AMARIN CORPORATION ANNOUNCES DRUG RESEARCH AGREEMENT WITH EIFFEL TECHNOLOGIES LTD. TO IMPROVE ORAL DRUG DELIVERY

Research Collaboration to Combine Firms'
Controlled-Release and Supercritical Fluid
Bioengineering Technologies Could Dramatically
Improve Current and Future Pharmaceuticals

LONDON, United Kingdom, May 16, 2002 -- Amarin Corporation plc (NASDAQ: AMRN) today announced that its subsidiary, Amarin Development AB, has entered into an agreement with Eiffel Research and Development Pty Ltd, a subsidiary company of Eiffel Technologies Limited (EIF, ASX) to establish a strategic research partnership. The partnership is designed to improve extended-release pharmaceutical products by combining Amarin's proprietary drug delivery technologies with Eiffel's Supercritical Fluid (SCF) Drug bioengineering technologies.

The initial phase of the collaboration, where each party will be responsible for individual costs, will involve applying Eiffel's SCF technology to the production of sub-micron sized drug particles of a currently undisclosed drug substance. Those drug particles will then be incorporated into Amarin's Diffusion Controlled Vesicle (DCV) controlled-release technology. If successful, the new combination technology would potentially improve the extended-release of drugs that are difficult to deliver orally because of their low solubility in water.

The new combination technology could potentially improve the extended release of drugs that are difficult to deliver orally because of their low absorption into the bloodstream. The new technology could be applied to new compounds or drugs currently on the market but not available in extended-release formulations due to dissolution issues that negatively impact bioavailability. Further details of the agreement were not disclosed.

"Amarin is committed to enhancing the value of our technology platforms through innovative research partnerships and collaborations," said Rick

Stewart, chief executive officer of Amarin Corporation. "This new, combination technology has the potential to both improve the quality of controlled release drugs on the market, as well as broaden the range of drug molecules that can be effectively delivered orally. Most importantly, we believe that this combination could provide significant value to our patients and customers, as well as helping to advance our internal drug development efforts in the key areas of neurology and pain management."

"We look forward to a productive and successful relationship with Amarin," said Christine Cussen, chief executive officer of Eiffel Technologies Limited. "Each partner brings a unique and highly-valued technology to this venture. In combination, these technologies potentially offer significantly enhanced utility in the delivery of pharmaceuticals."

Amarin's DCV system is used for the controlled release of substances for periods up to 24 hours. The patented technology consists of a tablet core incorporating the active ingredient surrounded by a water-insoluble membrane containing minute particles of water-soluble material. The soluble particles dissolve when the tablet is ingested, resulting in a macro-porous film structure through which drug is released at a steady rate. Principal licensees for the technology include Pharmacia, Sanofi-Synthelabo and Tanabe Seiyaku. More than three billion tablets have been manufactured and used effectively by patients in more than thirty countries.

Eiffel's SCF drug bioengineering technologies can be used to improve the physical characteristics of drugs and proteins to enhance their absorption and bioavailability. Under performing, poorly soluble drugs account for over 40 percent of the world pharmaceutical market, currently valued at approximately US\$39 billion in 2000. Eiffel's SCF technologies can be used to improve drug effectiveness, reduce drug cost and dosing, extend patent life of drugs prior to generic competition and provide more patient friendly delivery systems, such as once a day orals, long acting sustained release formulations, and inhalationals to replace injections. Eiffel Research and Development Pty Ltd currently has alliances with, Sheffield Pharmaceuticals Inc and BattellePharma, Inc.

Amarin Corporation plc is a specialty pharmaceutical company focused on neurology and pain management. The company plans to become a leader in these therapeutic categories by providing innovative products and solutions that address significant unmet medical needs. For press releases and other Company information, visit our website at www.amarincorp.com Amarin Development AB, based in Malmo, Sweden, is a wholly owned

subsidiary of Amarin Corporation plc. It is dedicated to the research and development of advanced controlled release and site-specific technology solutions to create improved outcome formulations of both new and existing drugs.

Eiffel Technologies Limited, through its subsidiary company Eiffel Research & Development Pty Ltd, is a biomedical, bioengineering company focused on improving the performance and delivery of pharmaceuticals, proteins and peptides. Based in Melbourne, the company is dedicated to the development and commercialization of SCF drug technologies to improve therapeutic outcomes and patient administration of new and currently marketed pharmaceuticals. For further information on the Company, visit our web site at www.eiffeltechnologies.com.au

Statements in this press release that are not historical facts are forward-looking statements that involve risks and uncertainties which may cause the Company's actual results in future periods to be materially different from any performance suggested herein. Such risks and uncertainties include, without limitation, risks associated with the inherent uncertainty of pharmaceutical research, product development and commercialisation, the impact of competitive products and patents, as well as other risks and uncertainties detailed from time to time in periodic reports. For more information, please refer to Amarin Corporation's Annual Report for 2001 on Form 20-F and its Form 6-Ks as filed with the U.S. Securities and Exchange Commission. The Company assumes no obligation to update information on its expectations.
