Section 8 – Other Events

Item 8.01. Other Events.

Progenics Pharmaceuticals, Inc. (Nasdaq: PGNX) and Wyeth Pharmaceuticals, a division of Wyeth (NYSE: WYE), today announced preliminary findings from the first of two phase 3 clinical trials of intravenous methylnaltrexone being evaluated for the management of postoperative ileus (POI) in patients recovering from segmental colectomy surgical procedures. Preliminary results from the phase 3 clinical trial conducted by Wyeth showed that treatment did not achieve the primary end point of the study: a reduction in time to recovery of gastrointestinal function (i.e., time to first bowel movement) as compared to placebo. The study also did not show that secondary measures of surgical recovery, including time to discharge eligibility, were superior to placebo.

A copy of Progenics' press release is attached hereto as Exhibit 99.1 and the information contained therein is incorporated by reference into this Item 8.01 of this Current Report on Form 8-K.

Item 9.01 Financial Statements and Exhibits.

(d) Exhibits

Exhibit No. Description

99.1 Press Release dated March 12, 2008
