trademark intangible to have an indefinite life, and therefore, it is not being amortized. These fair values are preliminary and subject to adjustment. LK is treated as a separate reporting unit for purposes of SFAS 142.

Edgar Filing: TECHNITROL INC - Form 10-Q

based in the Republic of China (Taiwan) and manufactures connector products, including single and multiple-port jacks, and supplies products to us under a cooperation agreement. In April 2001, we made a minority investment in the common stock of FRE, which was accounted for by the cost-basis method of accounting. On July 27, 2002, we made an additional investment in FRE of \$6.7 million which increased the total investment to \$20.9 million. As a result of the increased ownership percentage to approximately 29%, we began to account for the investment under the equity method of accounting beginning in the three months ended September 27, 2002. Shares of FRE began trading on the Taiwan Stock Exchange in January 2003, and they experienced considerable price volatility. In the three months ended December 26, 2003, we recorded an \$8.7 million net loss to adjust our original cost basis of the investment to market value. In July 2004, we purchased an additional 9.0 million shares of common stock in FRE for \$10.5 million. On September 13, 2004, we acquired an additional 2.4 million shares of common stock in FRE for \$2.5 million, bringing our ownership percentage up to 51%. Accordingly, FRE's operating results were consolidated with our own beginning September 13, 2004. Our net earnings therefore reflect FRE's net earnings, after deducting the minority interest due to the minority shareholders. During 2005, we acquired an additional 2.8 million shares of common stock in FRE for \$2.0 million, bringing our ownership percentage up to 57%. Additional purchases of common stock in FRE are allocated, on a pro rata basis, to goodwill, identifiable intangible assets, and property, plant, and equipment according to amounts recorded as of September 13, 2004. The fair value of the net tangible assets acquired through September 13, 2004 approximated \$28.8 million, less a minority interest of \$14.0 million. Based on the fair value of net tangible assets acquired and our current ownership percentage, the allocation of the investment to intangibles includes \$0.5 million for technology, \$0.6 million for trademarks, \$2.1 million for customer relationships and \$10.7 million of goodwill. All of the separately identifiable intangibles are being amortized, with using lives of 4 years for technology and customer relationships.

(3) Severance and asset impairment expense

In the three months ended March 31, 2006, we accrued \$0.9 million for a number of actions to streamline operations at Pulse and AMI Doduco. These include severance and related payments comprised of \$0.4 million related to Pulse's termination of manufacturing and support personnel at facilities in Italy and Turkey, \$0.3 million related to AMI Doduco's termination of manufacturing and support personnel at a facility in Italy, \$0.1 million related to the transfer of Pulse consumer division assets from Pulse's facility in Turkey to China, and \$0.1 million for severance and facility closure costs at other locations. The majority of these accruals will be paid by December 29, 2006, except for remaining lease or severance payments to be made over a specified term.

Our severance and asset impairment charges are summarized on a year-to-date basis for 2006 as follows (in millions):

	AMI Doduco -----	Pulse -----	Tot -----
Balance accrued at December 30, 2005	\$1.6	\$1.6	\$3
Accrued during the three months ended March 31, 2006	0.4	0.5	0
Severance and other cash payments	(0.7)	(0.7)	(1)
Non-cash asset disposals	(0.3)	(0.1)	(0)
	----	----	--
Balance accrued at March 31, 2006	\$1.0	\$1.3	\$2
	====	====	==

Technitrol, Inc. and Subsidiaries

Notes to Unaudited Consolidated Financial Statements, continued

(4) Inventories

Inventories consisted of the following (in thousands):

	March 31, 2006	December 30, 2005
	----	----
Finished goods	\$31,746	\$29,113
Work in process	23,067	19,130
Raw materials and supplies	30,852	25,355
	-----	-----
	\$85,665	\$73,598
	=====	=====

(5) Derivatives and other financial instruments

We utilize derivative financial instruments, primarily forward exchange contracts, to manage foreign currency risks. While these hedging instruments are subject to fluctuations in value, such fluctuations are generally offset by the value of the underlying exposures being hedged.

At March 31, 2006, we had one foreign exchange forward contract outstanding to sell forward approximately 51.4 million euros in the aggregate, in order to hedge intercompany loans. The term of this contract was approximately 30 days although we routinely settle such obligations and enter into new 30-day contracts each month. We had no other derivative instruments at March 31, 2006. In addition, management believes that there is no material risk of loss from changes in inherent market rates or prices in our other financial instruments.

(6) Earnings per share

Basic earnings per share are calculated by dividing net earnings by the weighted average number of common shares outstanding (excluding unvested restricted shares) during the period. We had unvested restricted shares outstanding of approximately 221,000 and 212,000 as of March 31, 2006 and April 1, 2005, respectively. For calculating diluted earnings per share, common share equivalents and unvested restricted stock outstanding are added to the weighted average number of common shares outstanding. Common share equivalents are comprised of outstanding options to purchase common stock and the amount of compensation cost attributed to future services not yet recognized as calculated using the treasury stock method. There were approximately 100,000 common share equivalents for the three months ended March 31, 2006. There were approximately 468,000 stock options outstanding as of March 31, 2006 and approximately 513,000 as of April 1, 2005.

Technitrol, Inc. and Subsidiaries

Notes to Unaudited Consolidated Financial Statements, continued

Discontinued operations	(0.00)	(0.01)
	-----	-----
Per share amount	\$ 0.30	\$ 0.13
	=====	=====

(7) Business segment information

For the three months ended March 31, 2006 and April 1, 2005 there were immaterial amounts of intersegment revenues eliminated in consolidation. There has been no material change in segment assets from December 30, 2005 to March 31, 2006, except for the acquisition of ERA for \$53.8 million, net of \$2.0 million of cash acquired (Note 2). In addition, the basis for determining segment financial information has not changed from 2005. Specific segment data are as follows (in thousands):

	Three Months Ended	
	March 31, 2006 ----	April 1, 2005 ----
Net sales:		
Pulse	\$ 144,169	\$ 75,578

11

Technitrol, Inc. and Subsidiaries

Notes to Unaudited Consolidated Financial Statements, continued

(8) Accounting for stock-based compensation

We have an incentive compensation plan for our employees. One component of this plan is restricted stock, which grants the recipient the right of ownership of our common stock, conditional on continued employment for a specified period. Another component is stock options, which are also granted under this plan. On December 31, 2005, we adopted SFAS 123(R), which replaces SFAS 123 and supersedes APB Opinion No. 25. Under SFAS No. 123(R), compensation cost relating to stock-based payment transactions is recognized in the financial statements, and is based on the fair value of the equity or liability instruments issued. SFAS No. 123(R) applies to all of our outstanding unvested stock-based payment awards as of December 31, 2005 and all prior awards using the modified prospective transition method without restatement of prior periods. As we had previously adopted SFAS 123, as amended by SFAS 148, at the beginning of the 2003 fiscal year, whereby compensation expense was recorded for all awards subsequent to adoption, our adoption did not significantly impact our financial position or our results of operations. Upon adoption of SFAS 123R, the cumulative effect recorded in the three months ended March 31, 2006 was a gain of \$0.1 million, net of taxes.

The following table presents the stock-based compensation expense included in the Consolidated Statements of Operations during the three months ended March 31, 2006 and April 1, 2005:

	March 31, 2006	April 1, 2005
	----	----
Restricted stock	\$ 724	\$ 673
Stock options	210	163
	-----	-----
Total stock-based compensation included in selling, general and administrative expenses	934	836
Income tax benefit	(326)	(292)
	-----	-----
Total after-tax stock-based compensation expense	\$ 608	\$ 544
	=====	=====

Edgar Filing: TECHNITROL INC - Form 10-Q

Restricted Stock: The value of restricted stock issued is based on the market price of the stock at the award date. Shares are held by us until the continued employment requirement has been attained. The market value of the shares at the date of grant is charged to expense on a straight-line basis over the vesting period. Cash awards, which are intended to assist recipients with their resulting personal tax liability, are based on the market value of the shares and are accrued over the vesting period. The expense related to the cash award is fixed based on the value of the awarded stock on the grant date if the recipient makes an election under Section 83(b) of the Internal Revenue Code. If the recipient does not make the election under Section 83(b), the expense related to the cash award is variable based on the current market value of the shares.

A summary of the restricted stock activity is as follows (in thousands, except per share data):

	Shares	Weighted Average Grant Price (Per Share)
	-----	-----
Nonvested at December 30, 2005	209	\$18.79
Granted	18	\$18.70
Vested	(6)	\$19.00
Forfeited	--	--
	-----	-----
Nonvested at March 31, 2006	221	\$18.77
	=====	=====

12

Technitrol, Inc. and Subsidiaries

Notes to Unaudited Consolidated Financial Statements, continued

(8) Accounting for stock-based compensation, continued

As of March 31, 2006, there was approximately \$1.4 million of total unrecognized compensation cost related to restricted stock grants. This unrecognized compensation is expected to be recognized over a weighted-average period of approximately 1.7 years.

Stock Options: Stock options are granted at no cost to the employee and cannot be granted at a price lower than the fair market value at date of grant. These options expire seven years from the date of grant and vest equally over four years. There were no options issued during the three months ended March 31, 2006 or during the year ended December 30, 2005. We value our stock options according to the fair value method using the Black-Scholes option-pricing model.

A summary of the stock options activity is as follows (in thousands, except per share data):

Weighted Average Exercise Price	Aggregate Intrinsic
--	------------------------

Edgar Filing: TECHNITROL INC - Form 10-Q

	Shares	(Per Share)	Value
	-----	-----	-----
Outstanding as of December 30, 2005	475	\$19.31	
Granted	--	--	
Exercised	(7)	\$19.65	
Forfeited/expired	--	--	
	-----	-----	
Outstanding as of March 31, 2006	468	\$19.31	\$1,334
Exercisable at March 31, 2006	313	\$20.05	\$ 668

As of March 31, 2006, there was \$1.1 million of total unrecognized compensation cost related to option grants. This unrecognized compensation is expected to be recognized over a weighted-average period of approximately 1.8 years.

During the three months ended March 31, 2006, cash received from stock options exercised was \$0.1 million. The total intrinsic value of stock options exercised during the three months ended March 31, 2006 was less than \$0.1 million. There were no stock options exercised during the three months ended April 1, 2005. The tax deduction realized from stock options exercised was less than \$0.1 million for the three months ended March 31, 2006. SFAS No. 123R requires that tax benefits from deductions in excess of the compensation cost of stock options exercised be classified as a cash inflow from financing. However, there were no such benefits recorded during the three months ended March 31, 2006 due to the minimal amount of stock options exercised during the period. Prior to adopting SFAS No. 123R, we presented these benefits in the operating section of the consolidated statements of cash flow.

No amounts of stock-based compensation cost have been capitalized into inventory or other assets during the quarter ended March 31, 2006.

13

Technitrol, Inc. and Subsidiaries

Notes to Unaudited Consolidated Financial Statements, continued

(8) Accounting for stock-based compensation, continued

If the compensation cost for issuances under our stock option plan and stock purchase plan had been determined based on the fair value as required by SFAS 123 for all awards, our pro forma net income and earnings per basic and diluted share for the three months ended April 1, 2005 would have been as follows (in thousands, except per share amounts):

	April 1, 2005 -----
Net earnings, as reported	\$ 5,109
Add: Stock-based compensation expense included in reported, net income, net of taxes	544
Deduct: Total stock-based compensation expense determined under fair value based method for all awards, net of taxes	(715)

Net earnings, adjusted	\$ 4,938

Edgar Filing: TECHNITROL INC - Form 10-Q

Basic and diluted earnings - as reported	\$ 0.13
Basic and diluted earnings - adjusted	\$ 0.12

(9) Pension

In the three months ended March 31, 2006 we were not required to, nor did we, make any contributions to our qualified pension plan. Our net periodic expense was approximately \$0.4 million in the three months ended March 31, 2006 and April 1, 2005, and is expected to be approximately \$1.5 million for the full fiscal year in 2006.

(10) Discontinued operations

In the second quarter of 2005, we received approximately \$6.7 million for the sale of AMI Doduco's bimetals and metal cladding operations. During the second quarter of 2005, we realized a gain of approximately \$1.4 million from the sale of approximately \$5.1 million of inventory and \$0.2 million of machinery and equipment. During the year ended December 30, 2005, we accrued \$1.3 million for severance and related payments resulting from the announcement to terminate manufacturing and support personnel and incurred other expenses related to the shutdown of operations. We also realized a \$1.1 million pension curtailment gain as a result of the reduced estimated future service period of the severed personnel. We have reflected the results of the bimetals and metal cladding operations as discontinued operations on the consolidated statements of operations for all periods presented. Summary results of operations for the bimetals and metal cladding operations were as follows (in thousands):

	Three Months Ended	
	March 31, 2006	April 1, 2005
Net sales	\$ --	\$ 5,472
(Loss) before income taxes	(120)	(523)

The net book value of the land and building was approximately \$1.4 million at March 31, 2006. These assets are included in other current assets on the consolidated balance sheets as the assets are held for sale.

Technitrol, Inc. and Subsidiaries

Notes to Unaudited Consolidated Financial Statements, continued

(11) Goodwill and other intangibles, net

The changes in the carrying amounts of goodwill for the three months ended March 31, 2006 was as follows (in thousands):

Balance at December 30, 2005	\$142,881
Goodwill acquired during the period	39,674
Purchase price allocation and other adjustment	306
Currency translation adjustment	730

Balance at March 31, 2006	\$183,591
	=====

Edgar Filing: TECHNITROL INC - Form 10-Q

The majority of our goodwill and other intangibles relate to our Pulse segment.

Other intangible assets were as follows (in thousands):

	March 31, 2006 -----
Intangible assets subject to amortization (definite lives):	
Technology	\$ 8,630
Customer relationships	17,449
Other	1,590

Total	\$ 27,669
Accumulated amortization:	
Technology	\$ (6,041)
Customer relationships	(1,540)
Other	(694)

Total	\$ (8,275)

Net tangible assets subject to amortization	\$ 19,394
Intangible assets not subject to amortization (indefinite lives):	
Tradename	\$ 11,644

Other intangibles, net	\$ 31,038
	=====

Amortization expense was \$1.0 million and \$0.5 million for the three months ended March 31, 2006 and April 1, 2005, respectively. Exclusive of ERA, which was acquired on January 4, 2006, for which the final purchase price allocation has not been completed, estimated annual amortization expense for each of the next five years is as follows (in thousands):

Year Ending	
2007	2,853
2008	2,782
2009	2,204
2010	1,858
2011	1,670

Item 2: Management's Discussion and Analysis of Financial Condition and Results of Operations

Introduction

This discussion and analysis of our financial condition and results of operations as well as other sections of this report contain certain

Edgar Filing: TECHNITROL INC - Form 10-Q

"forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995 and involve a number of risks and uncertainties. Actual results may differ materially from those anticipated in these forward-looking statements for many reasons, including the risks faced by us described in "Risk Factors" section of this report on page 27 through 33.

Critical Accounting Policies

The preparation of financial statements and related disclosures in conformity with U.S. generally accepted accounting principles requires us to make judgments, assumptions and estimates that affect the amounts reported in the Consolidated Financial Statements and accompanying notes. Note 1 to the Consolidated Financial Statements in our Annual Report on Form 10-K for the period ended December 30, 2005 describes the significant accounting policies and methods used in the preparation of the Consolidated Financial Statements. Estimates are used for, but not limited to, the accounting for inventory valuation, impairment of goodwill and other intangibles, severance and asset impairment expense, income taxes, and contingency accruals. Actual results could differ from these estimates. The following critical accounting policies are impacted significantly by judgments, assumptions and estimates used in the preparation of the Consolidated Financial Statements.

Inventory Valuation. We carry our inventories at lower of cost or market. We establish inventory provisions to write down excess and obsolete inventory to market value. We utilize historical trends and customer forecasts to estimate expected usage of on-hand inventory. In addition, inventory purchases are based upon future demand forecasts estimated by taking into account actual sales of our products over recent historical periods and customer forecasts. If there is a sudden and significant decrease in demand for our products or there is a higher risk of inventory obsolescence because of rapidly changing technology or customer requirements, we may be required to write down our inventory and our gross margin could be negatively affected. Conversely, if we were to sell or use a significant portion of inventory already written down, our gross margin could be positively affected.

Impairment of Goodwill and Other Intangibles. We assess the carrying cost of goodwill and intangible assets with indefinite lives on an annual basis and on an interim basis in certain circumstances. This assessment is based on comparing fair value to carrying cost. Fair value is based on estimating future cash flows using various growth assumptions and discounting based on a present value factor. Assigning a useful life and periodically reassessing a remaining useful life (for purposes of systematic amortization) is also predicated on various economic assumptions. Our intangible assets are also subject to impairment as a result of other factors such as changing technology, declines in demand that lead to excess capacity and other factors. In addition to the various assumptions, judgments and estimates mentioned above, we may strategically realign our resources and consider restructuring, disposing of, or otherwise exiting businesses in response to changes in industry or market conditions, which could result in an impairment of goodwill or other intangibles.

Severance and Asset Impairment Expense. We record severance, tangible asset and other restructuring charges such as lease terminations, in response to declines in demand that lead to excess capacity, changing technology and other factors. These costs are expensed during the period in which we determine that we will incur those costs, and all of the requirements for accrual are met in accordance with the applicable accounting guidance. Restructuring costs are recorded based upon our best estimates at the time, such as estimated residual values. Our actual expenditures for the restructuring activities may differ from the initially recorded costs. If this occurs, we could be required either to record additional expenses in future periods if our initial estimates were too low, or reverse part of the charges that we recorded initially if our initial

Edgar Filing: TECHNITROL INC - Form 10-Q

estimates were too high. In the case of acquisition-related restructuring costs,

16

depending on whether the assets impacted came from the acquired entity and the timing of the restructuring charge, such adjustment would generally require a change in value of the goodwill appearing on our balance sheet, which may not affect our earnings.

Income Taxes. We use the asset and liability method of accounting for income taxes. Under this method, income tax expense/benefit is recognized for the amount of taxes payable or refundable for the current year and for deferred tax liabilities and assets for the future tax consequences of events that have been recognized in an entity's financial statements or tax returns. We must make assumptions, judgments and estimates to determine our current provision for income taxes and also our deferred tax assets and liabilities and any valuation allowance to be recorded against a deferred tax asset. Our judgments, assumptions and estimates relative to the current provision for income tax take into account current tax laws, our interpretation of current tax laws and possible outcomes of current and future audits conducted by foreign and domestic tax authorities. Changes in tax law or our interpretation of tax laws and the resolution of current and future tax audits could significantly impact the amounts provided for income taxes in our consolidated financial statements. Our assumptions, judgments and estimates relative to the value of a deferred tax asset take in to account predictions of the amount and category of future taxable income. Actual operating results and the underlying amount and category of income in future years could render our current assumptions, judgments and estimates of recoverable net deferred taxes inaccurate. Any of the assumptions, judgments and estimates mentioned above could cause our actual income tax obligations to differ from our estimates.

Contingency Accruals. During the normal course of business, a variety of issues may arise, which may result in litigation, environmental compliance and other contingent obligations. In developing our contingency accruals we consider both the likelihood of a loss or incurrence of a liability as well as our ability to reasonably estimate the amount of exposure. We record contingency accruals when a liability is probable and the amount can be reasonably estimated. We periodically evaluate available information to assess whether contingency accruals should be adjusted. Our evaluation includes an assessment of legal interpretations, judicial proceedings, recent case law and specific changes or developments regarding known claims. We could be required to record additional expenses in future periods if our initial estimates were too low, or reverse part of the charges that we recorded initially if our estimates were too high.

Overview

We are a global producer of precision-engineered electronic components and electrical contact products and materials. We believe we are a leading global producer of these products and materials in the primary markets we serve based on our estimates of the size of our primary markets in annual revenues and our share of those markets relative to our competitors.

We operate our business in two distinct segments:

- o the electronic components segment, which operates under the name Pulse, and
- o the electrical contact products segment, which operates under the name AMI Doduco.

Edgar Filing: TECHNITROL INC - Form 10-Q

General. We define net sales as gross sales less returns and allowances. We sometimes refer to net sales as revenue.

Historically, the gross margin at Pulse has been significantly higher than at AMI Doduco. As a result, the mix of net sales generated by Pulse and AMI Doduco during a period affects our consolidated gross margin. Our gross margin is also significantly affected by capacity utilization, particularly in higher fixed-cost operations in AMI Doduco and Pulse's consumer, antenna and automotive divisions. AMI Doduco's gross margin is also affected by the price of precious and non-precious metals that are passed through to customers at nominal margins. Pulse's markets are characterized by relatively short product life cycles compared to AMI Doduco. As a result, significant product turnover occurs each year. Therefore, Pulse's changes in average selling prices do not necessarily provide a meaningful and quantifiable measure

17

of Pulse's operations. AMI Doduco has a relatively long-term and mature product line, with less turnover, and with less frequent variation in the prices of product sold, relative to Pulse. Many of AMI Doduco's products are sold under annual (or longer) purchase contracts. Therefore, AMI Doduco's revenues historically have not been subject to significant price fluctuations. In addition, sales growth and contraction at AMI Doduco, and Pulse's consumer, antenna and automotive divisions are generally attributable to changes in unit volume and changes in unit pricing, as well as foreign exchange rates, especially the U.S. dollar to the euro.

Acquisitions. Acquisitions have been an important part of our growth strategy. In many cases, our move into new product lines and extensions of our existing product lines or markets has been facilitated by an acquisition. Our acquisitions continually change the mix of our net sales. We have made numerous acquisitions in recent years which have increased our penetration into our primary markets and expanded our presence in new markets. We acquired a controlling interest in Full Rise Electronic Co., Ltd. ("FRE") in late 2004. FRE is based in the Republic of China (Taiwan) and manufactures connector products, including single and multiple-port jacks, and supplies such products to Pulse under a cooperation agreement. LK Products Oy ("LK") was acquired in September 2005 for approximately \$88.3 million, net of cash acquired. LK is based in Kempele, Finland, and is a leading producer of internal antennas and integrated modules for mobile communications and information devices. The purchase agreement includes a revenue-based earn-out provision whereby we will pay the seller one euro for each euro of revenue in excess of 85.0 million euro achieved by LK during the twelve months ended May 31, 2006. ERA Group ("ERA") was acquired in January 2006 for approximately \$53.8 million, net of cash acquired. ERA is based in Herrenberg, Germany and is a leading producer of electronic coils and transformers primarily for the European automotive market.

Divestiture. In the second quarter of 2005, we received approximately \$6.7 million for the sale of AMI Doduco's bimetal and metal cladding operations. We have reflected the results of the bimetal and metal cladding operations as discontinued operations on the Consolidated Statements of Operations for all periods presented.

Technology. Our business is continually affected by changes in technology, design, and preferences of consumers and other end users of our products, as well as changes in regulatory requirements. We address these changes by continuing to invest in new product development and by maintaining a diverse product portfolio which contains both mature and emerging technologies in order to meet customer demands.

Edgar Filing: TECHNITROL INC - Form 10-Q

Management Focus. Our executives focus on a number of important factors in evaluating our financial condition and operational performance. We use economic profit, which we define as operating profit after tax, less our cost of capital. Revenue growth, gross profit as a percentage of revenue, and operating profit as a percent of revenue are also among these factors. Operating leverage or incremental operating profit as a percentage of incremental sales is a factor that is discussed frequently, as this is believed to reflect the benefit of absorbing fixed overhead and operating expenses. In evaluating working capital management, liquidity and cash flow, our executives also use performance measures such as days sales outstanding, days payable outstanding, inventory turnover and cash conversion efficiency. The continued success of our business is largely dependent on meeting and exceeding our customers' expectations. Therefore, non-financial performance measures relating to on-time delivery and quality assist our management in monitoring customer satisfaction on an on-going basis.

Cost Reduction Programs. Our manufacturing model for Pulse's legacy business has a very high variable cost component due to the labor-intensity of many processes, which allows us to quickly change our capacity based on market demand. The Pulse consumer, antenna and automotive divisions, however, are capital intensive and therefore more sensitive to volume changes. AMI Doduco has a higher fixed cost component of manufacturing activity than Pulse, as it is more capital intensive. Therefore, AMI Doduco is unable to expand or contract its capacity as quickly as Pulse in response to market demand, although significant actions have been taken to align AMI Doduco's capacity with current market demand.

18

As a result of our continuing focus on both economic and operating profit, we will continue to aggressively size both Pulse and AMI Doduco so that costs are optimally matched to current and anticipated future revenue and unit demand. We will also continue to pursue additional growth opportunities. The amounts of additional charges will depend on specific actions taken. The actions taken over the past several years such as plant closures, plant relocations, asset impairments and reduction in personnel worldwide have resulted in the elimination of a variety of costs. The majority of these costs represent the annual salaries and benefits of terminated employees, both those directly related to manufacturing and those providing selling, general and administrative services, as well as lower overhead costs related to factory relocations to lower-cost locations. The eliminated costs also include depreciation savings from disposed equipment. We have implemented a succession of cost reduction initiatives and programs.

During 2005, we accrued \$7.0 million to streamline operations at Pulse and AMI Doduco. We also recorded a \$46.0 million impairment charge for Pulse's consumer division.

Thus far in 2006, we accrued \$0.9 million for the termination and plant shutdown costs resulting from the transfer of production operations at Pulse's facilities in Turkey to China and termination and plant shutdown costs resulting from the transfer of production operations at AMI Doduco's facility in Italy to Spain.

International Operations. As of March 31, 2006, we had manufacturing operations in 10 countries and had no significant net sales in currencies other than the U.S. dollar and the euro. A large percentage of our sales in recent years have been outside of the United States. Changing exchange rates often impact our financial results and our period-over-period comparisons. This is

Edgar Filing: TECHNITROL INC - Form 10-Q

particularly true of movements in the exchange rate between the U.S. dollar and the euro. AMI Doduco's European and Pulse's consumer, antenna and automotive division sales are denominated primarily in euro, and euro-denominated sales and earnings may result in higher or lower dollar sales and net earnings upon translation for our U.S. consolidated financial statements. We may also experience a positive or negative translation adjustment to equity because our investments in Pulse's consumer, antenna and automotive divisions and AMI Doduco's European operations may be worth more or less in U.S. dollars after translation for our U. S. consolidated financial statements. Our Euro-denominated operations may incur foreign currency gains or losses as euro-denominated transactions are remeasured to U.S. dollars for financial reporting purposes. If a higher percentage of our sales is denominated in non-U.S. currencies, increased exposure to currency fluctuations may result.

In order to reduce our exposure resulting from currency fluctuations, we may purchase currency exchange forward contracts and/or currency options. These contracts guarantee a predetermined range of exchange rates at the time the contract is purchased. This allows us to shift the majority of the risk of currency fluctuations from the date of the contract to a third party for a fee. As of March 31, 2006, we had one foreign currency forward contract outstanding to sell forward approximately 51.4 million euros in order to hedge intercompany loans.

Precious Metals. AMI Doduco uses silver, as well as other precious metals, in manufacturing some of its electrical contacts, contact materials and contact subassemblies. Historically, we have leased or held these materials through consignment-type arrangements with our suppliers. Leasing and consignment costs have typically been below the costs to borrow funds to purchase the metals, and more importantly, these arrangements eliminate the effects of fluctuations in the market price of owned precious metal and enable us to minimize our inventories. AMI Doduco's terms of sale generally allow us to charge customers for precious metal content based on market value of precious metal on the day after shipment to the customer. Thus far we have been successful in managing the costs associated with our precious metals. While limited amounts are purchased for use in production, the majority of our precious metal inventory continues to be leased or held on consignment. If our leasing/consignment fees increase significantly in a short period of time, and we are unable to recover these increased costs through higher sale prices, a

19

negative impact on our results of operations and liquidity may result. Leasing/consignment fee increases are caused by increases in interest rates or volatility in the price of the consigned material.

Income Taxes. Our effective income tax rate is affected by the proportion of our income earned in high-tax jurisdictions such as those in Europe and the income earned in low-tax jurisdictions, particularly Izmir, Turkey, Tunisia and the People's Republic of China. This mix of income can vary significantly from one period to another. We have benefited over recent years from favorable tax incentives, however, there is no guarantee as to how long these benefits will continue to exist.

In October 2004, the American Jobs Creation Act of 2004 ("AJCA") was signed into law. The AJCA contained a series of provisions, several of which are pertinent to us. The AJCA created a temporary incentive for U.S. multi-national corporations to repatriate accumulated income abroad by providing an 85% dividends received deduction for certain dividends from controlled foreign corporations. Based on this legislation and 2005 guidance by the Department of Treasury, we repatriated \$52 million of foreign earnings in the fourth quarter

Edgar Filing: TECHNITROL INC - Form 10-Q

of 2005, net of a charge of \$7.3 million as income taxes. Prior to the passage of the AJCA, the undistributed earnings of our foreign subsidiaries, with the exception of approximately \$40 million, were considered to be indefinitely reinvested, and in accordance with APB Opinion No. 23 ("APB 23"), Accounting for Income Taxes - Special Areas, no provision for U.S. federal or state income taxes had been provided on these undistributed earnings. The remaining offshore earnings, with the exception of approximately \$40 million, are intended to be indefinitely invested abroad and no provision for U.S. federal or state income taxes has been provided in accordance with APB 23.

Except in limited circumstances, we have not provided for U.S. federal income and foreign withholding taxes on our non-U.S. subsidiaries' undistributed earnings as per Accounting Principles Board Opinion No. 23, Accounting for Income Taxes - Special Areas. Such earnings include pre-acquisition earnings of foreign entities acquired through stock purchases, and are intended to be reinvested outside of the U.S. indefinitely. Where excess cash has accumulated in our non-U.S. subsidiaries and it is advantageous for tax reasons, subsidiary earnings may be remitted.

Results of Operations

Three months ended March 31, 2006 compared to the three months ended April 1, 2005

Net Sales. Net sales for the three months ended March 31, 2006 increased \$79.7 million, or 56.4%, to \$221.1 million from \$141.4 million in the three months ended April 1, 2005. Our sales increase from the comparable period in prior year was primarily attributable to the consolidation of LK's, which we refer to as the antenna division, and ERA's, which we refer to as the automotive division, net sales with Pulse's net sales beginning in September 2005 and January 2006, respectively, increased demand in Pulse's networking, telecommunications, power conversion and military/aerospace divisions and higher pass-through costs for silver and other metals at AMI Doduco, which were partially offset by weakness in Pulse's consumer division.

Pulse's net sales increased \$68.6 million, or 90.7%, to \$144.2 million for the three months ended March 31, 2006 from \$75.6 million in the three months ended April 1, 2005. This increase was primarily attributable to the consolidation of the antenna and automotive division's net sales with Pulse's net sales beginning on in September 2005 and January, 2006, respectively. Net sales in Pulse's legacy business (networking, telecommunications, power conversion and military/aerospace) were stronger in the current period than in the prior year period, while Pulse's consumer division experienced continued weakness.

AMI Doduco's net sales increased \$11.1 million, or 16.9 %, to \$76.9 million for the three months ended March 31, 2006 from \$65.8 million in the three months ended April 1, 2005. Sales in the 2006 period compared to the 2005 period reflect higher pass-through costs for silver and other metals and increased global demand.

20

Cost of Sales. As a result of higher sales, our cost of sales increased \$62.5 million, or 58.2%, to \$169.9 million for the three months ended March 31, 2006 from \$107.4 million for the three months ended April 1, 2005. Our consolidated gross margin for the three months ended March 31, 2006 was 23.1% compared to 24.0% for the three months ended April 1, 2005. Our consolidated gross margin in 2006 was impacted by the addition of Pulse's automotive division, whose operations are pending integration with Pulse, and unabsorbed

Edgar Filing: TECHNITROL INC - Form 10-Q

capacity in the Pulse consumer division partially offset by improved capacity utilization at AMI Doduco.

Selling, General and Administrative Expenses. Total selling, general and administrative expenses for the three months ended March 31, 2006 increased \$9.5 million, or 37.1%, to \$35.1 million, or 15.9 % of net sales, from \$25.6 million, or 18.1% of net sales for the three months ended April 1, 2005. Increased spending was a result of the inclusion of the Pulse antenna and automotive division's expenses in the 2006 period and higher incentive compensation expense. Partially offsetting these expenses were the favorable impact of restructuring actions that we took over the last year to reduce costs.

Research, development and engineering expenses are included in selling, general and administrative expenses. We refer to research, development and engineering expenses as RD&E. For the three months ended March 31, 2006 and April 1, 2005 respectively, RD&E by segment was as follows (in thousands):

	2006	2005
	----	----
Pulse	\$8,185	\$4,780
Percentage of segment sales	5.7%	6.3%
AMI Doduco	\$1,232	\$1,183
Percentage of segment sales	1.6%	1.8%

Higher RD&E spending in 2006 over the comparable period in 2005 is a result of the inclusion of Pulse antenna division spending since September 2005 and Pulse automotive division spending since January 2006. We believe that future sales in the electronic components markets will be driven by next-generation products. Design and development activities with our OEM customers continue at an aggressive pace.

Severance and Asset Impairment Expense. Severance and asset impairment expense was \$0.9 for the three months ended March 31, 2006 and April 1, 2005.

Interest. Net interest expense was \$0.7 million for the three months ended March 31, 2006 compared to net interest income of \$ 0.2 million for the three months ended April 1, 2005. The increase in net interest expense is primarily a result of interest charges on borrowings from our multi-currency credit facility and a lower average balance of invested cash in 2006 over the comparable period in 2005. Additionally, a result of increasing silver pricing and silver leasing costs, silver leasing fees were \$0.2 million higher in 2006 over the comparable period in 2005.

Other. Other income (expense) was \$0.5 million for the three months ended March 31, 2006 versus \$(0.4) million for the three months ended April 1, 2005.

Income Taxes. The effective income tax rate for the three months ended March 31, 2006 was 18.6% compared to 21.7% for the three months ended April 1, 2005. The reduction in the effective income tax rate is a result of an increase in pre-tax earnings in low tax jurisdictions in 2006 as compared to the comparable period in 2005.

Liquidity and Capital Resources

Working capital as of March 31, 2006 was \$165.4 million compared to \$209.8 million as of December 30, 2005, a decrease of \$44.4 million. Cash and cash equivalents, which is included in working capital, decreased from \$173.7 million

Edgar Filing: TECHNITROL INC - Form 10-Q

as of December 30, 2005 to \$65.8 million as of March 31, 2006, a decrease of \$107.9 million. This decrease in cash related primarily to cash used in the acquisition of Pulse's automotive division in January 2006, changes in the working capital of Pulse's automotive division subsequent to the acquisition date and the repayment of approximately \$50.0 million of debt. At each balance sheet date, components of working capital will be affected by various items such as operating activities, foreign exchange rate changes, and acquisitions.

Net cash used in operating activities was \$1.1 million for the three months ended March 31, 2006 as compared to \$15.1 million of net cash provided by operating activities in the comparable period of 2005, a decrease of \$16.2 million. This decrease is primarily attributable to working capital changes of \$22.1 million during the three months ended March 31, 2006, as compared to the three months ended April 1, 2005, and is a result of increases in accounts receivable and inventory which were not fully offset by increases in accounts payable. The increase in accounts receivable partially reflects the increased price of precious metals not yet collected from AMI Doduco customers. However, we are attempting to offset the negative working capital increases resulting from increased silver prices by changing terms with our customers to better reflect our payment terms with our silver suppliers.

We present our statement of cash flows using the indirect method as permitted under Financial Accounting Standards Board Statement No. 95, Statement of Cash Flows. Our management has found that investors and analysts typically refer to changes in accounts receivable, inventory, and other components of working capital when analyzing operating cash flows. Also, changes in working capital are more directly related to the way we manage our business for cash flow than are items such as cash receipts from the sale of goods, as would appear using the direct method.

Capital expenditures were \$5.7 million during the three months ended March 31, 2006 and \$4.0 million in the comparable period of 2005. We make capital expenditures to expand production capacity, improve our operating efficiency, and enhance workplace safety. We plan to continue making such expenditures in the future as and when necessary.

We used \$3.5 million for dividend payments during the three months ended March 31, 2006 for dividends declared in 2005. On February 2, 2006, we announced a quarterly dividend of \$0.0875 per common share, payable on April 21, 2006 to shareholders of record on April 7, 2006. This quarterly dividend will result in a cash payment to shareholders of approximately \$3.5 million in the second quarter of 2006. On April 28, 2006 we announced a quarterly cash dividend of \$0.0875 per common share, payable on July 21, 2006 to shareholders of record on July 7, 2006. This quarterly dividend will result in a cash payment to shareholders of approximately \$3.5 million in the third quarter of 2006.

We used \$54.1 million for acquisitions during the three months ended March 31, 2006, net of cash acquired. The 2006 expenditure related primarily to our acquisition of Pulse's automotive division in January 2006. We may acquire other businesses or product lines to expand our breadth and scope of operations.

During the third quarter of 2006, it is likely that we will have to pay 15 to 20 million euros related to our acquisition of the antenna division. This payment is a result of the previously disclosed revenue-based earnout provision whereby we will pay the seller one euro for each euro of revenue in excess of 85 euros million achieved by the antenna division during the twelve months ended May 31, 2006. This contingency was not resolved as of March 31, 2006 and therefore is not recorded on our Consolidated Balance Sheet at such date. This payment will be included as goodwill, when paid.

Edgar Filing: TECHNITROL INC - Form 10-Q

We entered into a credit agreement on October 14, 2005 providing for \$200.0 million of credit capacity. The facility consists of an aggregate U.S. dollar-equivalent revolving line of credit in the principal amount of up to \$200.0 million, and provides for borrowings in multiple currencies including but not limited to, U.S. dollars, euros, and Japanese yen, including individual sub-limits of:

- a U.S. dollar-based swing-line loan not to exceed \$20.0 million;
- a multicurrency facility providing for the issuance of letters of credit in an aggregate amount not to exceed the U.S. dollar equivalent of \$25.0 million; and
- a Singapore sub-facility not to exceed the U.S. dollar equivalent of \$50.0 million.

The credit agreement permits us to request one or more increases in the total commitment not to exceed \$100.0 million, provided the minimum increase is \$25.0 million, subject to bank approval.

The total amount outstanding under the credit facility may not exceed \$200.0 million, provided we do not request an increase in total commitment as noted above.

Outstanding borrowings are subject to two financial covenants, which are both computed on a rolling twelve-month basis as of the most recent quarter-end. The first is maximum debt outstanding amounting to three and one-half times our earnings before interest, taxes, depreciation and amortization (EBITDA), as defined by the credit agreement. The second is maximum debt service expenses amounting to two and one-half times our cash interest expense, as defined by the credit agreement. The credit agreement also contains covenants specifying capital expenditure limitations and other customary and normal provisions. We are in compliance with these covenants as of March 31, 2006.

We pay a commitment fee on the unborrowed portion of the commitment, which ranges from 0.15% to 0.25% of the total commitment, depending on our debt-to-EBITDA ratio, as defined above. The interest rate for each currency's borrowing will be a combination of the base rate for that currency plus a credit margin spread. The base rate is different for each currency. The credit margin spread is the same for each currency and is 0.60% to 1.25%, depending on our debt-to-EBITDA ratio, as defined in the credit agreement. Each of our domestic subsidiaries with net worth equal to or greater than \$10 million has guaranteed all obligations incurred under the credit facility.

Simultaneously with the execution of our current credit agreement, we terminated our previous \$125.0 million credit agreement, dated June 17, 2004.

We also have an obligation outstanding due in August 2009 under an unsecured term loan agreement with Sparkasse Pforzheim, for the borrowing of approximately 5.1 million euros.

At March 31, 2006, our balance sheet includes \$3.6 million of outstanding debt of Full Rise Electronic Co., Ltd. in connection with our consolidation of FRE's financial statements. FRE has a total credit limit of approximately \$6.3 million in U.S. dollar equivalents as of March 31, 2006. Neither Technitrol, nor any of its subsidiaries, has guaranteed or otherwise participated in the credit facilities of FRE or assumed any responsibility for the current or future indebtedness of FRE.

We had three standby letters of credit outstanding at March 31, 2006 in

Edgar Filing: TECHNITROL INC - Form 10-Q

the aggregate amount of \$1.0 million securing transactions entered into in the ordinary course of business.

We had commercial commitments outstanding at March 31, 2006 of approximately \$127.1 million due under precious metal consignment-type leases. This represents an increase of \$39.3 million from the \$87.8 million outstanding as of December 30, 2005 and is primarily attributable to higher average silver prices at March 31, 2006.

23

We believe that the combination of cash on hand, cash generated by operations and, if necessary, borrowings under our credit agreement will be sufficient to satisfy our operating cash requirements in the foreseeable future. In addition, we may use internally generated funds or obtain borrowings or equity offerings for acquisitions of suitable businesses or assets.

All retained earnings are free from legal or contractual restrictions as of March 31, 2006, with the exception of approximately \$16.2 million of retained earnings primarily in the PRC, that are restricted in accordance with Section 58 of the PRC Foreign Investment Enterprises Law. Included in the \$16.2 million is \$1.8 million of retained earnings of FRE of which we own 57%. The amount restricted in accordance with the PRC Foreign Investment Enterprise Law is applicable to all foreign investment enterprises doing business in the PRC. The restriction applies to 10% of our net earnings in the PRC, limited to 50% of the total capital invested in the PRC. We have not experienced any significant liquidity restrictions in any country in which we operate and none are foreseen. However, foreign exchange ceilings imposed by local governments and the sometimes lengthy approval processes which foreign governments require for international cash transfers may delay our internal cash movements from time to time. We expect to reinvest these earnings outside of the United States because we anticipate that a significant portion of our opportunities for growth in the coming years will be abroad. If these earnings were brought back to the United States, significant tax liabilities could be incurred in the United States as several countries in which we operate have tax rates significantly lower than the U.S. statutory rate. Additionally, we have not accrued U.S. income and foreign withholding taxes on foreign earnings that have been indefinitely invested abroad.

In October 2004, the American Jobs Creation Act of 2004 ("AJCA") was signed into law. The AJCA contained a series of provisions, several of which are pertinent to us. The AJCA created a temporary incentive for U.S. multi-national corporations to repatriate accumulated income abroad by providing an 85% dividends received deduction for certain dividends received from controlled foreign corporations. Based on this legislation and 2005 guidance by the Department of Treasury, we repatriated \$52 million of foreign earnings in the fourth quarter of 2005, net of \$7.3 million as income taxes. Prior to the passage of the AJCA, the undistributed earnings of our foreign subsidiaries, with the exception of approximately \$40 million, were considered to be indefinitely reinvested, and in accordance with APB Opinion No. 23 ("APB 23"), Accounting for Income Taxes - Special Areas, no provision for U.S. federal or state income taxes had been provided on these undistributed earnings. The remaining offshore earnings, with the exception of approximately \$40 million, are intended to be indefinitely invested abroad and no provision for U.S. federal or state income taxes has been provided in accordance with APB 23.

Item 3: Quantitative and Qualitative Disclosures about Market Risk

There were no material changes in market risk exposures that affect the quantitative and qualitative disclosures presented in our Form 10-K for the year

Edgar Filing: TECHNITROL INC - Form 10-Q

ended December 30, 2005.

Item 4: Controls and Procedures

An evaluation was performed under the supervision and with the participation of our Chief Executive Officer and Chief Financial Officer, of the effectiveness of the design and operation of the disclosure controls and procedures pursuant to Rule 13a-15 under the Exchange Act of 1934 as of March 31, 2006. Based upon that evaluation, the Chief Executive Officer and Chief Financial Officer have concluded that the disclosure controls and procedures are effective to ensure that information required to be disclosed by us in the reports that we file or submit is recorded, processed, summarized and reported, as specified in the Commission's rules and forms. Disclosure controls and procedures include, without limitation, controls and procedures designed to ensure that information required to be disclosed by an issuer in the reports that it files or submits under the Act is accumulated and communicated to the issuer's management, including its principal executive and principal financial officers, or persons performing similar functions, as appropriate to allow timely decisions regarding required disclosure.

24

There were no changes in these controls or procedures that occurred during the three months ended March 31, 2006 that have materially affected, or are reasonably likely to materially affect, these controls or procedures. However, we completed the acquisition of LK Products Oy on September 8, 2005 and we are still in the process of evaluating internal control over financial reporting at LK Products Oy. In addition, in January 2006, we acquired all of the capital stock of ERA Group ("ERA"), headquartered in Herrenberg, Germany, and we are still in the process of evaluating internal control over financial reporting at ERA Group. Accordingly, we have not included LK Products Oy and ERA Group in our evaluation of internal control over financial reporting for the quarter ended March 31, 2006.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements. Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

26

Item 1a: Risk Factors

Factors That May Affect Our Future Results (Cautionary Statements for Purposes of the "Safe Harbor" Provisions of the Private Securities Litigation Reform Act of 1995)

Our disclosures and analysis in this report contain forward-looking statements. Forward-looking statements reflect our current expectations of future events or future financial performance. You can identify these statements by the fact that they do not relate strictly to historical or current facts. They often use words such as "anticipate", "estimate", "expect", "project", "intend", "plan", "believe", and similar terms. These forward-looking statements are based on our current plans and expectations.

Any or all of our forward-looking statements in this report may prove to be incorrect. They may be affected by inaccurate assumptions we might make or by risks and uncertainties which are either unknown or not fully known or understood. Accordingly, actual outcomes and results may differ materially from what is expressed or forecasted in this report.

We sometimes provide forecasts of future financial performance. The risks and uncertainties described under "Risk Factors" as well as other risks identified from time to time in other Securities and Exchange Commission reports, registration statements and public announcements, among others, should be considered in evaluating our prospects for the future. We undertake no obligation to release updates or revisions to any forward-looking statement, whether as a result of new information, future events or otherwise.

Cyclical changes in the markets we serve could result in a significant decrease in demand for our products and reduce our profitability.

Our components are used in various products for the electronic and electrical equipment markets. These markets are highly cyclical. The demand for our components reflects the demand for products in the electronic and electrical equipment markets generally. A contraction in demand would result in a decrease in sales of our products, as our customers:

- o may cancel many existing orders;

Edgar Filing: TECHNITROL INC - Form 10-Q

- o may introduce fewer new products; and
- o may decrease their inventory levels.

A decrease in demand for our products would have a significant adverse effect on our operating results and profitability. Accordingly, we may experience volatility in both our revenues and profits.

Reduced prices for our products may adversely affect our profit margins if we are unable to reduce our costs of production.

The average selling prices for our products tend to decrease over their life cycle. In addition, foreign currency movements and the need to retain market share increase the pressure on our customers to seek lower prices from their suppliers. As a result, our customers are likely to continue to demand lower prices from us. To maintain our margins and remain profitable, we must continue to meet our customers' design needs while reducing costs through efficient raw material procurement and process and product improvements. Our profit margins will suffer if we are unable to reduce our costs of production as sales prices decline.

An inability to adequately respond to changes in technology or customer needs may decrease our sales.

Pulse operates in an industry characterized by rapid change caused by the frequent emergence of new technologies. Generally, we expect life cycles for our products in the electronic components industry to be relatively short. This requires us to anticipate and respond rapidly to changes in industry standards and customer needs and to develop and introduce new and enhanced products on a timely and cost effective basis. Our engineering and development teams place a priority on working closely with our customers to design

27

innovative products and improve our manufacturing processes. Our inability to react to changes in technology or customer needs quickly and efficiently may decrease our sales, thus reducing profitability.

If our inventories become obsolete, our future performance and operating results will be adversely affected.

The life cycles of our products depend heavily upon the life cycles of the end products into which our products are designed. Many of Pulse's products have very short life cycles which are measured in quarters. Products with short life cycles require us to closely manage our production and inventory levels. Inventory may become obsolete because of adverse changes in end market demand. During market slowdowns, this may result in significant charges for inventory write-offs. Our future operating results may be adversely affected by material levels of obsolete or excess inventories.

An inability to capitalize on our recent or future acquisitions may adversely affect our business.

We have completed several acquisitions in recent years. We continually seek acquisitions to grow our business. We may fail to derive significant benefits from our acquisitions. In addition, if we fail to achieve sufficient financial performance from an acquisition, goodwill and other intangibles could become impaired, resulting in our recognition of a loss. In 2005, we recorded a \$46.0 million impairment charge related to Pulse's consumer division. In 2004,

Edgar Filing: TECHNITROL INC - Form 10-Q

we recorded an aggregate intangible impairment charge of \$18.5 million related to Pulse. The success of any of our acquisitions depends on our ability to:

- o successfully integrate or consolidate acquired operations into our existing businesses;
- o develop or modify the financial reporting and information systems of the acquired entity to ensure overall financial integrity and adequacy of internal control procedures;
- o identify and take advantage of cost reduction opportunities; and
- o further penetrate the markets for the product capabilities acquired.

Integration of acquisitions may take longer than we expect and may never be achieved to the extent originally anticipated. This could result in lower than anticipated business growth or higher than anticipated costs. In addition, acquisitions may:

- o cause a disruption in our ongoing business;
- o distract our managers;
- o unduly burden our other resources; and
- o result in an inability to maintain our historical standards, procedures and controls, which may result in non-compliance with external laws and regulations.

Integration of acquisitions into the acquiring segment may limit the ability of investors to track the performance of individual acquisitions and to analyze trends in our operating results.

Our historical practice has been to rapidly integrate acquisitions into the existing business of the acquiring segment and to report financial performance on the segment level. As a result of this practice, we do not separately track the stand-alone performance of acquisitions after the date of the transaction. Consequently, investors cannot quantify the financial performance and success of any individual acquisition or the financial performance and success of a particular segment excluding the impact of acquisitions. In addition, our practice of rapidly integrating acquisitions into the financial performance of each segment may limit the ability of investors to analyze any trends in our operating results over time.

An inability to identify additional acquisition opportunities may slow our future growth.

We intend to continue to identify and consummate additional acquisitions to further diversify our business and to penetrate important markets. We may not be able to identify suitable acquisition candidates at reasonable prices. Even if we identify promising acquisition candidates, the timing, price, structure and

success of future acquisitions are uncertain. An inability to consummate attractive acquisitions may reduce our growth rate and our ability to penetrate new markets.

If our customers terminate their existing agreements, or do not enter into new

Edgar Filing: TECHNITROL INC - Form 10-Q

agreements or submit additional purchase orders for our products, our business will suffer.

Most of our sales are made on a purchase order basis, as needed by our customers. In addition, to the extent we have agreements in place with our customers, most of these agreements are either short term in nature or provide our customers with the ability to terminate the arrangement with little or no prior notice. Such agreements typically do not provide us with any material recourse in the event of non-renewal or early termination. We will lose business and our revenues will decrease if a significant number of customers:

- o do not submit additional purchase orders;
- o do not enter into new agreements with us; or
- o elect to terminate their relationship with us.

If we do not effectively manage our business in the face of fluctuations in the size of our organization, our business may be disrupted.

We have grown over the last ten years, both organically and as a result of acquisitions. However, we significantly reduce or expand our workforce and facilities in response to rapid changes in demand for our products due to prevailing global market conditions. These rapid fluctuations place strains on our resources and systems. If we do not effectively manage our resources and systems, our businesses may be adversely affected.

Uncertainty in demand for our products may result in increased costs of production, an inability to service our customers, or higher inventory levels which may adversely affect our results of operations and financial condition.

We have very little visibility into our customers' purchasing patterns and are highly dependent on our customers' forecasts. These forecasts are non-binding and often highly unreliable. Given the fluctuation in growth rates and cyclical demand for our products, as well as our reliance on often-imprecise customer forecasts, it is difficult to accurately manage our production schedule, equipment and personnel needs and our raw material and working capital requirements. Our failure to effectively manage these issues may result in:

- o production delays;
- o increased costs of production;
- o excessive inventory levels and reduced financial liquidity;
- o an inability to make timely deliveries; and
- o a decrease in profits.

A decrease in availability or increase in cost of our key raw materials could adversely affect our profit margins.

We use several types of raw materials in the manufacturing of our products, including:

- o precious metals such as silver;
- o other base metals such as copper and brass; and
- o ferrite cores.

Some of these materials are produced by a limited number of suppliers.

Edgar Filing: TECHNITROL INC - Form 10-Q

From time to time, we may be unable to obtain these raw materials in sufficient quantities or in a timely manner to meet the demand for our products. The lack of availability or a delay in obtaining any of the raw materials used in our products could adversely affect our manufacturing costs and profit margins. In addition, if the price of our raw materials increases significantly over a short period of time, customers may be unwilling to bear the increased price for

29

our products and we may be forced to sell our products containing these materials at prices that reduce our profit margins.

Some of our raw materials, such as precious metals, are considered commodities and are subject to price volatility. We attempt to limit our exposure to fluctuations in the cost of precious materials, including silver, by holding the majority of our precious metal inventory through leasing or consignment arrangements with our suppliers. We then typically purchase the precious metal from our supplier at the current market price on the day after delivery to our customer and pass this cost on to our customer. In addition, leasing and consignment costs have historically been substantially below the costs to borrow funds to purchase the precious metals. We currently have four consignment or leasing agreements related to precious metals, all of which generally have one year terms with varying maturity dates, but can be terminated by either party with 30 days' prior notice. Our results of operations and liquidity will be negatively impacted if:

- o we are unable to enter into new leasing or consignment arrangements with similarly favorable terms after our existing agreements terminate, or
- o our leasing or consignment fees increase significantly in a short period of time and we are unable to recover these increased costs through higher sale prices.

Fees charged by the consignor are driven by interest rates and the market price of the consigned material. The market price of the consigned material is determined by the supply of, and the demand for, the material. Consignment fees may increase if interest rates or the price of the consigned material increase.

Competition may result in lower prices for our products and reduced sales.

Both Pulse and AMI Doduco frequently encounter strong competition within individual product lines from various competitors throughout the world. We compete principally on the basis of:

- o product quality and reliability;
- o global design and manufacturing capabilities;
- o breadth of product line;
- o customer service;
- o price; and
- o on-time delivery.

Our inability to successfully compete on any or all of the above factors may result in reduced sales.

Edgar Filing: TECHNITROL INC - Form 10-Q

Our backlog is not an accurate measure of future revenues and is subject to customer cancellation.

While our backlog consists of firm accepted orders with an express release date generally scheduled within nine months of the order, many of the orders that comprise our backlog may be canceled by customers without penalty. It is widely known that customers in the electronics industry have on occasion double and triple-ordered components from multiple sources to ensure timely delivery when quoted lead time is particularly long. In addition, customers often cancel orders when business is weak and inventories are excessive. Although backlog should not be relied on as an indicator of our future revenues, our results of operations could be adversely impacted if customers cancel a material portion of orders in our backlog.

Fluctuations in foreign currency exchange rates may adversely affect our operating results.

We manufacture and sell our products in various regions of the world and export and import these products to and from a large number of countries. Fluctuations in exchange rates could negatively impact our cost of production and sales that, in turn, could decrease our operating results and cash flow. In addition, if the functional currency of our manufacturing costs strengthened compared to the functional currency of our competitors manufacturing costs, our products may get more costly than our competitors. Although we engage in limited hedging transactions, including foreign currency contracts, to reduce our transaction and

30

economic exposure to foreign currency fluctuations, these measures may not eliminate or substantially reduce our risk in the future.

Our international operations subject us to the risks of unfavorable political, regulatory, labor and tax conditions in other countries.

We manufacture and assemble most of our products in locations outside the United States, including the Peoples' Republic of China, or PRC, Hungary, Turkey, and Tunisia and a majority of our revenues are derived from sales to customers outside the United States. Our future operations and earnings may be adversely affected by the risks related to, or any other problems arising from, operating in international markets.

Risks inherent in doing business internationally may include:

- o economic and political instability;
- o expropriation and nationalization;
- o trade restrictions;
- o capital and exchange control programs;
- o transportation delays;
- o foreign currency fluctuations; and
- o unexpected changes in the laws and policies of the United States or of the countries in which we manufacture and sell our products.

Pulse has substantially all of its manufacturing operations in the PRC,

Edgar Filing: TECHNITROL INC - Form 10-Q

except for LK and ERA. Our presence in the PRC has enabled Pulse to maintain lower manufacturing costs and to adjust our work force to demand levels for our products. Although the PRC has a large and growing economy, the potential economic, political, legal and labor developments entail uncertainties and risks. For example, in May 2005 the local government in the PRC increased wages in the southern coastal provinces of the PRC by 17%. While the PRC has been receptive to foreign investment, we cannot be certain that its current policies will continue indefinitely into the future. In the event of any changes that adversely affect our ability to conduct our operations within the PRC, our businesses may suffer. We also have manufacturing operations in Turkey and Tunisia, which are subject to unique risks, including earthquakes and those associated with Middle East geo-political events.

We have benefited over recent years from favorable tax treatment as a result of our international operations. We operate in countries where we realize favorable income tax treatment relative to the U.S. statutory rate. We have also been granted special tax incentives commonly known as tax holidays in countries such as the PRC, Hungary, and Turkey. This favorable situation could change if these countries were to increase rates or revoke the special tax incentives, or if we discontinue our manufacturing operations in any of these countries and do not replace the operations with operations in other locations with favorable tax incentives. Accordingly, in the event of changes in laws and regulations affecting our international operations, we may not be able to continue to take advantage of similar benefits in the future.

Shifting our operations between regions may entail considerable expense.

In the past we have shifted our operations from one region to another in order to maximize manufacturing and operational efficiency. We may close one or more additional factories in the future. This could entail significant one-time earnings charges to account for severance, equipment write-offs or write-downs and moving expenses, as well as certain adverse tax consequences including the loss of specialized tax incentives. In addition, as we implement transfers of our operations we may experience disruptions, including strikes or other types of labor unrest resulting from layoffs or termination of employees.

Liquidity requirements could necessitate movements of existing cash balances which may be subject to restrictions or cause unfavorable tax and earnings consequences.

A significant portion of our cash is held offshore by our international subsidiaries and is predominantly denominated in U.S. dollars. While we intend to use a significant amount of the cash held overseas to fund our international operations and growth, if we encounter a significant domestic need for liquidity, such as paying dividends, that we cannot fulfill through borrowings, equity offerings, or other internal or external sources, we may experience unfavorable tax and earnings consequences if this cash is transferred to the United States. These adverse consequences would occur if the transfer of cash into the United States is taxed and no offsetting foreign tax credit is available to offset the U.S. tax liability, resulting in lower earnings. In addition, we may be prohibited from transferring cash from the PRC. With the exception of approximately \$16.2 million of retained earnings as of December 30, 2005 in primarily the PRC that are restricted in accordance with the PRC Foreign Investment Enterprises Law, substantially all retained earnings are free from legal or contractual restrictions. The PRC Foreign Investment Enterprise Law restricts 10% of our net earnings in the PRC, up to a maximum amount equal to 50% of the total capital we have invested in the PRC. We have not experienced any significant liquidity restrictions in any country in which we operate and

Edgar Filing: TECHNITROL INC - Form 10-Q

none are presently foreseen. However, foreign exchange ceilings imposed by local governments and the sometimes-lengthy approval processes which some foreign governments require for international cash transfers may delay our internal cash movements from time to time.

In October 2004, the American Jobs Creation Act of 2004 ("AJCA") was signed into law. The AJCA contained a series of provisions, several of which were pertinent to us. The AJCA created a temporary incentive for U.S. multi-national corporations to repatriate accumulated income abroad by providing an 85% dividends received deduction for certain dividends received from controlled foreign corporations. Based on this legislation and 2005 guidance by the Department of Treasury, we repatriated \$52 million of foreign earnings in the fourth quarter of 2005, net of \$7.3 million as income taxes. Prior to the passage of the AJCA, the undistributed earnings of our foreign subsidiaries, with the exception of approximately \$40 million, were considered to be indefinitely reinvested, and in accordance with APB Opinion No. 23 ("APB 23"), Accounting for Income Taxes - Special Areas, no provision for U.S. federal or state income taxes had been provided on these undistributed earnings. The remaining offshore earnings, with the exception of approximately \$40 million, are intended to be indefinitely invested abroad and no provision for U.S. federal or state income taxes has been provided in accordance with APB 23.

Losing the services of our executive officers or our other highly qualified and experienced employees could adversely affect our business.

Our success depends upon the continued contributions of our executive officers and management, many of whom have many years of experience and would be extremely difficult to replace. We must also attract and maintain experienced and highly skilled engineering, sales and marketing and managerial personnel. Competition for qualified personnel is intense in our industries, and we may not be successful in hiring and retaining these people. If we lose the services of our executive officers or cannot attract and retain other qualified personnel, our businesses could be adversely affected.

Public health epidemics (such as flu strains, or severe acute respiratory syndrome) or other natural disasters (such as earthquakes or fires) may disrupt operations in affected regions and affect operating results.

Pulse maintains extensive manufacturing operations in the PRC, Turkey and Tunisia, as do many of our customers and suppliers. A sustained interruption of our manufacturing operations, or those of our customers or suppliers, as a result of complications from severe acute respiratory syndrome or another public health epidemic or other natural disasters, could have a material adverse effect on our business and results of operations.

Costs associated with precious metals may not be recoverable.

AMI Doduco uses silver, as well as other precious metals, in manufacturing some of its electrical contacts, contact materials and contact subassemblies. Historically, we have leased or held these materials through consignment arrangements with our suppliers. Leasing and consignment costs have typically been below the costs to borrow funds to purchase the metals, and more importantly, these arrangements eliminate

the effects of fluctuations in the market price of owned precious metal and enable us to minimize our inventories. AMI Doduco's terms of sale generally allow us to charge customers for precious metal content based on market value of precious metal on the day after shipment to the customer. Thus far we have been

Edgar Filing: TECHNITROL INC - Form 10-Q

successful in managing the costs associated with our precious metals. While limited amounts are purchased for use in production, the majority of our precious metal inventory continues to be leased or held on consignment. If our leasing/consignment fees increase significantly in a short period of time, and we are unable to recover these increased costs through higher sale prices, a negative impact on our results of operations and liquidity may result. Leasing/consignment fee increases are caused by increases in interest rates or volatility in the price of the consigned material.

The unavailability of insurance against certain business risks may adversely affect our future operating results.

As part of our comprehensive risk management program, we purchase insurance coverage against certain business risks. If any of our insurance carriers discontinues an insurance policy or significantly reduces available coverage or increases in the deductibles and we cannot find another insurance carrier to write comparable coverage, we may be subject to uninsured losses which may adversely affect our operating results.

Environmental liability and compliance obligations may affect our operations and results.

Our manufacturing operations are subject to a variety of environmental laws and regulations as well as internal programs and policies governing:

- o air emissions;
- o wastewater discharges;
- o the storage, use, handling, disposal and remediation of hazardous substances, wastes and chemicals; and
- o employee health and safety.

If violations of environmental laws should occur, we could be held liable for damages, penalties, fines and remedial actions. Our operations and results could be adversely affected by any material obligations arising from existing laws, as well as any required material modifications arising from new regulations that may be enacted in the future. We may also be held liable for past disposal of hazardous substances generated by our business or businesses we acquire. In addition, it is possible that we may be held liable for contamination discovered at our present or former facilities.

We are aware of contamination at two locations. In Sinsheim, Germany, there is a shallow groundwater and soil contamination that is naturally decreasing over time. The German environmental authorities have not required corrective action to date. In addition, property in Leesburg, Indiana, which was acquired with our acquisition of GTI in 1998, is the subject of a 1994 Corrective Action Order to GTI by the Indiana Department of Environmental Management (IDEM). Although we sold the property in early 2005, we retained the responsibility for existing environmental issues at the site. The order requires us to investigate and take corrective actions. Substantially all of the corrective actions relating to impacted soil have been taken and IDEM has issued us "no further action" letters for most of the remediated areas. We expect a final "no further action" letter on this area upon IDEM's final review of our closure report. We anticipate making additional environmental expenditures in the future to continue our environmental studies, analysis and remediation activities with respect to this site. Based on current knowledge, we do not believe that any future expenses or liabilities associated with environmental remediation will have a material impact on our operations or our consolidated financial position, liquidity or operating results; however, we may be subject to additional costs and liabilities if the scope of the contamination or the

Edgar Filing: TECHNITROL INC - Form 10-Q

cost of remediation exceeds our current expectations.
