May 10, 2010

UNITED STATES
SECURITIES AND EXCHANGE COMMISSION
Washington, D.C. 20549

Form 10-Q

(Mark One)

QUARTERLY REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE
SECURITIES EXCHANGE ACT OF 1934

For the quarterly period ended March 31, 2010

OR

TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE
SECURITIES EXCHANGE ACT OF 1934

For the transition period from _____ to _____

Commission file number 1-33488

MARSHALL & ILSLEY CORPORATION
(Exact name of registrant as specified in its charter)

Wisconsin
(State or other jurisdiction of
incorporation or organization)

20-8995389
(I.R.S. Employer
Identification No.)

770 North Water Street
Milwaukee, Wisconsin
(Address of principal executive offices)

53202
(Zip Code)

Registrant's telephone number, including area code: (414) 765-7801

None

(Former name, former address and former fiscal year, if changed since last report)

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes No

Indicate by check mark whether the registrant has submitted electronically and posted on its Corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§232.405 of this chapter) during the preceding 12 months (or such shorter period that the registrant was required to submit and post such files).

Yes No

Edgar Filing: MARSHALL & ILSLEY CORP - Form 10-Q

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See the definitions of “large accelerated filer,” “accelerated filer” and “smaller reporting company” in Rule 12b-2 of the Exchange Act.

Large accelerated filer Accelerated filer Non-accelerated filer (Do not check if a smaller reporting company) Small reporting company

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). Yes No

Indicate the number of shares outstanding of each of the issuer's classes of common stock as of the latest practicable date.

Class	Outstanding at April 30, 2010
Common Stock, \$1.00 Par Value	527,244,964

MARSHALL & ILSLEY CORPORATION

Notes to Financial Statements

March 31, 2010 & 2009 (Unaudited)

1. Basis of Presentation

The accompanying unaudited consolidated financial statements should be read in conjunction with Marshall & Ilsley Corporation's Annual Report on Form 10-K for the year ended December 31, 2009. In management's opinion, the unaudited financial information included in this report reflects all adjustments consisting of normal recurring accruals which are necessary for a fair statement of the financial position and results of operations as of and for the three months ended March 31, 2010 and 2009. The results of operations for the three months ended March 31, 2010 and 2009 are not necessarily indicative of results to be expected for the entire year.

2. New Accounting Pronouncements

On January 1, 2010 the Corporation adopted updated accounting guidance to the Transfers and Servicing Topic and the Consolidations Topic to the FASB Accounting Standards Codification. Changes to the Transfers and Servicing Topic eliminate the concept of a qualifying special-purpose entity ("QSPE"), change the requirements for derecognizing financial assets, and require additional disclosures regarding an entity's continuing involvement in and exposure to risks related to transferred financial assets. The changes to the Consolidations Topic replace the quantitative approach previously required for determining which enterprise should consolidate a variable interest entity with a consolidation approach focused on which enterprise has both the power to direct the activities of the entity that most significantly impact the entity's economic performance and the obligation to absorb losses of the entity that could potentially be significant to the entity or the right to receive benefits from the entity that could potentially be significant to the entity. The updated Consolidations Topic also requires ongoing reassessments of whether an enterprise is the primary beneficiary of a variable interest entity, and eliminates an exception indicating that a troubled debt restructuring, as defined by the Debt Topic, is not an event that required reconsideration of whether an entity is a variable interest entity and whether an enterprise is the primary beneficiary of a variable interest entity. The adoption of this updated accounting guidance did not have a material impact on the financial statements and related disclosures.

In January 2010, the FASB updated the disclosure guidance in the Fair Value Measurements and Disclosures Topic. This update clarifies certain existing disclosure requirements and requires separate disclosures of significant transfers in and out of Level 1 and Level 2 of the fair value hierarchy along with descriptions of the reasons for the transfers. In addition, information about purchases, sales, issuances, and settlements should be presented separately for Level 3 disclosures. The updated guidance was effective beginning on January 1, 2010, except for the disclosures about purchases, sales, issuances, and settlements of Level 3 fair value measurements. Those disclosures are effective beginning on January 1, 2011. The impact of the updated disclosure guidance is reflected in Note 3 - Fair Value Measurements.

MARSHALL & ILSLEY CORPORATION

Notes to Financial Statements - Continued

March 31, 2010 & 2009 (Unaudited)

3. Fair Value Measurements

The Fair Value Measurements and Disclosures Topic of the Codification generally apply whenever other topics require or permit assets or liabilities to be measured at fair value. Under the topic, fair value refers to the price at the measurement date that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants in which the reporting entity is engaged. The topic does not expand the use of fair value in any new circumstances.

Fair-Value Hierarchy

The Fair Value Measurements and Disclosures Topic of the Codification establishes a three-tier hierarchy for fair value measurements based upon the transparency of the inputs to the valuation of an asset or liability and expands the disclosures about instruments measured at fair value. A financial instrument is categorized in its entirety and its categorization within the hierarchy is based upon the lowest level of input that is significant to the fair value measurement. The three levels are described below.

Level 1- Inputs to the valuation methodology are quoted prices (unadjusted) for identical assets or liabilities in active markets.

Level 2- Inputs to the valuation methodology include quoted prices for similar assets and liabilities in active markets and inputs that are observable for the asset or liability, either directly or indirectly, for substantially the full term of the financial instrument. Fair values for these instruments are estimated using pricing models, quoted prices of securities with similar characteristics or discounted cash flows.

Level 3- Inputs to the valuation methodology are unobservable and significant to the fair value measurement. Fair values are initially valued based upon transaction price and are adjusted to reflect exit values as evidenced by financing and sale transactions with third parties.

Determination of Fair Value

The following is a description of the valuation methodologies used for instruments measured at fair value on a recurring basis, as well as the general classification of such instruments pursuant to the valuation hierarchy.

Trading Assets and Investment Securities

When available, the Corporation uses quoted market prices to determine the fair value of trading assets and investment securities; such items are classified in Level 1 of the fair value hierarchy.

For the Corporation's investments in government agencies, residential mortgage-backed securities and obligations of states and political subdivisions where quoted prices are not available for identical securities in an active market, the Corporation determines fair value utilizing vendors who apply matrix pricing for similar bonds where no price is observable or may compile prices from various sources. These models are primarily industry-standard models that consider various assumptions, including time value, yield curve, volatility factors, prepayment speeds, default rates, loss severity, current market and contractual prices for the underlying financial instruments, as well as other relevant economic measures. Substantially all of these assumptions are observable in the marketplace, can be derived from observable data or are supported by observable levels at which transactions are executed in the marketplace. Fair

values from these models are verified, where possible, against quoted prices for recent trading activity of assets with similar characteristics to the security being valued. Such methods are generally classified as Level 2. However, when prices from independent sources vary, cannot be obtained or cannot be corroborated, a security is generally classified as Level 3.

Table of Contents

MARSHALL & ILSLEY CORPORATION

Notes to Financial Statements - Continued

March 31, 2010 & 2009 (Unaudited)

The Corporation's Private Equity investments generally take the form of investments in private equity funds. The private equity investments are valued using the valuations and financial statements provided by the general partners on a quarterly basis. The transaction price is used as the best estimate of fair value at inception. When evidence supports a change to the carrying value from the transaction price, adjustments are made to reflect expected exit values. These nonpublic investments are included in Level 3 of the fair value hierarchy because they trade infrequently and, therefore, the fair value is unobservable.

Estimated fair values for residual interests in the form of interest only strips from automobile loan securitizations are based on a discounted cash flow analysis and are classified as a Level 3. There were no automobile loan securitizations outstanding at March 31, 2010.

Derivative Financial Instruments

Fair values for exchange-traded contracts are based on quoted prices and are classified as Level 1. Fair values for over-the-counter interest rate contracts are provided either by third-party dealers in the contracts or by quotes provided by the Corporation's independent pricing services. The significant inputs, including the LIBOR curve and measures of volatility, used by these third-party dealers or independent pricing services to determine fair values are considered Level 2, observable market inputs.

Certain derivative transactions are executed with counterparties who are large financial institutions ("dealers"). These derivative transactions primarily consist of interest rate swaps that are used for fair value hedges, cash flow hedges and economic hedges of interest rate swaps executed with the Corporation's customers. The Corporation and its subsidiaries maintain risk management policies and procedures to monitor and limit exposure to credit risk to derivative transactions with dealers. Approved dealers for these transactions must have and maintain an investment grade rating on long-term senior debt from at least two nationally recognized statistical rating organizations or have a guarantor with an acceptable rating from such organizations. International Swaps and Derivative Association Master Agreements ("ISDA") and Credit Support Annexes ("CSA") are employed for all contracts with dealers. These agreements contain bilateral collateral arrangements. Notwithstanding its policies and procedures, the Corporation recognizes that unforeseen events could result in counterparty failure. The Corporation also recognizes that there could be additional credit exposure due to certain industry conventions established for operational efficiencies.

On a quarterly basis, the Corporation performs an analysis using historical and market implied default and recovery rates that also consider certain industry conventions established for operational efficiencies to estimate the potential impact on the reported fair values of these derivative financial assets and liabilities due to counterparty credit risk and the Corporation's own credit risk. Based on this analysis, the Corporation determined that the impact of these factors was insignificant and did not make any additional credit risk adjustments for purposes of determining the reported fair values of these derivative assets and liabilities with dealers at March 31, 2010.

Certain derivative transactions are executed with customers whose counterparty credit risk is similar in nature to the credit risk associated with the Corporation's lending activities. As is the case with a loan, the Corporation evaluates the credit risk of each of these customers on an individual basis and, where deemed appropriate, collateral is obtained. The type of collateral varies and is often the same collateral as the collateral obtained to secure a customer's loan. For purposes of assessing the potential impact of counterparty credit risk on the fair values of derivative assets with customers, the Corporation used a probability analysis to estimate the amount of expected loss exposure due to customer default at some point in the remaining term of the entire portfolio of customer derivative contracts

outstanding at March 31, 2010. While not significant, the Corporation did factor the estimated amount of expected loss due to customer default in the reported fair value of its customer derivative assets at March 31, 2010.

Notes to Financial Statements - Continued

March 31, 2010 & 2009 (Unaudited)

Assets and liabilities measured at fair value on a recurring basis are categorized in the tables below based upon the lowest level of significant input to the valuations as of March 31, 2010 (\$000's):

	Quoted Prices in Active Markets for Identical Assets or Liabilities (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)
Assets (1)			
Trading Assets:			
Trading securities	\$ -	\$ 21,859	\$ -
Derivative assets	-	232,690	-
Total trading assets	\$ -	\$ 254,549	\$ -
Investment securities available for sale (2)			
U.S. treasury	\$ -	\$ 7,367	\$ -
U.S. government agencies	-	5,801,642	-
States and political subdivisions	-	769,010	40,683
Residential mortgage backed securities	-	203,167	-
Corporate notes	-	-	-
Asset backed securities	-	63,052	88,551
Foreign	-	-	43
Private equity investments	-	-	70,686
Total investment securities available for sale	\$ -	\$ 6,844,238	\$ 199,963
Accrued interest and other assets:			
Financial guarantees - credit protection purchased	\$ -	\$ 8	\$ -
Liabilities (1)			
Short-term borrowings	\$ -	\$ 7,261	\$ -
Accrued expenses and other liabilities:			
Derivative liabilities	\$ -	\$ 203,307	\$ 11,600
Financial guarantees - credit protection sold	-	271	-
Total accrued expenses and other liabilities	\$ -	\$ 203,578	\$ 11,600

(1)

The amounts presented above exclude certain over-the-counter interest rate swaps that are the designated hedging instruments in fair value and cash flow hedges that are used by the Corporation to manage its interest rate risk. These interest rate swaps are measured at fair value on a recurring basis based on significant other observable inputs and are categorized as Level 2. See Note 11 – Derivative Financial Instruments and Hedging Activities in Notes to Financial Statements for further information. Level 3 derivative liabilities represent the fair value of the derivative financial instrument entered into in conjunction with the sale of the Corporation’s shares of Visa, Inc. (“Visa”) Class B common stock. See Note 14 – Guarantees in Notes to Financial Statements for additional information regarding Visa.

- (2) The investment securities included in Level 3 are primarily senior tranche asset-backed securities. The amounts presented are exclusive of \$411,901 of investments in Federal Reserve Bank and FHLB stock, which are bought and sold at par and are carried at cost, and \$64,363 in affordable housing partnerships, which are generally carried on the equity method.

(1) The amounts presented above exclude certain over-the-counter interest rate swaps that are the designated hedging instruments in fair value and cash flow hedges that are used by the Corporation to manage its interest rate risk. These interest rate swaps are measured at fair value on a recurring basis based on significant other observable inputs and are categorized as Level 2. See Note 11 – Derivative Financial Instruments and Hedging Activities in Notes to Financial Statements for further information.

(2)

The investment securities included in Level 3 are primarily senior tranche asset-backed securities. The amounts presented are exclusive of \$362,890 of investments in Federal Reserve Bank and FHLB stock, which are bought and sold at par and are carried at cost, and \$52,099 in affordable housing partnerships, which are generally carried on the equity method.

Level 3 Gains and Losses

The table presented below summarizes the change in balance sheet carrying values associated with financial instruments measured using significant unobservable inputs (Level 3) during the three months ended March 31, 2010 (\$000's):

	Investment Securities (1)	Private Equity Investments (2)	Total	Derivative Liabilities
Balance at December 31, 2009	\$ 271,196	\$ 68,482	\$ 339,678	\$ 11,600
Net payments, purchases and sales	(370)	1,402	1,032	-
Discount accretion	(8)	-	(8)	-
Transfers out of Level 3	(140,483)	-	(140,483)	-
Total gains or losses (realized or unrealized):				
Included in earnings	-	802	802	-
Included in other comprehensive income	(1,058)	-	(1,058)	-
Balance at March 31, 2010	\$ 129,277	\$ 70,686	\$ 199,963	\$ 11,600
Unrealized gains or (losses) for the period included in earnings attributable to unrealized gains or losses for financial instruments still held at March 31, 2010	\$ -	\$ 802	\$ 802	-

- (1) Unrealized changes in fair value for available-for-sale investments (debt securities) are recorded in other comprehensive income, while gains and losses from sales are recorded in Net investment securities gains (losses) in the Consolidated Statements of Income.
- (2) Private equity investments are generally recorded at fair value. Accordingly, both unrealized changes in fair value and gains or losses from sales are included in Net investment securities gains (losses) in the Consolidated Statements of Income.

At March 31, 2010, \$62,140 of highly-rated asset backed securities and \$66,692 of Government National Mortgage Association securities were transferred to Level 2 as significant inputs to the pricing model used to value these securities became observable in the marketplace, could be derived from observable data or the values could be supported by observable levels at which transactions were executed in the marketplace.

Level 3 Gains and Losses

Edgar Filing: MARSHALL & ILSLEY CORP - Form 10-Q

The table presented below summarizes the change in balance sheet carrying values associated with financial instruments measured using significant unobservable inputs (Level 3) during the three months ended March 31, 2009 (\$000's):

	Investment Securities (1)	Private Equity Investments (2)	Other Assets	Total

Notes to Financial Statements - Continued

March 31, 2010 & 2009 (Unaudited)

- (1) Unrealized changes in fair value for available-for-sale investments (debt securities) are recorded in other comprehensive income, while gains and losses from sales are recorded in Net investment securities gains (losses) in the Consolidated Statements of Income.
- (2) Private equity investments are generally recorded at fair value. Accordingly, both unrealized changes in fair value and gains or losses from sales are included in Net investment securities gains (losses) in the Consolidated Statements of Income.

Assets and Liabilities Measured at Fair Value on a Nonrecurring Basis

Loans held for sale are recorded at lower of cost or market and therefore are reported at fair value on a nonrecurring basis. Such fair values are generally based on bids and are considered Level 2 fair values.

Nonaccrual loans greater than \$1.0 million were individually evaluated for impairment. Impairment was measured based on the fair value of the collateral less estimated selling costs or the fair value of the loan ("collateral value method"). All consumer-related renegotiated loans were evaluated for impairment based on the present value of the estimated cash flows discounted at the loan's original effective interest rate ("discounted cash flow method"). A valuation allowance was recorded for the excess of the loan's recorded investment over the amount determined by either the collateral value method or the discounted cash flow method. This valuation allowance is a component of the Allowance for loan and lease losses. The discounted cash flow method is not a fair value measure. For the collateral value method, the Corporation generally obtains appraisals to support the fair value of collateral underlying loans. Appraisals incorporate measures such as recent sales prices for comparable properties and costs of construction. The Corporation considers these fair values Level 3. For those loans individually evaluated for impairment using the collateral value method, the Corporation required a valuation allowance of \$156,562 and \$163,976 for loans with a recorded investment of \$649,365 and \$1,220,396 at March 31, 2010 and March 31, 2009, respectively. See Note 8 – Allowance for Loan and Lease Losses in Notes to Consolidated Financial Statements for more information.

OREO is recorded at fair value based on property appraisals, less estimated selling costs, at the date of transfer. Subsequent to transfer, OREO is carried at the lower of cost or fair value, less estimated selling costs. The carrying value of OREO is not re-measured to fair value on a recurring basis but is subject to fair value adjustments when the carrying value exceeds the fair value, less estimated selling costs. At March 31, 2010 and 2009, the estimated fair value of OREO, less estimated selling costs, amounted to \$454,317 and \$344,271, respectively.

Fair Value of Financial Instruments

Book values and estimated fair values for on and off-balance sheet financial instruments as of March 31, 2010 are presented in the following table. Derivative financial instruments designated as hedging instruments are included in the book values and fair values presented for the related hedged items. Derivative financial instruments designated as trading and other free standing derivatives are included in Trading assets.

Balance Sheet Financial Instruments (\$ in millions)

	March 31, 2010	
	Book Value	Fair Value
Financial assets:		
Cash and short term investments	\$ 2,610.2	\$ 2,610.2
Trading assets	254.5	254.5
Investment securities available for sale	7,520.5	7,520.5
Investment securities held to maturity	104.2	107.3
Net loans and leases	41,133.7	36,511.1
Interest receivable	164.3	164.3
Financial liabilities:		
Deposits	\$ 41,982.3	\$ 42,325.5
Short-term borrowings	894.0	894.0
Long-term borrowings	5,865.4	5,745.8
Derivative liabilities	215.2	215.2
Interest payable	126.8	126.8

Where readily available, quoted market prices are utilized by the Corporation for determining fair value. If quoted market prices are not available, fair values are based on estimates using present value or other valuation techniques. These techniques are significantly affected by the assumptions used, including the discount rate and estimates of future cash flows. The calculated fair value estimates, therefore, cannot be substantiated by comparison to independent markets and, in many cases, could not be realized upon immediate settlement of the instrument. The current reporting requirements exclude certain financial instruments and all nonfinancial assets and liabilities from its disclosure requirements. Accordingly, the aggregate fair value amounts presented do not represent the underlying value of the entire Corporation.

The following methods and assumptions are used in estimating the fair value for financial instruments.

Cash and short-term investments

The carrying amounts reported for cash and short-term investments approximate the fair values for those assets.

Trading assets and investment securities

Fair value is based on market prices where available. The fair value of trading assets and investment securities are categorized as Level 1, Level 2 and Level 3, based on the inputs to the valuations.

Net loans and leases

The fair value of loans and leases was derived from discounted cash flow analyses. Loans and leases as of March 31, 2010 were grouped into 1,587 pools based on similar characteristics such as maturity, payment type and payment frequency, rate type and underlying index, recent loan-to-value (LTV) measures and various types of credit indicators such as recent FICO scores and the Corporation's internal loan rating system. Credit spreads were derived from observable information wherever possible. In cases where observable information was not available because of inactive markets or the change in the loan characteristics such as declining collateral values, certain adjustments were judgmentally made to estimate credit spreads consistent with the manner the Corporation believes market participants would assess the fair value of the loan pool. The Corporation has estimated that increasing or decreasing the credit spreads by the equivalent of a 2 credit rating adjustment could affect the aggregate fair value of the loans and leases by approximately \$0.8 billion or 2.0% of the net carrying value of total loans and leases at March 31, 2010. The fair value of loans held for sale is based on the expected sales price. At March 31, 2010, the fair value of net loans and leases is considered Level 2 and Level 3 in the fair value hierarchy.

Table of Contents

MARSHALL & ILSLEY CORPORATION

Notes to Financial Statements - Continued

March 31, 2010 & 2009 (Unaudited)

Deposits

The fair value for demand deposits or any interest bearing deposits with no fixed maturity date is considered to approximate carrying value. Time deposits with defined maturity dates are considered to have a fair value which approximates the book value if the maturity date was within three months of the measurement date. The remaining time deposits are assigned fair values based on a discounted cash flow analysis using discount rates that approximate interest rates currently being offered on time deposits with comparable maturities. At March 31, 2010, the fair value of deposits is considered Level 2 in the Fair Value Hierarchy.

Borrowings

Short-term borrowings are generally carried at cost that approximates fair value. Long-term debt is valued using discounted cash flow analysis with discount curves developed using several methods. Wherever possible, the Corporation uses pricing from industry accepted services or recently observed transactions in the Corporation's long-term debt to develop the discounting curves. The observed transactions are between unaffiliated parties where there has been sufficient transaction volume to conclude that the observed pricing is representative of the fair value of the long-term debt obligation. In the absence of representative observed transactions, the Corporation develops discount curves based on current incremental borrowing rates for similar types of arrangements. At March 31, 2010, the fair value of borrowings is considered Level 2 in the Fair Value Hierarchy.

Off-Balance Sheet Financial Instruments

Fair values of off-balance sheet financial instruments have been estimated based on the equivalent fees, net of expenses, that would be charged for similar contracts and customers at March 31, 2010 (\$ in millions):

Loan commitments	\$9.7
Commercial letters of credit	0.3
Standby letters of credit	8.6

Table of Contents

MARSHALL & ILSLEY CORPORATION

Notes to Financial Statements - Continued

March 31, 2010 & 2009 (Unaudited)

The table below presents the outstanding options to purchase shares of common stock not included in the computation of diluted earnings per common share because the exercise price was greater than the average market price of the common shares for the three month periods ended March 31, 2010 and 2009 (anti-dilutive options). As a result of the Corporation's reported net loss for the three months ended March 31, 2010 and 2009, all stock options outstanding were excluded from the computation of diluted earnings per common share (shares in thousands):

	Three Months Ended March 31,	
	2010	2009
Shares Subject to Options	33,276	33,162
Price Range	\$4.76 - \$36.82	\$8.55 - \$36.82

An outstanding warrant to purchase 13,815,789 shares of the Corporation's common stock issued in connection with the Corporation's participation in the U.S. Treasury Department's Capital Purchase Program was not included in the computation of diluted earnings per common share for the three months ended March 31, 2010 and 2009, because of the reported net loss in both periods. In addition, the \$18.62 per share exercise price of the warrant was greater than the average market price of the common shares for the three months ended March 31, 2010 and 2009.

The investment securities in the above table were temporarily impaired at March 31, 2010. This temporary impairment represents the amount of loss that would have been realized if the investment securities had been sold on March 31, 2010. The temporary impairment in the investment securities portfolio is the result of market interest rates since the investment securities were acquired and not from deterioration in the creditworthiness of the issuer. At March 31, 2010, the Corporation does not intend to sell these temporarily impaired investment securities until a recovery of recorded investment, which may be at maturity, and it is more likely than not that the Corporation will not have to sell the investment securities prior to recovery of recorded investment.

7. Loans and Leases

Total loans and leases were \$42,648,807, \$44,217,626 and \$49,244,654 at March 31, 2010, December 31, 2009, and March 31, 2009, respectively.

Loans and leases, excluding loans held for sale consisted of the following (\$000's):

	March 31, 2010	December 31, 2009	March 31, 2009
Commercial, financial and agricultural	\$ 11,858,422	\$ 12,473,995	\$ 14,576,302
Real estate:			
Commercial mortgage	13,517,055	13,634,894	12,984,609
Construction and development	5,055,544	5,481,547	8,135,368
Residential mortgage	4,786,886	4,920,765	5,616,988
Home equity loans and lines of credit	4,547,066	4,685,370	5,006,401
Total real estate	27,906,551	28,722,576	31,743,366
Personal	2,131,523	2,191,449	1,889,910
Lease financing	578,208	615,447	729,994
Total loans and leases	\$ 42,474,704	\$ 44,003,467	\$ 48,939,572

Loans are presented net of unearned income and unamortized deferred fees, which amounted to \$100,224, \$111,924 and \$135,261 at March 31, 2010, December 31, 2009 and March 31, 2009, respectively.

Loans held for sale consisted of the following (\$000's):

	March 31, 2010	December 31, 2009	March 31, 2009
Commercial, financial and agricultural	\$ 2,774	\$ 1,633	\$ -
Real estate:			
Commercial mortgage	14,995	11,031	14,317
Construction and development	50,014	57,333	115,983
Residential mortgage	36,947	48,105	94,045
Home equity loans and lines of credit	43,040	29,224	18,691
Total real estate	144,996	145,693	243,036
Personal	26,333	66,833	62,046

Total loans and leases \$ 174,103 \$ 214,159 \$ 305,082

Included in loans held for sale are nonaccrual loans which amounted to \$55,063 and \$113,737 at March 31, 2010 and 2009, respectively. Loans held for sale at December 31, 2009 included nonaccrual loans of \$57,670 and \$15 of troubled debt restructured loans, which the Corporation refers to as renegotiated loans.

For the three months ended March 31, 2010 and 2009, loans transferred to OREO amounted to \$146,852 and \$95,794, respectively. These amounts are considered non-cash transactions for cash flow purposes.

8. Allowance for Loan and Lease Losses

An analysis of the allowance for loan and lease losses follows (\$000's):

	Three Months Ended March	
	2010	2009
Balance at beginning of period	\$ 1,480,470	\$ 1,202,167
Provision for loan and lease losses	458,112	477,924
Charge-offs	(436,459)	(340,223)
Recoveries	13,031	12,249
Balance at end of period	\$ 1,515,154	\$ 1,352,117

As of March 31, 2010, December 31, 2009 and March 31, 2009, nonaccrual loans and leases totaled \$1,953,797, \$2,044,751 and \$2,074,553 and troubled debt restructurings, which the Corporation refers to as renegotiated loans, totaled \$731,839, \$793,459 and \$445,995, respectively.

For purposes of impairment testing, nonaccrual loans greater than one million dollars, renegotiated commercial loans greater than \$250,000 and all consumer related renegotiated loans were individually assessed for impairment. Consumer-related renegotiated loans are evaluated at the present value of expected future cash flows discounted at the loan's effective interest rate. Nonaccrual loans below the threshold were collectively evaluated as homogeneous pools. The required valuation allowance is included in the allowance for loan and lease losses in the Consolidated Balance Sheets.

The Corporation's recorded investment in impaired loans and leases and the related valuation allowance are as follows (\$000's):

	March 31, 2010		March 31, 2009	
	Recorded Investment	Valuation Allowance	Recorded Investment	Valuation Allowance
Total nonaccrual and renegotiated loans and leases	\$ 2,685,636		\$ 2,520,548	
Less: nonaccrual loans held for sale	(55,063)		(113,737)	
Total impaired loans and leases	\$ 2,630,573		\$ 2,406,811	
Loans and leases excluded from individual evaluation	(664,771)		(838,941)	

Impaired loans evaluated	\$ 1,965,802		\$ 1,567,870	
Valuation allowance required	\$ 1,413,884	\$ 359,788	\$ 1,026,947	\$ 222,827
No valuation allowance required	551,918	-	540,923	-
Impaired loans evaluated	\$ 1,965,802	\$ 359,788	\$ 1,567,870	\$ 222,827

The average recorded investment in total impaired loans and leases for the quarters ended March 31, 2010 and 2009 amounted to \$2,758,713 and \$2,271,378 respectively.

The amount of cumulative net charge-offs recorded on the Corporation's impaired loans outstanding at March 31, 2010 was approximately \$829,570.

9. Goodwill and Other Intangibles

The changes in the carrying amount of goodwill for the three months ended March 31, 2010 were as follows (\$000's):

	Commercial Banking	Community Banking	Wealth Management	Others	Total
Gross amount of goodwill	\$ 1,250,595	\$ 609,510	\$ 163,779	\$ 120,777	\$ 2,144,661
Accumulated impairment losses	(925,634)	(609,510)	-	-	(1,535,144)
Goodwill balance as of December 31, 2009	324,961	-	163,779	120,777	609,517
Activity	-	-	-	-	-
Goodwill balance as of March 31, 2010	\$ 324,961	\$ -	\$ 163,779	\$ 120,777	\$ 609,517

The changes in the carrying amount of goodwill for the three months ended March 31, 2009 were as follows (\$000's):

	Commercial Banking	Community Banking	Wealth Management	Others	Total
Gross amount of goodwill	\$ 1,252,880	\$ 609,510	\$ 157,121	\$ 120,777	\$ 2,140,288
Accumulated impairment losses	(925,634)	(609,510)	-	-	(1,535,144)
Goodwill balance as of December 31, 2008	327,246	-	157,121	120,777	605,144
Purchase accounting adjustments	-	-	2,810	-	2,810
Goodwill balance as of March 31, 2009	\$ 327,246	\$ -	\$ 159,931	\$ 120,777	\$ 607,954

Purchase accounting adjustments for Wealth Management represent adjustments made to the initial estimates of fair value associated with the acquisition of Taplin, Canida & Habacht.

At March 31, 2010, the Corporation's other intangible assets consisted of the following (\$000's):

	Gross Carrying Amount	Accumulated Amortization	Net Carrying Amount
Other intangible assets:			
Core deposit intangible	\$ 216,177	\$ (116,966)	\$ 99,211
Trust customers	29,354	(8,014)	21,340
Tradename	3,975	(1,147)	2,828
Other intangibles	7,336	(3,181)	4,155
	\$ 256,842	\$ (129,308)	\$ 127,534
Mortgage loan servicing rights			\$ 1,530

Table of Contents

MARSHALL & ILSLEY CORPORATION

Notes to Financial Statements - Continued

March 31, 2010 & 2009 (Unaudited)

At March 31, 2009, the Corporation's other intangible assets consisted of the following (\$000's):

	Gross Carrying Amount	Accumulated Amortization	Net Carrying Amount
Other intangible assets			
Core deposit intangible	\$ 254,229	\$ (138,336)	\$ 115,893
Trust customers	28,424	(5,015)	23,409
Tradename	3,975	(617)	3,358
Other intangibles	6,787	(1,647)	5,140
	\$ 293,415	\$ (145,615)	\$ 147,800
Mortgage loan servicing rights			\$ 2,354

Amortization expense of other intangible assets for the three months ended March 31, 2010 and 2009 amounted to \$4.9 million and \$5.5 million, respectively.

Amortization of mortgage loan servicing rights amounted to \$0.2 million and \$0.3 million for the three months ended March 31, 2010 and 2009, respectively.

The estimated amortization expense of other intangible assets and mortgage loan servicing rights for the next five fiscal years are (\$000's):

2011	\$19,379
2012	16,785
2013	14,322
2014	12,358
2015	11,078

Mortgage loan servicing rights are subject to the prepayment risk inherent in the underlying loans that are being serviced. The actual remaining life could be significantly different due to actual prepayment experience in future periods.

The Intangibles – Goodwill and Other Topic of the Codification provides guidance for impairment testing of goodwill and intangible assets that are not amortized. Goodwill is tested for impairment using a two-step process that begins with an estimation of the fair value of a reporting unit. The first step is a screen for potential impairment and the

second step measures the amount of impairment, if any.

The Corporation has elected to perform its annual test for goodwill as of June 30th. As a result of performing the annual test in 2009, the Corporation determined that the recorded goodwill was not impaired. There have been no events since the annual test to indicate that it is more likely than not that the recorded goodwill had become impaired. Other than goodwill, the Corporation did not have any other intangible assets with indefinite lives at March 31, 2010.

Total deposits	\$ 41,982,250	\$ 41,637,525	\$ 39,564,364

FDIC's Temporary Liquidity Guarantee Program

On December 5, 2008, the Corporation announced that it and its eligible affiliates would be participating in a component of the FDIC's Temporary Liquidity Guarantee Program – the Transaction Account Guarantee Program (the "TAGP").

Under the TAGP, which has been extended until June 30, 2010, all noninterest-bearing transaction accounts (which the TAGP defines as including all noninterest-bearing personal and business checking accounts, NOW accounts earning no more than 0.5 percent interest, and Interest on Lawyer Trust Accounts) held at M&I's affiliate banks are fully guaranteed by the FDIC for the entire amount in the account. Coverage under the TAGP is in addition to and separate from the coverage available under the FDIC's general deposit rules.

Separately, Congress extended the temporary increase in the standard coverage of FDIC insurance on deposits to a limit of \$250,000 until December 31, 2013.

On April 13, 2010, the Board of Directors of the FDIC approved an interim rule to further extend the TAGP to December 31, 2010. The interim rule gives the FDIC discretion to extend the program to the end of 2011, without additional rulemaking, if it determines that economic conditions warrant such an extension.

Due to the stressed economic conditions that existed in 2008 and 2009, the Corporation believes that its participation in the TAGP was warranted and that such participation had a positive affect on its deposit growth in 2009. The Corporation has determined that its participation in the program and the additional cost of participating in the program is no longer warranted. On April 30, 2010, the Corporation elected to opt out of the TAGP program extension. The impact of the opt-out to the Corporation is uncertain. However, the Corporation anticipates that certain NOW deposits and certain noninterest bearing demand deposits, will likely migrate to other deposit accounts, investment products or

into products offered by other entities.

11. Derivative Financial Instruments and Hedging Activities

The following is an update of the Corporation's use of derivative financial instruments and its hedging activities as described in its Annual Report on Form 10-K for the year ended December 31, 2009. There were no significant new hedging strategies employed during the three months ended March 31, 2010.

Interest rate risk, the exposure of the Corporation's net interest income and net fair value of its assets and liabilities to adverse movements in interest rates, is a significant market risk exposure that can have a material effect on the Corporation's financial condition, results of operations and cash flows. The Corporation has established policies that neither earnings nor fair value at risk should exceed established guidelines and assesses these risks by modeling the impact of changes in interest rates that may adversely impact expected future earnings and fair values.

The Corporation has strategies designed to confine these risks within the established limits and identify appropriate risk / reward trade-offs in the financial structure of its balance sheet. These strategies include the use of derivative financial instruments to help achieve the desired balance sheet repricing structure while meeting the desired objectives of its customers.

The Corporation employs certain over-the-counter interest rate swaps that are the designated hedging instruments in fair value and cash flow hedges that are used by the Corporation to manage its interest rate risk. These interest rate swaps are measured at fair value on a recurring basis based on significant other observable inputs and are categorized as Level 2. See Note 3 – Fair Value Measurements in Notes to Consolidated Financial Statements for additional information.

Trading Instruments and Other Free Standing Derivatives

The Corporation enters into various derivative contracts which are designated as trading and other free standing derivative contracts. These derivative contracts are not linked to specific assets and liabilities on the balance sheet or to forecasted transactions in an accounting hedge relationship and, therefore, do not qualify for hedge accounting under the Derivatives and Hedging Topic of the Codification. They are carried at fair value with changes in fair value recorded as a component of other noninterest income.

Trading and other free standing derivatives are used primarily to focus on providing derivative products to customers which enables them to manage their exposures to interest rate risk. The Corporation's market risk from unfavorable movements in interest rates is generally economically hedged by concurrently entering into offsetting derivative contracts. The offsetting derivative contracts generally have nearly identical notional values, terms and indices. The Corporation used interest rate futures to economically hedge exposure to interest rate risk arising from the interest rate swap (designated as trading) entered into in conjunction with its auto securitization activities. There were no auto securitization activities during the first quarter of 2010.

As permitted under the by-laws of Visa, during the second quarter of 2009 the Corporation sold its 998,826 shares of Visa Class B common stock for \$35.4 million to a qualified purchaser ("purchaser"). At the time of the sale, the conversion ratio of Visa Class B common stock to Visa Class A common stock was 0.6296. That exchange ratio can change based on the outcome of certain litigation matters. Concurrently with the sale, the Corporation and the purchaser entered into a derivative transaction whereby the Corporation will make cash payments to the purchaser

whenever the conversion ratio of Visa Class B common stock to Visa Class A common stock was reset to an amount less than 0.6296. The purchaser will make cash payments to the Corporation when the litigation is settled and the ultimate settlement results in a return of cash or additional shares of Visa common stock to the purchaser. The Corporation determined that the initial fair value of the derivative was equal to the Corporation's Visa U.S.A. membership proportion of the unfunded estimated fair value of the litigation settlement amount. That amount was determined to be a liability of \$14.7 million.

Table of Contents

MARSHALL & ILSLEY CORPORATION

Notes to Financial Statements - Continued

March 31, 2010 & 2009 (Unaudited)

The Corporation's estimate of the fair value of the litigation settlement amount was based in part on the announced settled litigation and based in part on an estimate of the amount required to settle the unresolved matters. Estimating the amount required to settle the unresolved matters involved a significant amount of judgment that can not be verified other than by information disclosed by Visa. As a result, the Corporation has determined that the estimated fair value should be classified in Level 3 of the fair value hierarchy.

On June 30, 2009, Visa announced that it had decided to deposit \$700 million ("Loss Funds") into the litigation escrow account previously established under its retrospective responsibility plan. Despite the funding, Visa did not disclose any updates about the litigation matters that would change the Corporation's estimate of the fair value of the litigation settlement amount. As a result of the deposit, the conversion ratio of Visa Class B common stock to Visa Class A common stock was revised to 0.5824 and the Corporation made a \$3.1 million payment to the counterparty in 2009. There has been no further activity since that payment was made.

The Corporation is both a purchaser and seller of credit protection in the financial guarantees market. The Corporation primarily uses financial guarantees to mitigate credit risk associated with the derivative receivables associated with loan participations (bought and sold).

Financial guarantees are financial instruments whose value is derived from credit risk associated with debt of a third-party issuer (the reference entity) and which allow one party (the protection purchaser) to transfer that risk to another party (the protection seller). Financial guarantees expose the protection purchaser to the creditworthiness of the protection seller, as the protection seller is required to make payments under the contract when the reference entity experiences a credit event, such as a bankruptcy, a failure to pay its obligation or a restructuring. The seller of credit protection receives a premium for providing protection but has the risk that the underlying instrument referenced in the contract will be subject to a credit event.

Upon a credit event, the seller of protection would typically pay out only a percentage of the full notional amount of net protection sold, as the amount actually required to be paid on the contracts takes into account the recovery value of the reference obligation at the time of settlement. The Corporation does not use notional as the primary measure of risk management for credit derivatives because notional does not take into account the probability of occurrence of a credit event, recovery value of the reference obligation, or related cash instruments and economic hedges.

At March 31, 2010, the maximum potential amount of future payments (undiscounted) that the Corporation, as a seller of protection, could be required to make under the credit derivative amounted to \$9.3 million, of which \$2.2 million matures within one year and \$7.1 million matures in one to five years. The fair value of the credit derivative amounted to a negative \$0.3 million at March 31, 2010 and is included in the Accrued Expenses and Other Liabilities category of the Corporation's Consolidated Balance Sheets.

At March 31, 2010, the maximum potential amount of future receivables that the Corporation, as a purchaser of protection, may be eligible to receive under the credit derivative amounted to \$3.6 million, of which \$0.2 million matures within one year, \$1.4 million matures in one to five years and \$2.0 million matures in five to ten years. At March 31, 2010, the fair value of the credit derivative was immaterial.

12. Postretirement Health Plan

The Corporation sponsors a defined benefit health plan that provides health care benefits to eligible current and retired employees. Eligibility for retiree benefits is dependent upon age, years of service, and participation in the health plan during active service. The plan is contributory and in 1997 and 2002 the plan was amended. Employees hired after September 1, 1997, including employees hired following business combinations, will be granted access to the Corporation's plan upon becoming an eligible retiree; however, such retirees must pay 100% of the cost of health care benefits. The plan continues to contain other cost-sharing features such as deductibles and coinsurance.

Net periodic postretirement benefit cost for the three months ended March 31, 2010 and 2009 included the following components (\$000's):

	Three Months Ended March 31,	
	2010	2009
Service cost	\$ 222	\$ 235
Interest cost on APBO	855	980
Expected return on plan assets	(446)	(396)
Prior service amortization	(559)	(560)
Actuarial loss amortization	-	210
Net periodic postretirement benefit cost	\$ 72	\$ 469

Benefit payments and expenses, net of participant contributions, for the three months ended March 31, 2010 amounted to \$1.3 million.

The funded status, which is the accumulated postretirement benefit obligation net of fair value of plan assets, as of March 31, 2010 is as follows (\$000's):

Total funded status, December 31, 2009	\$28,020
Service cost	222
Interest cost on APBO	855
Expected return on plan assets	(446)
Employer contributions/payments	(1,260)
	206

Subsidy (Medicare Part
D)

Total funded status, March 31, 2010	\$27,597
--	----------

On March 23, 2010, the Patient Protection and Affordable Care Act (the “PPACA”) was signed into law, and, on March 30, 2010, the Health Care and Reconciliation Act of 2010 (the “HCERA” and, together with PPACA, the “Acts”), which makes various amendments to certain aspects of the PPACA, was signed into law. The Acts effectively change the income tax treatment of federal subsidies paid to sponsors of retiree health benefit plans that provide prescription drug benefits that are at least actuarially equivalent to the corresponding benefits provided under Medicare Part D. The federal subsidy paid to employers was introduced as part of the Medicare Prescription Drug, Improvement and Modernization Act of 2003 (the “MPDIMA”). The Corporation has been receiving the federal subsidy related to its eligible retiree prescription plan. Under the MPDIMA, the federal subsidy does not reduce the Corporation’s income tax deduction for the costs of providing such prescription drug plans nor is it subject to income tax individually. Under the Acts, beginning in 2013 the Corporation’s income tax deduction for the costs of providing Medicare Part D-equivalent prescription drug benefits to retirees will be reduced by the amount of the subsidy. Under U.S. generally accepted accounting principles, any impact from a change in tax law must be recognized in earnings in the period enacted regardless of the effective date. As a result, the Corporation recognized a noncash charge of \$4.1 million or \$0.01 per diluted share for the write-off of deferred tax assets to reflect the change in tax treatment of the federal subsidy.

13. Business Segments

The Corporation's operating segments are presented based on its management structure and management accounting practices. The structure and practices are specific to the Corporation; therefore, the financial results of the Corporation's business segments are not necessarily comparable with similar information for other financial institutions.

Based on the way the Corporation organizes its segments, the Corporation has determined that it has four reportable segments: Commercial Banking, Community Banking, Wealth Management and Treasury.

Total Revenues by type in Others consist of the following (\$ in millions):

	Three Months Ended March 31,	
	2010	2009
Capital Markets Division	\$ 12.3	\$ 13.0
National Consumer Banking Division	37.6	40.0
Administrative & Other	15.0	13.7
Other	65.4	66.9
Total	\$ 130.3	\$ 133.6

MARSHALL & ILSLEY CORPORATION

Notes to Financial Statements - Continued

March 31, 2010 & 2009 (Unaudited)

14. Guarantees

Letters of Credit

Standby letters of credit are contingent commitments issued by the Corporation to support customer obligations to a third party and to support public and private financing, and other financial or performance obligations of customers. Standby letters of credit have maturities that generally reflect the maturities of the underlying obligations. The credit risk involved in issuing standby letters of credit is the same as that involved in extending loans to customers. If deemed necessary, the Corporation holds various forms of collateral to support standby letters of credit. The gross amount of standby letters of credit issued at March 31, 2010 was \$2.0 billion. Of the amount outstanding at March 31, 2010, standby letters of credit conveyed to others in the form of participations amounted to \$43.2 million. Since many of the standby letters of credit are expected to expire without being drawn upon, the amounts outstanding do not necessarily represent future cash requirements. At March 31, 2010 the estimated fair value associated with letters of credit amounted to \$8.6 million.

Securities Lending

As described in Note 14 – Guarantees, in Notes to Consolidated Financial Statements in Item 8 of the Corporation's 2009 Annual Report on Form 10-K, as part of securities custody activities and at the direction of its clients, the Corporation's Wealth Management segment lends securities owned by its clients to borrowers who have been evaluated for credit risk in a manner similar to that employed in making lending decisions. In connection with these activities, M&I Trust has issued an indemnification against loss resulting from the default by a borrower under the master securities loan agreement due to the failure of the borrower to return loaned securities when due. The borrowing party is required to fully collateralize securities received with cash or marketable securities. As securities are loaned, collateral is maintained at a minimum of 100% of the fair value of the securities plus accrued interest and the collateral is revalued on a daily basis. The amount of securities loaned subject to indemnification was \$6.0 billion at March 31, 2010, \$7.5 billion at December 31, 2009 and \$6.8 billion at March 31, 2009. Because of the requirement to fully collateralize securities borrowed, management believes that exposure to credit loss from this activity is remote and there are no liabilities reflected on the Consolidated Balance Sheets at March 31, 2010, December 31, 2009 and March 31, 2009 related to these indemnifications.

Capital Support Agreement

Certain entities within the Wealth Management segment are the investment advisor and trustee of the M&I Employee Benefit Stable Principal Fund ("SPF"). In prior periods, the SPF periodically participated in securities lending activities. Although not obligated to do so, the Corporation entered into a capital support agreement with the SPF under which the Corporation was required to contribute capital, under certain specific and defined circumstances in an amount not to exceed \$35.0 million should certain asset loss events occur. During the first quarter of 2010, the SPF discontinued its securities lending activities and the capital support agreement was terminated. The net impact of terminating the capital support agreement was not significant. The Corporation does not intend to provide any further explicit or implicit support to the SPF.

Notes to Financial Statements - Continued

March 31, 2010 & 2009 (Unaudited)

15. Other Contingent Liabilities

In the normal course of business, the Corporation and its subsidiaries are routinely defendants in or parties to a number of pending and threatened legal actions, including, but not limited to, actions brought on behalf of various classes of claimants, employment matters, and challenges from tax authorities regarding the amount of taxes due. In certain of these actions and proceedings, claims for monetary damages or adjustments to recorded tax liabilities are asserted. In view of the inherent difficulty of predicting the outcome of such matters, particularly matters that will be decided by a jury and actions that seek large damages based on novel and complex damage and liability legal theories or that involve a large number of parties, the Corporation cannot state with confidence the eventual outcome of these matters or the timing of their ultimate resolution, or estimate the possible loss or range of loss associated with them; however, based on current knowledge and after consultation with legal counsel, management does not believe that judgments or settlements in excess of amounts already reserved, if any, arising from pending or threatened legal actions, employment matters, or challenges from tax authorities, either individually or in the aggregate, would have a material adverse effect on the consolidated financial position or liquidity of the Corporation, although they could have a material effect on operating results for a particular period.

16. Subsequent Events

On April 27, 2010 the Corporation announced that its Board of Directors declared a regular quarterly cash dividend of \$0.01 per share on its common stock. The dividend is payable on June 11, 2010 to common stock shareholders of record as of the close of business on June 1, 2010.

In addition, the Board of Directors declared a regular quarterly cash dividend of \$21.4 million in the aggregate on its Senior Preferred Stock, Series B. The Senior Preferred Stock, Series B was purchased from the Corporation by the U.S. Treasury as part of the U.S. Treasury's Capital Purchase Program. The Preferred Stock dividend is payable on May 17, 2010 to the shareholder of record at the close of business on May 3, 2010.

In April 2010, two substantially identical putative class action lawsuits were filed in the United States District Court for the Eastern District of Wisconsin against the Corporation, the M&I Retirement Plan Investment Committee, and certain of the Corporation's officers and directors. The lawsuits were purportedly filed on behalf of M&I Retirement Program, three other retirement savings plans and a class of former and current participants in those plans, relating to the holdings of Corporation common stock during the period from November 10, 2006 to December 17, 2009. The complaints allege breaches of fiduciary duties in violation of the Employee Retirement Income Security Act (ERISA) relating to Corporation common stock being offered as an investment alternative for participants in the retirement plans and seek monetary damages. At this early stage of the lawsuits, it is not possible for management of the Corporation to assess the probability of a material adverse outcome or reasonably estimate the amount of any potential loss at this time. The Corporation intends to vigorously defend these lawsuits.

OVERVIEW

For the three months ended March 31, 2010, the net loss attributable to the Corporation's common shareholders amounted to \$140.5 million or \$0.27 per diluted common share compared to the net loss attributable to the Corporation's common shareholders of \$116.9 million or \$0.44 per diluted common share for the three months ended March 31, 2009.

The net loss attributable to the Corporation's common shareholders for the three months ended March 31, 2010 and 2009 includes \$25.2 million and \$25.0 million, or \$0.05 and \$0.09 per diluted common share, respectively, for dividends on the Senior Preferred Stock, Series B (the "Senior Preferred Stock") issued to the United States Department of the Treasury (the "UST") in the fourth quarter of 2008 under the UST's Capital Purchase Program (the "CPP").

Financial performance in 2010 compared to 2009 based on diluted earnings per share is affected by the number of common shares used to determine earnings per share. Shares of common stock outstanding at March 31, 2010 increased by 261.4 million or 98.4% compared to common shares outstanding at March 31, 2009. Average common shares used to determine diluted earnings per share were 259.5 million or 98.1% greater in the first quarter of 2010 compared to the first quarter of 2009. The increase in the number of shares of common stock outstanding and average common shares used to determine diluted earnings per share was primarily due to the sales of newly-issued shares of common stock during June and October of 2009.

Credit quality-related charges continued to be the primary driver of the Corporation's financial performance in each of the three months ended March 31, 2010 and 2009. For the three months ended March 31, 2010, the provision for loan and lease losses amounted to \$458.1 million, which on an after-tax basis was approximately \$288.6 million or \$0.55 per diluted common share. By comparison, the provision for loan and lease losses in the fourth quarter of 2009 amounted to \$639.0 million, which on an after-tax basis was approximately \$402.6 million or \$0.84 per diluted common share. For the three months ended March 31, 2009, the provision for loan and lease losses amounted to \$477.9 million, which on an after-tax basis was approximately \$301.1 million or \$1.14 per diluted common share. On a linked-quarter basis, the provision for loan and lease losses in the first quarter of 2010 declined \$180.9 million or 28.3% compared with the fourth quarter of 2009.

Write-downs associated with loans available for sale (other than mortgage loans originated for sale) are reported as a reduction of other income in the Consolidated Statements of Income and amounted to \$7.2 million, which on an after-tax basis, was approximately \$4.6 million or \$0.01 per diluted share in the first quarter of 2010. Write-downs associated with loans available for sale amounted to \$11.1 million, which on an after-tax basis, was approximately \$7.0 million or \$0.01 per diluted share in the fourth quarter of 2009. There were no write-downs associated with loans available for sale in the first quarter of 2009.

Nonaccrual loans and leases at March 31, 2010, which the Corporation refers to as nonperforming loans, amounted to \$1,953.8 million at March 31, 2010, a decrease of \$91.0 million or 4.4% from the reported nonperforming loans of \$2,044.8 million at December 31, 2009, and a decrease of \$120.8 million or 5.8% from the reported nonperforming loans of \$2,074.6 million at March 31, 2009. The reported amount of nonperforming loans at March 31, 2010 represents the third consecutive quarter of a reduction in nonperforming loans since June 30, 2009 when nonperforming loans amounted to \$2,416.1 million, the highest reported amount of nonperforming loans at any quarter-end in 2009 and 2008. Despite these improving trends, the levels of nonperforming loans and the amount of impairment, which affects charge-offs and the allowance for loans and leases, remained elevated, reflecting the current state of the economy, ongoing higher levels of unemployment and the continued depressed state of real estate collateral values resulting from weak real estate markets. The decrease in nonperforming loans at March 31, 2010 reflects the effects of the Corporation's actions taken to reduce the levels of nonperforming loans and the continued

decline in new nonperforming loans which began in the second half of 2009. Compared to the fourth quarter of 2009, the amount of new loans and leases that went into nonperforming status in the first quarter of 2010 decreased by approximately \$268.7 million or 28.5% to the lowest level since the third quarter of 2008. Loans past due 30-89 days, excluding credit card loans, student loans and loans in nonperforming status, declined to the lowest level since December 2007 and declined slightly from December 31, 2009 to March 31, 2010.

Table of Contents

The Corporation continued to employ a variety of strategies to mitigate and reduce its loan loss exposures such as loan sales and restructuring loan terms to lessen the financial stress and the probability of foreclosure for qualifying customers that have demonstrated the capacity and ability to repay their debt obligations in a manner that serves the best interests of both the customer and the Corporation. Troubled debt restructurings, which the Corporation refers to as renegotiated loans, decreased \$61.6 million since December 31, 2009 and amounted to \$731.8 million at March 31, 2010. In addition to normal activity, the decline reflects the net effect of renegotiated loans that were transferred out of renegotiated status on January 1, 2010. Loans transferred out of renegotiated status represent those loans whose payments were current at December 31, 2009 and the original loan was restructured at market interest rates during 2009. At March 31, 2010, renegotiated residential real estate, residential construction by individuals, residential land and other consumer-related renegotiated loans amounted to \$445.2 million or 60.8% of total renegotiated loans.

The allowance for loans and leases amounted to \$1,515.2 million or 3.55% of total loans and leases outstanding at March 31, 2010 compared to \$1,480.5 million or 3.35% at December 31, 2009 and \$1,352.1 million or 2.75% at March 31, 2009. Net charge-offs amounted to \$423.4 million or 3.94% of average loans and leases for the three months ended March 31, 2010 compared to \$572.3 million or 5.01% of average loans and leases for the three months ended December 31, 2009 and \$328.0 million or 2.67% of average loans and leases for the three months ended March 31, 2009. On a linked-quarter basis, net charge-offs in the first quarter of 2010 declined by \$148.9 million or 26.0% compared to the fourth quarter of 2009.

The Corporation continued to experience elevated levels of expenses due to the increase in operating costs associated with collection efforts and carrying nonperforming assets. The estimated expense associated with collection efforts and carrying nonperforming assets, net of related revenue, amounted to \$40.5 million for the first quarter of 2010 compared to \$64.7 million for the fourth quarter of 2009, a decrease of \$24.2 million. That decrease was primarily due to lower losses on sale and lower post-transfer write-downs on other real estate owned (OREO). The estimated expense associated with collection efforts and carrying nonperforming assets, net of related revenue, amounted to \$39.4 million for the first quarter of 2009. On an after-tax basis, that net expense amounted to \$25.5 million or \$0.05 per diluted share in the first quarter of 2010 compared to \$40.8 million or \$0.09 per diluted share in the fourth quarter of 2009 and \$24.8 million or \$0.09 per diluted share in the first quarter of 2009.

As previously discussed, operating expenses for the three months ended March 31, 2010 and the three months ended March 31, 2009 were elevated by the increased costs associated with collection efforts and carrying nonperforming assets as well as other credit-related expenses. Operating expenses for the three months ended March 31, 2010 compared to the three months ended March 31, 2009, also increased due to Federal Deposit Insurance Corporation ("FDIC") insurance premiums for insurance on deposits, which included the cost of participating in a component of the FDIC's Temporary Liquidity Guarantee Program – the Transaction Account Guarantee Program (the "TAGP"). Operating expenses, excluding the expenses associated with collection efforts and carrying nonperforming assets and other credit-related costs and FDIC insurance expense increased approximately 3.3% in the three months ended March 31, 2010 compared to the same period in 2009.

Growth in transaction deposits, a favorable shift in deposit types, lower term funding costs, the partial deployment of excess liquidity and higher loan yields, resulted in higher net interest income in the first quarter of 2010 compared to the first quarter of 2009 despite the absence of loan growth.

Growth in both personal and institutional trust business lines resulted in higher wealth management revenue in the three months ended March 31, 2010 compared to the three months ended March 31, 2009. Lower mortgage loan closings and increased recourse obligation exposure resulted in lower mortgage banking revenue in the three months ended March 31, 2010 compared to the three months ended March 31, 2009. During the first quarter of 2010, the Corporation sold its merchant portfolio processing at a gain.

Net investment securities gains and losses were not significant in the three months ended March 31, 2010 and 2009.

During the first quarter of 2010, health care reform legislation was enacted. Among other matters, this legislation contained provisions that affected the accounting for retiree prescription drug coverage. The Corporation recorded additional income tax expense of \$4.1 million for the write-off of deferred tax assets to reflect the change in the tax treatment of the Medicare Part D federal subsidy as a result of that enacted legislation. As a result of legislation enacted in 2009 that required combined reporting for Wisconsin state income tax purposes, the Corporation recorded an additional income tax benefit of \$51.0 million or \$0.19 per diluted common share to recognize certain state deferred state assets in the first quarter of 2009.

Table of Contents

At March 31, 2010, the Corporation's Tier 1 regulatory capital ratio was 11.1% or \$2,374.4 million in excess of well capitalized under the Federal Reserve Board's regulatory framework. To be well capitalized under the regulatory framework, the Tier 1 capital ratio must meet or exceed 6%.

2010 Outlook

With regard to the outlook for the remainder of 2010, management expects net interest income and the net interest margin will be relatively stable in the near term.

Commercial and industrial loans continued to contract in the first quarter of 2010 compared to the fourth quarter of 2009. The Corporation has observed lower utilization of credit lines and seasonal borrowing from existing customers compared with prior years as commercial customers focus on expense management and debt reduction by delaying capital expenditures and reducing working capital demand. Commercial loan and lease balances are expected to continue to contract until economic improvement takes a stronger hold. Construction and development loans are expected to continue to contract as the Corporation reduces its concentration in these types of loans to its corporate goal of less than 10% of total loans and leases. At March 31, 2010, construction and development loans were slightly less than 12% of total loans and leases outstanding, which is down from the peak at September 30, 2007, when construction and development loans were 22.6% of total loans and leases outstanding. The Corporation continues to experience declines in new commercial real estate development originations and expects this trend to continue. As a result of that reduced demand and normal payment activity, commercial real estate loans are expected to continue to contract slightly. Wealth management revenue will continue to be affected by market volatility and direction.

The decline in nonperforming loans for the third consecutive quarter, continued improvement in delinquencies for the fourth consecutive quarter, reduced levels of loans going into nonperforming status and lower levels of net charge-offs resulted in the lower provision for loan and lease losses this quarter compared to the provisions for loan and lease losses reported in any quarter of 2009. The Corporation's credit quality statistics as of and for the three months ended March 31, 2010 reinforced recent trends with additional positive evidence that the Corporation has experienced credit improvement. Management remains cautiously optimistic that these trends will continue but recognizes that the improving economy remains fragile and unemployment levels continue to be elevated. Management expects it will take a few more quarters to determine if these recent trends are indicative of a longer-term sustainable trend towards normal credit conditions.

Despite those credit trends, the reported amount of the Corporation's nonperforming loans and leases continue to be elevated. As demonstrated in 2008 and 2009, the credit environment and underlying collateral values can change rapidly. As a result, the Corporation continued to increase the allowance for loan and leases in the first quarter of 2010. There are numerous unknown factors at this time that will ultimately affect the timing and amount of nonperforming loans and leases, net charge-offs and the provision for loan and lease losses that will be recognized in the remainder of 2010. The timing and amount of charge-offs will also continue to be influenced by the Corporation's strategies, including sales, for managing its nonperforming loans and leases.

FORWARD-LOOKING STATEMENTS

This report contains statements that may constitute forward-looking statements within the meaning of the safe-harbor provisions for forward-looking statements contained in the Private Securities Litigation Reform Act of 1995, such as statements other than historical facts contained or incorporated by reference in this report. These forward-looking statements include statements with respect to M&I's financial condition, results of operations, plans, objectives, future performance and business, including statements preceded by, followed by or that include the words "believes," "expects,"

or “anticipates,” references to estimates or similar expressions. Future filings by M&I with the Securities and Exchange Commission, and future statements other than historical facts contained in written material, press releases and oral statements issued by, or on behalf of, M&I may also constitute forward-looking statements.

Table of Contents

All forward-looking statements contained in this report or which may be contained in future statements made for or on behalf of M&I are based upon information available at the time the statement is made and M&I assumes no obligation to update any forward-looking statements, except as required by federal securities law. Forward-looking statements are subject to significant risks and uncertainties, and M&I's actual results may differ materially from the expected results discussed in such forward-looking statements. Factors that might cause actual results to differ from the results discussed in forward-looking statements include, but are not limited to, the risk factors in Item 1A, Risk Factors in the Corporation's Annual Report on Form 10-K for the year ended December 31, 2009 and as may be described from time to time in the Corporation's subsequent SEC filings.

OTHER NOTEWORTHY TRANSACTIONS AND EVENTS

Some of the other more noteworthy transactions and events that occurred in the three months ended March 31, 2010 and 2009 consisted of the following:

First Quarter 2010

During the first quarter of 2010, the Corporation sold its merchant portfolio processing. Like other bank holding companies, the Corporation determined that processing, clearing, settlement and related services with respect to credit card and debit card transactions with merchants was not a material source of revenue or part of the Corporation's core operating activities. The gain which is reported as Sale of Merchant Portfolio Processing in the Consolidated Statements of Income amounted to \$48.3 million which on an after-tax basis amounted to \$30.4 million or \$0.06 per diluted share.

On March 23, 2010, the Patient Protection and Affordable Care Act (the "PPACA") was signed into law, and, on March 30, 2010, the Health Care and Reconciliation Act of 2010 (the "HCERA" and, together with PPACA, the "Acts"), which makes various amendments to certain aspects of the PPACA, was signed into law. The Acts effectively change the income tax treatment of federal subsidies paid to sponsors of retiree health benefit plans that provide prescription drug benefits that are at least actuarially equivalent to the corresponding benefits provided under Medicare Part D. The federal subsidy paid to employers was introduced as part of the Medicare Prescription Drug, Improvement and Modernization Act of 2003 (the "MPDIMA"). The Corporation has been receiving the federal subsidy related to its eligible retiree prescription plan. Under the MPDIMA, the federal subsidy does not reduce the Corporation's income tax deduction for the costs of providing such prescription drug plans nor is it subject to income tax individually. Under the Acts, beginning in 2013 the Corporation's income tax deduction for the costs of providing Medicare Part D-equivalent prescription drug benefits to retirees will be reduced by the amount of the subsidy. Under U.S. generally accepted accounting principles, any impact from a change in tax law must be recognized in earnings in the period enacted regardless of the effective date. As a result, the Corporation recognized a noncash charge of \$4.1 million or \$0.01 per diluted share for the write-off of deferred tax assets to reflect the change in tax treatment of the federal subsidy.

First Quarter 2009

The State of Wisconsin enacted legislation that requires combined reporting for state income tax purposes. As a result, the Corporation recorded an additional income tax benefit of \$51.0 million, or \$0.19 per diluted common share to recognize certain state deferred tax assets, which included the reduction of a valuation allowance for Wisconsin net operating losses. The Corporation expects that income tax expense will increase in future periods due to the enacted legislation.

NET INTEREST INCOME

Net interest income is the difference between interest income on earning assets and interest expense on interest bearing liabilities.

Net interest income for the first quarter of 2010 amounted to \$403.5 million compared to \$401.7 million reported for the first quarter of 2009, an increase of \$1.8 million. Growth in transaction deposits, a favorable shift in deposit types, lower term funding costs, the partial deployment of excess liquidity and higher loan yields, resulted in higher net interest income in the first quarter of 2010 compared to the first quarter of 2009 despite the absence of loan growth.

Table of Contents

Average interest earning assets amounted to \$53.0 billion for the first quarter of 2010, a decrease of \$5.7 billion or 9.7% compared to the first quarter of 2009. Average loans and leases decreased \$6.3 billion or 12.6% and average investment securities decreased \$0.2 billion or 3.1% in the first quarter of 2010 compared to the first quarter of 2009. Average short-term investments increased \$1.2 billion in the first quarter of 2010 compared to the first quarter of 2009 which reflects management's decision to maintain higher levels of liquid assets.

Average interest bearing liabilities amounted to \$41.3 billion for the first quarter of 2010, a decrease of \$7.1 billion or 14.7% compared to the first quarter of 2009. Average interest bearing deposits increased \$0.9 billion or 2.7% in the first quarter of 2010 compared to the first quarter of 2009. Average short-term borrowings decreased \$4.7 billion or 82.3% in the first quarter of 2010 compared to the same period in 2009. Average long-term borrowings decreased \$3.3 billion or 34.9% in the first quarter of 2010 compared to the first quarter of 2009. In addition to maturities, the decline in average long-term borrowings reflects the effect of the acquisition and extinguishment of long-term borrowings throughout 2009 and the first quarter of 2010 at a net gain.

Average noninterest bearing deposits increased approximately \$1.3 billion or 20.6% in the three months ended March 31, 2010 compared to the three months ended March 31, 2009.

Loans and Leases

The growth and composition of the Corporation's quarterly average loan and lease portfolio for the current quarter and previous four quarters are reflected in the following table (\$ in millions):

Consolidated Average Loans and Leases

	2010		2009		Growth Percent		
	First Quarter	Fourth Quarter	Third Quarter	Second Quarter	First Quarter	Annual	Prior Quarter
Commercial:							
Commercial	\$ 12,225	\$ 12,721	\$ 13,667	\$ 14,404	\$ 14,745	(17.1)%	(3.9)%
Commercial lease financing	462	481	497	522	547	(15.4)	(3.9)
Total commercial loans and leases	12,687	13,202	14,164	14,926	15,292	(17.0)	(3.9)
Real estate:							
Commercial real							
estate	13,587	13,813	13,844	13,549	12,872	5.6	(1.6)
Residential real							
estate	4,868	5,085	5,263	5,695	5,768	(15.6)	(4.3)
Construction and development:							
Commercial construction	2,392	2,649	2,860	3,290	3,966	(39.7)	(9.7)

Edgar Filing: MARSHALL & ILSLEY CORP - Form 10-Q

Commercial land	859	878	922	898	854	0.6	(2.2)
Construction by developers	398	474	520	693	923	(56.9)	(16.1)
Residential land	1,526	1,705	1,851	2,016	2,094	(27.1)	(10.5)
Construction by individuals	254	358	500	690	834	(69.6)	(29.0)
Total construction and development	5,429	6,064	6,653	7,587	8,671	(37.4)	(10.5)
Total real estate	23,884	24,962	25,760	26,831	27,311	(12.6)	(4.3)
Consumer loans and leases:							
Home equity loans and lines of credit	4,645	4,762	4,844	4,969	5,064	(8.3)	(2.4)
Other personal loans	2,185	2,255	2,200	1,959	1,942	12.6	(3.1)
Personal lease financing	133	150	169	190	207	(35.7)	(11.3)
Total consumer loans and leases	6,963	7,167	7,213	7,118	7,213	(3.4)	(2.8)
Total consolidated average loans and leases	\$ 43,534	\$ 45,331	\$ 47,137	\$ 48,875	\$ 49,816	(12.6)%	(4.0)%
Total consolidated average loans and leases excluding total construction and development	\$ 38,105	\$ 39,267	\$ 40,484	\$ 41,288	\$ 41,145	(7.4)%	(3.0)%

Total consolidated average loans and leases decreased approximately \$6.3 billion or 12.6% in the first quarter of 2010 compared to the first quarter of 2009. Compared to the fourth quarter of 2009, average loans and leases decreased \$1.8 billion or 4.0%.

Table of Contents

Total average commercial loans and leases declined \$2.6 billion or 17.0% in the first quarter of 2010 compared to the first quarter of 2009. Compared to the fourth quarter of 2009, total average commercial loans and leases decreased \$0.5 billion or 3.9%. The Corporation has observed lower utilization of credit lines and seasonal borrowing from existing customers compared with prior years as commercial customers focus on expense management and debt reduction by delaying capital expenditures and reducing working capital demand. Commercial loan and lease balances are expected to continue to contract until economic improvement takes a stronger hold.

Total average commercial real estate loans increased \$0.7 billion or 5.6% in the first quarter of 2010 compared to the first quarter of 2009. The majority of this growth was attributable to the migration of existing construction loans to commercial real estate loans once construction was completed. As a result of the commercial real estate lending environment, the Corporation has provided interim financing for post-construction loans more frequently than it had historically and expects this trend to continue until such time as the liquidity in the commercial real estate lending environment normalizes. Compared to the fourth quarter of 2009, total average commercial real estate loans declined \$0.2 billion or 1.6%. The Corporation continues to experience declines in new commercial real estate development originations and expects this trend to continue. As a result of that reduced demand and normal payment activity, commercial real estate loans are expected to continue to contract slightly. Commercial real estate loans held for sale amounted to \$15.0 million at March 31, 2010.

Total average residential real estate loans declined \$0.9 billion or 15.6% in the first quarter of 2010 compared to the first quarter of 2009. Compared to the fourth quarter of 2009, total average residential real estate loans decreased \$0.2 billion or 4.3%. Throughout 2009 and the first quarter of 2010, the Corporation sold over 90% of its residential real estate production to the secondary market. For the three months ended March 31, 2010 and 2009, real estate loans sold to investors amounted to \$0.4 billion and \$0.7 billion, respectively. At March 31, 2010 and 2009, the Corporation had approximately \$80.0 million and \$112.7 million, respectively, of residential mortgage loans and home equity loans which were originated for sale and were held for sale. Gains from the sale of mortgage loans amounted to \$5.7 million in the first quarter of 2010 compared to \$9.8 million in the first quarter of 2009.

Total average construction and development loans declined \$3.2 billion or 37.4% in the first quarter of 2010 compared to the first quarter of 2009 and declined \$0.6 billion or 10.5% since the fourth quarter of 2009. The decrease in construction and development loans has been due to payments, transfers to other loan types when projects are completed and permanent financing is obtained, loan sales and charge-offs. Construction and development loans held for sale amounted to \$50.0 million at March 31, 2010. Construction and development loans are expected to continue to contract as the Corporation reduces its concentration in these types of loans to its corporate goal of less than 10% of total loans and leases. Construction and development loans amounted to \$5.1 billion at March 31, 2010, which was slightly less than 12% of total loans and leases outstanding at that date and was \$0.3 billion less than average construction and development loans for the three months ended March 31, 2010.

Total average consumer loans and leases declined \$0.2 billion or 3.4% in the first quarter of 2010 compared to the first quarter of 2009. Average home equity loans and lines of credit declined \$0.4 billion or 8.3% in the first quarter of 2010 compared to the first quarter of 2009. Average consumer auto loans increased \$0.5 billion or 71.0% in the first quarter of 2010 compared to the first quarter of 2009 but were relatively unchanged compared to average consumer auto loans in the fourth quarter of 2009. Average auto leases, student loans and other consumer loans decreased \$0.3 billion in the first quarter of 2010 compared to the first quarter of 2009. Credit card loans averaged \$0.3 billion in the first quarter of 2010 and were relatively unchanged compared to average credit card loans in the fourth and first quarters of 2009. Average credit card loans, which represented 0.6% of the Corporation's total average loan and lease portfolio for the three months ended March 31, 2010, were not a significant component of the Corporation's loan and lease portfolio.

Table of Contents

Deposits

The growth and composition of the Corporation's quarterly average deposits for the current and previous four quarters are as follows (\$ in millions):

Consolidated Average Deposits

	2010		2009			Growth Percent	
	First	Fourth	Third	Second	First	Annual	Prior
	Quarter	Quarter	Quarter	Quarter	Quarter		Quarter
Noninterest bearing:							
Commercial	\$ 5,934	\$ 6,152	\$ 5,973	\$ 5,505	\$ 4,849	22.4 %	(3.5)%

Total consolidated average deposits							
	\$ 41,910	\$ 41,571	\$ 41,336	\$ 39,858	\$ 39,667	5.7 %	0.8 %

Total consolidated average deposits increased \$2.2 billion or 5.7% in the first quarter of 2010 compared to the first quarter of 2009 and increased \$0.3 billion or 0.8% compared to the fourth quarter of 2009. Average noninterest bearing deposits increased \$1.3 billion or 20.6% in the first quarter of 2010 compared to the first quarter of 2009 and declined \$0.2 billion or 2.2% compared to the fourth quarter of 2009. Average interest bearing deposits increased approximately \$0.9 billion or 2.7% in the first quarter of 2010 compared to the first quarter of 2009 and increased \$0.5 billion or 1.5% compared to the fourth quarter of 2009. Average total time deposits decreased \$3.2 billion in the first quarter of 2010 compared to the first quarter of 2009 and decreased \$1.4 billion or 8.7% compared to the fourth quarter of 2009. Growth in average money market deposits and savings and NOW accounts more than offset the decline in average total time deposits in the first quarter of 2010 compared to both the fourth and first quarters of 2009. Total average money market deposits increased \$1.3 billion or 12.3% in the first quarter of 2010 compared to the first quarter of 2009 and increased \$1.2 billion or 11.3% compared to the fourth quarter of 2009. Average savings and NOW deposits increased \$3.7 billion or 104.7% in the first quarter of 2010 compared to the first quarter of 2009 and increased \$0.8 billion or 11.7% compared to the fourth quarter of 2009. The growth in average savings and NOW accounts reflects the reconfiguration of many of the Corporation's deposit product offerings with competitive pricing to retain customers and attract new deposits. In addition, existing customers have transferred their balances from other deposit types as those deposit instruments matured. The growth in transaction deposits and shift in the mix of average deposit types was beneficial to net interest income and the net interest margin in the first quarter of 2010.

Table of Contents

Historically, noninterest bearing deposit balances tended to exhibit some seasonality with a trend of balances declining somewhat in the early part of the year followed by growth in balances throughout the remainder of the year. A portion of the noninterest balances, especially commercial balances, is sensitive to the interest rate environment. Larger balances tend to be maintained when overall interest rates are low and smaller balances tend to be maintained as overall interest rates increase. The Corporation has used competitive pricing in the form of higher earnings credits to encourage customers to maintain higher deposit balances and pay less in service charge fees.

On December 5, 2008, the Corporation announced that it and its eligible affiliates would be participating in a component of the FDIC's Temporary Liquidity Guarantee Program – the TAGP. Under the TAGP, which had been initially extended until June 30, 2010, all noninterest-bearing transaction accounts (which the TAGP defines as including all noninterest-bearing personal and business checking accounts, NOW accounts earning no more than 0.5 percent interest, and Interest on Lawyer Trust Accounts) held at M&I's affiliate banks, are fully guaranteed by the FDIC for the entire amount in the account. Coverage under the TAGP is in addition to and separate from the coverage available under the FDIC's general deposit rules. Separately, Congress extended the temporary increase in the standard coverage of FDIC insurance on deposits to a limit of \$250,000 until December 31, 2013.

On April 13, 2010, the Board of Directors of the FDIC approved an interim rule to further extend the TAGP to December 31, 2010. The interim rule gives the FDIC discretion to extend the program to the end of 2011, without additional rulemaking, if it determines that economic conditions warrant such an extension.

Due to the stressed economic conditions that existed in 2008 and 2009, the Corporation believes that its participation in the TAGP was warranted and that such participation had a positive affect on its deposit growth in 2009. The Corporation has determined that its participation in the program and the additional cost of participating in the program is no longer warranted. On April 30, 2010, the Corporation elected to opt out of the TAGP program extension. The impact of the opt-out to the Corporation is uncertain. However, the Corporation anticipates that certain NOW deposits and certain noninterest bearing deposits, will likely migrate to other deposit accounts, investment products or into products offered by other entities. The Corporation considers its liquidity position to be sufficiently adequate to manage through the effect of its election to opt-out of the TAGP program extension.

Total borrowings amounted to \$6.8 billion at March 31, 2010 compared to \$7.5 billion at December 31, 2009. During the first three months of 2010, the Corporation re-acquired and extinguished \$100.9 million of long-term borrowings at a gain of \$10.3 million, which is reported as gain on termination of debt in the Consolidated Statements of Income.

Table of Contents

Average Balance Sheets and Analysis of Net Interest Income

The Corporation's consolidated average interest earning assets and interest bearing liabilities, interest earned and interest paid for the three months ended March 31, 2010 and 2009 are presented in the following table (\$ in millions):

Consolidated Yield and Cost Analysis

	Three Months Ended March 31, 2010			Three Months Ended March 31, 2009		
	Average Balance	Interest	Average Yield or Cost (b)	Average Balance	Interest	Average Yield or Cost (b)
Loans and leases (a):						
Commercial loans and leases	\$ 12,686.9	\$ 141.7	4.53 %	\$ 15,292.2	\$ 147.2	3.90 %
Commercial real estate loans	13,586.7	168.3	5.02	12,871.8	166.8	5.26
Residential real estate loans	4,867.7	61.8	5.15	5,768.2	79.4	5.58
Construction and development	5,428.6	50.0	3.74	8,671.1	79.4	3.72
Home equity loans and lines	4,645.3	57.1	4.98	5,064.1	64.8	5.19
Personal loans and leases	2,318.3	31.4	5.50	2,148.3	29.3	5.54
Total loans and leases	43,533.5	510.3	4.75	49,815.7	566.9	4.62
Investment securities:						
Taxable	6,551.2	49.4	3.05	6,607.4	63.1	3.83
Tax exempt (a)	902.8	14.3	6.52	1,081.7	18.3	6.94
Total investment securities	7,454.0	63.7	3.47	7,689.1	81.4	4.26
Trading assets (a)	253.0	0.2	0.33	585.0	1.9	1.33
Short-term investments	1,721.2	1.1	0.26	570.3	0.7	0.45
Total interest earning assets	\$ 52,961.7	\$ 575.3	4.41 %	\$ 58,660.1	\$ 650.9	4.50 %

Interest bearing deposits:						
Savings and NOW	\$ 7,227.2	\$ 8.3	0.47 %	\$ 3,530.1	\$ 1.1	0.13 %
Money market	11,936.3	23.6	0.80	10,631.2	16.4	0.62
Time	14,680.0	80.4	2.22	17,901.5	119.7	2.71
Foreign	247.7	0.2	0.41	1,122.7	0.9	0.33
Total interest bearing deposits	34,091.2	112.5	1.34	33,185.5	138.1	1.69
Short-term borrowings	1,014.9	0.7	0.27	5,724.1	4.0	0.28
Long-term borrowings	6,231.9	52.9	3.44	9,570.7	99.9	4.24
Total interest bearing liabilities	\$ 41,338.0	\$ 166.1	1.63 %	\$ 48,480.3	\$ 242.0	2.02 %
Net interest margin (FTE)		\$ 409.2	3.13 %		\$ 408.9	2.82 %
Net interest spread (FTE)			2.78 %			2.48 %

- (a) Fully taxable equivalent (“FTE”) basis, assuming a Federal income tax rate of 35%, and excluding disallowed interest expense.
- (b) Based on average balances excluding fair value adjustments for available for sale securities.

The net interest margin FTE amounted to 3.13% in the first quarter of 2010 compared to 2.82% in the first quarter of 2009 an increase of 31 basis points. Growth in transaction deposits particularly noninterest bearing deposits, a favorable shift in deposit types, lower term funding costs due in part to the reduction in higher cost long-term borrowings through re-acquisition and maturities, lower nonperforming loans and the partial deployment of excess liquidity, resulted in higher net interest income in the first quarter of 2010 compared to the first quarter of 2009. The yield on earning assets declined by 9 basis points and the cost for interest bearing liabilities declined by 39 basis points for the three months ended March 31, 2010 compared to the three months ended March 31, 2009. Net interest income in the first quarter of 2010 continued to be compressed as a result of the elevated levels of nonperforming loans and leases, interest rate concessions associated with renegotiated loans and management’s decision to maintain higher levels of liquid assets. The net interest margin FTE in the first quarter of 2010 increased by 18 basis points compared to the reported net interest margin FTE of 2.95% for the fourth quarter of 2009.

Table of Contents

Management expects net interest income and the net interest margin will remain relatively stable in the near term. Net interest income and the net interest margin percentage can vary and continue to be influenced by loan and deposit growth, product spreads, pricing competition in the Corporation's markets, prepayment activity, future interest rate changes, levels of nonperforming loans and various other factors.

Table of Contents

SUMMARY OF LOAN AND LEASE LOSS EXPERIENCE AND CREDIT QUALITY

The following tables present comparative consolidated credit quality information as of March 31, 2010 and the prior four quarters:

Consolidated Credit Quality Information										
(\$000's)										
	2010		2009							
	First	Fourth	Third	Second	First					
	Quarter	Quarter	Quarter	Quarter	Quarter					
Nonperforming assets :

and leases					
Total nonperforming loans and leases to total loans and leases	4.58	4.62	4.88	5.01	4.21
Total nonperforming assets to total loans and leases and OREO	5.59	5.54	5.60	5.71	4.88
Allowance for loan and lease losses to total loans and leases	3.55	3.35	3.07	2.84	2.75
Allowance for loan and lease losses to nonaccrual loans and leases (excluding nonaccrual loans held for sale)	80	75	67	62	69

The Corporation's credit quality statistics as of and for the three months ended March 31, 2010 reinforced recent trends with additional positive evidence that the Corporation has experienced credit improvement. Those trends include the following:

Nonaccrual loans and leases, which the Corporation refers to as nonperforming loans and leases, are considered to be those loans and leases with the greatest risk of loss. Nonperforming loans and leases reached their highest reported quarter-end balance of \$2,416.1 million or 5.01% of consolidated loans and leases at June 30, 2009, which was the tenth consecutive quarter of an increase in nonperforming loans and leases since December 31, 2006. Since June 30, 2009, nonperforming loans and leases declined \$166.0 million or 6.9% in the third quarter of 2009, declined \$205.3 million or 9.1% in the fourth quarter of 2009 and declined \$91.0 million or 4.4% in the first quarter of 2010 and amounted to \$1,953.8 million or 4.58% of consolidated loans and leases at March 31, 2010.

The balances of new loans and leases transferred to nonperforming status during the first quarter of 2010 were at their lowest level since the third quarter of 2008. The balances of new loans and leases transferred to nonperforming status during the second half of 2009 were approximately \$636.8 million or 26.3% less than the balances of new loans and leases transferred to nonperforming status during the first half of the year. The balances of new loans and leases transferred to nonperforming status during the first quarter of 2010 were approximately \$268.7 million or 28.5% less than the balances of new loans and leases transferred to nonperforming status during the fourth quarter of 2009.

At March 31, 2009, loans and leases past due 30-89 days, excluding credit card loans, student loans and loans and leases in nonperforming status, amounted to \$1,477.0 million. Since March 31, 2009, loans and leases past due 30-89 days declined \$586.7 million in the second quarter of 2009, declined \$224.2 million in the third quarter of 2009,

declined \$127.0 million in the fourth quarter of 2009 and declined \$5.5 million in the first quarter of 2010.

Table of Contents

The Corporation continues to work aggressively to isolate, identify and assess its underlying loan and lease portfolio credit quality and has developed and continues to develop strategies to reduce and mitigate its loss exposure. During the first quarter of 2010, the Corporation sold \$56 million of nonperforming and potential problem loans. At March 31, 2010, the Corporation held \$55.1 million of nonperforming loans and \$12.9 million of potential problem loans that are intended to be sold and have been charged down to their net realizable value.

Generally, loans that are 90 days or more past due as to interest or principal are placed on nonaccrual. Exceptions to these rules are generally only for loans fully collateralized by readily marketable securities or other relatively risk free collateral and certain personal loans. In addition, a loan may be placed on nonaccrual when management makes a determination that the facts and circumstances warrant such classification irrespective of the current payment status. At March 31, 2010, approximately \$534.5 million or 27.4% of the Corporation's total nonperforming loans and leases were less than 30 days past due. In addition, approximately \$170.8 million or 8.7% of the Corporation's total nonperforming loans and leases were greater than 30 days past due but less than 90 days past due at March 31, 2010. In total, approximately \$705.3 million or 36.1% of the Corporation's total nonperforming loans and leases were less than 90 days past due at March 31, 2010.

The following table shows the Corporation's nonperforming loans and leases by type of loan or lease at March 31, 2010 and December 31, 2009.

Major Categories of Nonperforming Loans & Leases
(\$ in millions)

	March 31, 2010				December 31, 2009			
	Loans & Leases	Percent of Total Loans & Leases	Nonperforming Loans & Leases	% Nonperforming to Loan & Lease Type	Loans & Leases	Percent of Total Loans & Leases	Nonperforming Loans & Leases	% Nonperforming to Loan & Lease Type

Consumer loans & leases:								
Home equity loans and lines of credit	4,590	10.8	80.0	1.74	4,715	10.7	84.9	1.80
Other consumer loans and leases	2,282	5.3	12.9	0.57	2,399	5.4	11.0	0.46
Total consumer loans & leases	6,872	16.1	92.9	1.35	7,114	16.1	95.9	1.35
Total loans & leases	\$42,649	100.0%	\$1,953.8	4.58 %	\$44,218	100.0%	\$2,044.8	4.62 %

Nonperforming commercial loans and leases amounted to \$252.7 million at March 31, 2010 compared to \$350.5 million at December 31, 2009, a net decrease of \$97.8 million. Approximately \$50.0 million of the decline was due to a loan to a bank holding company that was charged-off during the first quarter of 2010. At December 31, 2009, that loan was the Corporation's largest single nonperforming loan outstanding and had been fully reserved since being placed in nonperforming status earlier in 2009.

Consistent with recent quarters, nonperforming real estate loans were the primary source of the Corporation's nonperforming loans and leases and represented approximately 82.3% of total nonperforming loans and leases at March 31, 2010. Nonperforming real estate loans amounted to \$1,608.2 million at March 31, 2010 compared to \$1,598.4 million at December 31, 2009, an increase of \$9.8 million or 0.6%. Nonperforming real estate loans consisted of the following categories:

Table of Contents

Nonperforming commercial real estate loans amounted to \$657.1 million at March 31, 2010 compared to \$584.9 million at December 31, 2009, an increase of \$72.2 million or 12.3%. Included in this category of nonperforming commercial real estate loans are nonperforming business real estate and multifamily loans. Nonperforming business real estate loans increased \$77.1 million or 18.8% and nonperforming multifamily loans decreased \$5.8 million or 3.6% at March 31, 2010 compared to December 31, 2009. At March 31, 2010, approximately 43.4% of nonperforming business real estate loans or 32.2% of total nonperforming commercial real estate loans related to one credit relationship that consists of multiple commercial real estate loans for geographically dispersed commercial real estate investments related to the lodging industry that was placed in nonperforming status in 2009.

Nonperforming residential real estate (1-4 family) loans increased \$63.5 million or 30.8% compared to December 31, 2009 and amounted to \$269.6 million or 5.59% of total residential real estate loans at March 31, 2010. Elevated levels of unemployment have continued to be a source of economic stress and have resulted in further deterioration in these loans across all of the Corporation's markets and most notably in Arizona. Nonperforming residential real estate loans in Arizona were 62.3% of total nonperforming residential real estate loans at March 31, 2010 and accounted for 73.8% of the increase in nonperforming residential real estate loans from December 31, 2009 to March 31, 2010.

Since March 31, 2009, nonperforming construction and development loans declined \$27.1 million in the second quarter of 2009, declined \$58.9 million in the third quarter of 2009, declined \$177.1 million in the fourth quarter of 2009 and declined \$125.9 million or 15.6% in the first quarter of 2010 and amounted to \$681.5 million at March 31, 2010. The decrease in nonperforming construction and development loans was primarily due to reduced levels of new nonperforming loans, loan sales and charge-offs. The reduced levels of new nonperforming construction and development loans reflect the decline in volume of new larger construction loans transferring to nonperforming status, especially in Florida and Arizona. Nonperforming construction and development loans represented 42.4% of the Corporation's nonperforming real estate loans and 34.9% of the Corporation's total nonperforming loans and leases at March 31, 2010. Nonperforming construction and development loans in Florida and Arizona accounted for \$289.6 million or 42.5% of total nonperforming construction and development loans at March 31, 2010.

Nonperforming consumer loans and leases amounted to \$92.9 million at March 31, 2010 compared to \$95.9 million at December 31, 2009, a decrease of \$3.0 million or 3.0%. Nonperforming consumer loans and leases as a percent of total consumer loans and leases was 1.35% at both March 31, 2010 and December 31, 2009 and remained relatively stable despite the elevated levels of unemployment that have continued to be a source of economic stress for consumers.

The following table presents a geographical summary of nonperforming loans and leases at March 31, 2010 and December 31, 2009.

Geographical Summary of Nonperforming Loans & Leases
(\$ in millions)

	March 31, 2010			December 31, 2009

Total	\$ 42,649	100.0%	\$ 1,953.8	4.58 %	\$ 44,218	100.0%	\$ 2,044.8	4.62 %

At March 31, 2010, nonperforming loans in Arizona amounted to \$407.2 million compared to \$431.4 million at December 31, 2009, a decrease of \$24.2 million or 5.6%. Despite the decrease, nonperforming loans in Arizona represented 20.8% of total consolidated nonperforming loans and leases at March 31, 2010 and continue to be the largest concentration of nonperforming loans in the Corporation's loan and lease portfolio. Nonperforming residential real estate loans increased \$46.9 million or 38.8% during the first quarter of 2010 and amounted to \$168.0 million or 41.2% of nonperforming loans in Arizona at March 31, 2010. Nonperforming construction and development loans decreased \$61.4 million or 26.1% during the first quarter of 2010 and amounted to \$174.0 million or 42.7% of nonperforming loans in Arizona at March 31, 2010.

Table of Contents

At March 31, 2010, nonperforming loans in Wisconsin amounted to \$328.4 million compared to \$401.7 million at December 31, 2009, a decrease of \$73.3 million or 18.2%. As previously discussed, approximately \$50.0 million of the decline was due to a loan to a bank holding company that was charged-off during the first quarter of 2010. Nonperforming construction and development loans in Wisconsin decreased \$21.3 million or 18.5% during the first quarter of 2010.

Nonperforming loans in Florida amounted to \$276.9 million at March 31, 2010 compared to \$307.5 million at December 31, 2009, a decrease of \$30.6 million or 10.0%. Nonperforming commercial real estate loans in Florida increased \$19.5 million or 21.2% during the first quarter of 2010 and amounted to \$111.4 million or 40.2% of nonperforming loans in Florida at March 31, 2010. Nonperforming construction and development loans decreased \$55.2 million or 32.3% during the first quarter of 2010 and amounted to \$115.7 million or 41.8% of nonperforming loans in Florida at March 31, 2010.

Nonperforming loans outside of the Corporation's primary markets were relatively stable at March 31, 2010, increasing \$7.6 million or 1.5% since December 31, 2009. At March 31, 2010, approximately 40.6% of nonperforming loans outside of the Corporation's primary markets related to one credit relationship that consists of multiple commercial real estate loans for geographically dispersed commercial real estate investments related to the lodging industry that was placed in nonperforming status in 2009.

Other Real Estate Owned (OREO)

OREO is principally comprised of commercial and residential properties acquired in partial or total satisfaction of problem loans. Activity relating to OREO for the three months ended March 31, 2010 and 2009 consisted of the following:

	Three Months Ended March 31, (\$ in millions)	
	2010	2009
Other Real Estate Owned (OREO):		
Beginning Balance	\$ 430.8	\$ 320.9
Additions, net of initial write-downs	149.1	95.8
Dispositions	(105.9)	(52.7)
Capitalized costs	0.7	1.1
Valuation adjustments	(20.4)	(20.8)
Ending Balance	\$ 454.3	\$ 344.3

Write-downs at initial transfer from loans to OREO are recorded as charge-offs. Valuation adjustments after the initial transfer, which are included in OREO expenses in the Consolidated Statements of Income, reflect the continued decline in real estate values due to the economy and elevated levels of unemployment and other real estate market conditions at the measurement date.

Valuation adjustments reported in OREO expenses were relatively stable in the first half of 2009. Valuation adjustments reported in OREO expenses were \$20.8 million and \$20.0 million in the first and second quarters of 2009, respectively. Valuation adjustments reported in OREO expenses increased \$15.5 million and amounted to \$35.5 million in the third quarter of 2009 and decreased \$2.7 million and amounted to \$32.8 million in the fourth quarter of 2009. Compared to the fourth quarter of 2009, valuation adjustments reported in OREO expenses decreased \$12.4 million or 37.8% in the first quarter of 2010.

At March 31, 2010, properties acquired in partial or total satisfaction of problem loans, based on loan type, consisted of construction and development of \$345.6 million, 1-4 family residential real estate of \$44.4 million and commercial real estate of \$64.3 million. At March 31, 2009, properties acquired in partial or total satisfaction of problem loans, based on loan type, consisted of construction and development of \$258.3 million, 1-4 family residential real estate of \$72.5 million and commercial real estate of \$13.5 million. OREO in Arizona represented approximately 35.4% and 52.4% of total OREO at March 31, 2010 and 2009, respectively. As a result of the soft real estate market and the increased possibility of foreclosures due to the elevated levels of nonperforming loans, management expects that OREO will remain at elevated levels in future quarters.

Table of Contents

Troubled Debt Restructuring (Renegotiated Loans)

The Corporation recognizes that the current economy, elevated levels of unemployment and depressed real estate values have resulted in many customers being far more leveraged than prudent and in a very difficult financial position. Potentially distressed homeowners are identified in advance, and proactively offered assistance. In order to avoid foreclosure in the future, the Corporation has restructured loan terms for certain qualified borrowers that have demonstrated the ability to make the restructured payments for a specified period of time. The Corporation's foreclosure abatement program includes several options to reduce contractual payments. The Corporation has primarily used reduced interest rates and extended terms to lower contractual payments. In addition, the Corporation has implemented a 90-day foreclosure moratorium on all owner-occupied residential loans for customers who agree to work in good faith to reach a successful repayment agreement. The moratorium applies to loans in all the Corporation's markets and was extended a number of times in 2009 and 2010. The most recent moratorium is scheduled to expire on June 30, 2010. Similarly, the Corporation also has restructured loan terms for certain qualified commercial borrowers that have demonstrated the ability to make the restructured payments to avoid foreclosure in the future.

Troubled-debt restructured loans, which the Corporation refers to as renegotiated loans, amounted to \$731.8 million at March 31, 2010 compared to \$793.5 million at December 31, 2009, a net decrease of \$61.7 million or 7.8%. In addition to normal activity, that decline reflects the effect of renegotiated loans that were transferred out of renegotiated status. Loans transferred out of renegotiated status represent the annual transfer of those loans whose payments were current at December 31, 2009 and the loan was restructured at market interest rates during 2009.

During the first quarter of 2010, there was an increase in renegotiated loans to commercial borrowers. Loans to commercial borrowers with balances of \$2.0 million dollars or more that were transferred to renegotiated status during the first quarter of 2010 amounted to \$143.4 million. That increase consisted of commercial loans of \$19.0 million, commercial real estate loans of \$24.0 million and commercial construction and development loans of \$100.4 million. These new renegotiated loans to commercial borrowers were geographically dispersed.

At March 31, 2010, consumer-related renegotiated loans (residential real estate, residential land, construction by individuals, home equity loans and lines of credit and other consumer loans) represented 60.8% of total renegotiated loans compared to 82.1% at December 31, 2009. That shift was due to the previously discussed reduction of loans associated with the annual transfer of renegotiated loans that were primarily consumer-related and the increase in renegotiated loans to commercial borrowers.

Table of Contents

The following table shows the Corporation's renegotiated loans by type of loan at March 31, 2010 and December 31, 2009.

Major Categories of Renegotiated Loans (\$ in millions)					
	March 31, 2010		December 31, 2009		
	Renegotiated Loans	Percent of Total Renegotiated Loans	Renegotiated Loans	Percent of Total Renegotiated Loans	Renegotiated Loans
Commercial	\$ 64.3	8.8 %	\$ 46.3	5.8 %

Total real estate	623.3	85.1	635.8	80.1	
Consumer					
Home equity loans and lines of credit	39.9	5.5	106.5	13.5	
Other consumer	4.3	0.6	4.9	0.6	
Total consumer	44.2	6.1	111.4	14.1	
Total renegotiated loans	\$ 731.8	100.0 %	\$ 793.5	100.0 %	

The following table shows the geographical summary of the Corporation's renegotiated loans at March 31, 2010 and December 31, 2009.

Geographical Summary of Renegotiated Loans
(\$ in millions)

	March 31, 2010		December 31, 2009	
	Renegotiated Loans	Percent of Total Renegotiated Loans	Renegotiated Loans	Percent of Total Renegotiated Loans
Wisconsin	\$ 40.5	5.5 %	\$ 54.2	6.8 %
Arizona	368.2	50.3	454.8	57.3
Minnesota	30.6	4.2	30.5	3.8
Missouri	10.0	1.4	12.2	1.5
Florida	17.4	2.4	25.5	3.2
Indiana	2.7	0.4	7.5	0.9
Kansas	1.0	0.1	2.1	0.3
Others	261.4	35.7	206.7	26.2
Total	\$ 731.8	100.0 %	\$ 793.5	100.0 %

Approximately \$368.2 million or 50.3% of the Corporation's total renegotiated loans at March 31, 2010 were loans located in Arizona. Consumer-related renegotiated loans (residential real estate, residential land, construction by individuals, home equity loans and lines of credit and other consumer loans) represented 93.8% of total renegotiated loans in Arizona. Renegotiated construction and development loans in Arizona amounted to \$113.7 million or 50.9% of total renegotiated construction and development loans at March 31, 2010.

Table of Contents

Renegotiated loans located outside of the Corporation's primary markets amounted to \$261.4 million compared to \$206.7 million at December 31, 2009, an increase of \$54.7 million or 26.5%. That increase was primarily due to an increase in renegotiated commercial construction and development loans that were geographically dispersed. At March 31, 2010 and December 31, 2009, approximately \$38.6 million and \$40.1 million respectively, of the reported amounts relates to a single commercial loan. At March 31, 2010 and December 31, 2009, approximately \$83.6 million and \$84.0 million, respectively, of the reported amounts related to a large lending relationship consisting of individual loans for a number of geographically dispersed commercial real estate projects. These loans continue to perform as expected.

After restructuring, renegotiated loans result in lower payments than originally required and therefore have a lower expected risk of loss due to nonperformance than loans classified as nonperforming. For those consumer-related renegotiated loans that were restructured between June 2008 and December 2009, the cumulative default and re-default rate as of March 31, 2010 was approximately 27.2%. The Corporation employs formal processes to determine a reasonable repayment program for qualified borrowers and has a policy that requires such borrowers to demonstrate the ability to make the restructured payments for a specified period of time before the loan is transferred to renegotiated status. The Corporation's experience with renegotiated loan performance does not encompass an extended period of time. Irrespective of the Corporation's procedures and policies, payment performance will continue to be adversely affected by unexpected increases in unemployment or other unanticipated events that affect the borrowers' ability to make payments. At March 31, 2010, approximately \$41.0 million or 5.6% of total renegotiated loans were past due 30-89 days. At December 31, 2009, approximately \$61.6 million or 7.8% of total renegotiated loans were past due 30-89 days. The Corporation expects nonaccrual loans will initially increase until the loan terms are restructured. Upon restructuring, nonaccrual loans will decline and the balance of renegotiated loans will increase. The Corporation expects the balance of renegotiated loans will continue to increase in future quarters.

Loans 90 days past due and still accruing interest amounted to \$9.3 million at March 31, 2010 compared to \$8.8 million at December 31, 2009 and \$16.1 million at March 31, 2009.

Delinquency can be an indicator of potential problem loans and leases. At March 31, 2010, loans and leases past due 30-89 days, excluding credit card loans, student loans and loans in nonperforming status, amounted to \$533.6 million or 1.25% of total loans and leases outstanding compared to \$539.1 million or 1.22% of total loans and leases outstanding at December 31, 2009. Loans and leases past due 30-89 days, excluding credit card loans, student loans and loans in nonperforming status, amounted to \$1,477.0 million or 3.00% of total loans and leases at March 31, 2009. Since March 31, 2009, loans and leases past due 30-89 days declined \$586.7 million in the second quarter of 2009, declined \$224.2 million in the third quarter of 2009, declined \$127.0 million in the fourth quarter of 2009 and declined \$5.5 million in the first quarter of 2010.

Table of Contents

The following table presents the reconciliation of the allowance for loan and lease losses for the current quarter and the prior four quarters:

Reconciliation of Allowance for Loan and Lease Losses
(\$000's)

	2010		2009		
	First	Fourth	Third	Second	First
	Quarter	Quarter	Quarter	Quarter	Quarter
Beginning balance	\$1,480,470	\$1,413,743	\$1,367,782	\$1,352,117	\$1,202,167

Ending balance	\$1,515,154	\$1,480,470	\$1,413,743	\$1,367,782	\$1,352,117

Summary of Net Charge-Offs on Loans and Leases
(\$000's)

	2010		2009		
	First	Fourth	Third	Second	First
	Quarter	Quarter	Quarter	Quarter	Quarter
Net charge-offs:					

Commercial loans and leases	\$ 134,093	\$ 86,010	\$ 205,477	\$ 66,769	\$ 60,722
Commercial real estate	53,363	78,380	69,558	55,306	34,007
Residential real estate	32,450	75,317	47,227	204,497	27,767
Construction and development	159,664	270,310	171,457	235,296	176,447
Home equity loans and lines of credit	34,133	34,631	29,159	33,438	19,353
Personal loans and leases	9,725	27,657	9,862	8,021	9,678
Net charge-offs	\$ 423,428	\$ 572,305	\$ 532,740	\$ 603,327	\$ 327,974

Net charge-offs amounted to \$423.4 million or 3.94% of average loans and leases in the first quarter of 2010 compared to \$572.3 million or 5.01% of average loans and leases in the fourth quarter of 2009 and \$328.0 million or 2.67% of average loans and leases in the first quarter of 2009. Included in net charge-offs for the periods presented in the table above were the net charge-offs related to the loans that were sold during 2010 and 2009.

Compared to the fourth quarter of 2009, every loan and lease type experienced a decline in net charge-offs in the first quarter of 2010 except net charge-offs for commercial loans and leases. Included in net charge-offs for commercial loans and leases for the three months ended March 31, 2010 was a \$50.0 million charge-off related to a loan to a bank holding company as previously discussed.

Net charge-offs for construction and development loans represented 37.7% of total net charge-offs in the first quarter of 2010 and consistent with prior quarters, was the largest concentration of net charge-offs across the various loan types.

Net charge-offs related to Arizona were \$129.5 million and net charge-offs related to Florida were \$55.1 million in the first quarter of 2010. Together, the net charge-offs related to Arizona and Florida accounted for 43.6% of total net charge-offs in the first quarter of 2010. Excluding the charge-off related to the loan to a bank holding company that was not related to Arizona or Florida, net charge-offs related to Arizona and Florida represented 49.4% of the total net charge-offs reported in the first quarter of 2010. Although net charge-offs in Arizona and Florida continue to be the largest geographical proportion of the Corporation's net charge-offs, the amount of net charge-offs in both Arizona and Florida decreased. Compared to the fourth quarter of 2009, net charge-offs in Arizona decreased \$57.2 million or 30.7% and net charge-offs in Florida decreased \$52.7 million or 48.9%. Net charge-offs in Arizona averaged \$215.4 million per quarter and net charge-offs in Florida averaged \$59.5 million per quarter in 2009. Generally, net charge-off activity in Arizona is exhibiting a shift from larger commercial construction and development loans to smaller-balance consumer-related loans.

Table of Contents

As previously discussed, real estate related loans continue to be the primary source of the elevated levels in nonperforming loans and leases and net charge-offs in the first quarter of 2010. Real estate related loans represented the majority of the Corporation's nonperforming loans and leases at March 31, 2010. Historically, the Corporation's loss experience with real estate loans has been relatively low due to the sufficiency of the underlying real estate collateral. In a stressed real estate market, the value of the collateral securing the loans has become one of the most important factors in determining the amount of loss incurred and the appropriate amount of allowance for loan and lease losses to record at the measurement date. The likelihood of losses that are equal to the entire recorded investment for a real estate loan is remote. However, in many cases, rapidly declining real estate values have resulted in the determination that the estimated value of the collateral was insufficient to cover all of the recorded investment in the loan which has required significant additional charge-offs. Declining collateral values have significantly contributed to the elevated levels of net charge-offs and the increase in the provision for loan and lease losses that the Corporation experienced in 2009 and 2008. Management believes real estate market conditions may be beginning to exhibit some signs of stabilization and improvement.

The amount of cumulative net charge-offs recorded on the Corporation's nonperforming loans outstanding at March 31, 2010 was approximately \$827.6 million or 55.6% of the unpaid principal balance of the affected nonperforming loans and 29.8% of the unpaid principal balance of its total nonperforming loans outstanding at March 31, 2010. These charge-offs have reduced the carrying value of these nonperforming loans and leases which reduced the allowance for loan and lease losses required at the measurement date.

Table of Contents

Consolidated Loan and Lease Risk Profile

In determining the adequacy of the allowance for loan and lease losses, management considers a number of factors to assess the risk and determine the amount of inherent loss in the portfolio at the measurement date. The tables below present certain statistics that are indicators of credit risk by loan type and provides supplemental information that, together with the previous discussion, is intended to assist in obtaining an understanding of the current credit risks that are in each loan type.

	Commercial (\$ in millions)			
	March 31,	% of	December	% of
	2010	Consolidated	31,	Consolidated
		Total	2009	Total
Loans and leases	\$ 12,315.5	28.9 %	\$ 12,949.9	29.3 %
Nonaccrual loans and leases	252.7	12.9	350.5	17.2
Renegotiated loans	64.3	8.8	46.3	5.8
Loans and leases past due 30-89 days	71.7	10.2	56.9	8.0
Quarter-to-date net charge-offs	134.1	31.7	86.0	15.0

Commercial loans and leases are extended across many industry types that at March 31, 2010 included: manufacturing (24%), wholesale trade (15%), finance and insurance (10%), retail trade (8%), real estate (7%), construction (5%), professional (5%), management companies (4%), health care (3%), agriculture (4%) and transportation and warehousing (4%).

Commercial loans and leases are evaluated for the adequacy of repayment sources at the time of approval and are regularly reviewed for any possible deterioration in the ability of the borrower to repay the loan. Collateral varies by individual customer and may include accounts receivable, inventory, equipment, deposits, securities, personal guarantees, general business security agreements and real estate.

Commercial loans and leases are associated with customers located in Wisconsin (42%), Minnesota (14%), Missouri (10%), Illinois (6%), Arizona (4%), Indiana (4%), Florida (3%) and Kansas (3%).

As a result of the present state of the economy, the Corporation has observed lower utilization of credit lines and seasonal borrowing from existing customers compared with prior years as commercial customers focus on expense management and debt reduction by delaying capital expenditures and reducing working capital demand. Commercial loan and lease balances are expected to contract until economic improvement takes stronger hold.

Nonperforming commercial loans and leases amounted to \$252.7 million at March 31, 2010 compared to \$350.5 million at December 31, 2009, a net decrease of \$97.8 million. Approximately \$50.0 million of the decline was due to a loan to a bank holding company that was charged-off during the first quarter of 2010. At December 31, 2009, that loan was the Corporation's largest single nonperforming loan outstanding. That loan had been fully reserved since being placed in nonperforming status earlier in 2009.

Net charge-offs related to loans to bank holding companies amounted to \$157.8 million for the year ended December 31, 2009. At March 31, 2010, loans outstanding to bank holding companies were approximately \$467.0 million of which \$11.5 million was in nonperforming status and \$31.6 million was identified as potential problem loans. The recent economic events and exposure to these loans was taken into consideration in the determination of the allowance for loan and lease losses.

The ratio of nonaccrual commercial loans and leases to total commercial loans and leases at March 31, 2010 was 2.05%. The average annualized net charge-offs for commercial loans and leases over the past nine quarters based on end of period loans were 2.3%. Excluding the charge-offs relating to loans to bank holding companies, the average annualized net charge-offs for commercial loans and leases over the past nine quarters based on end of period loans were 1.6%.

Table of Contents

	Commercial Real Estate (\$ in millions)			
	March 31, 2010	% of Consolidated Total	December 31, 2009	% of Consolidated Total
Loans	\$ 13,532.0	31.7 %	\$ 13,645.9	30.9 %
Nonaccrual loans	657.1	33.6	584.9	28.6
Renegotiated loans	118.1	16.1	90.9	11.5
Loans past due 30-89 days	159.2	22.6	135.0	19.0
Quarter-to-date net charge-offs	53.4	12.6	78.4	13.7

Commercial real estate loans include multi-family properties and business purpose loans secured by 1-4 family residences (26%), industrial (17%), office (14%), retail (14%), farmland (6%), lodging (7%) and medical facilities (4%). Commercial real estate loans as presented do not include commercial construction and land development loans.

The Corporation has established policies that set standards for maximum commercial mortgage amounts by type of property, loan terms, pricing structures, loan-to-value limits by property type, minimum requirements for initial investment and maintenance of equity by the borrower, borrower net worth, property cash flow and debt service coverage as well as policies and procedures for granting exceptions to established underwriting standards. Commercial mortgages are evaluated for adequacy of repayment sources at the time of approval and regularly reviewed for any possible deterioration in the ability of the borrower to repay the loan.

Commercial real estate loans are located primarily in the Midwest: Wisconsin (45%), Minnesota (12%), Missouri (8%), Illinois (5%), Kansas (3%) and Indiana (3%). Commercial real estate loans in higher risk markets include Arizona (7%) and Florida (8%).

As a result of the economy, the Corporation has experienced minimal new development activity. Compared to the first quarter of 2009, average commercial real estate loans increased \$0.7 billion or 5.6% in the first quarter of 2010. The majority of that reported growth represents the migration of construction loans to commercial real estate loans once construction is completed. As a result of the commercial real estate lending environment, the Corporation has provided interim financing for post-construction loans more frequently than it had historically and expects this trend to continue until such time as the liquidity in the commercial real estate lending environment normalizes. Interim financing is structured to ensure a significant amount of the income generated from the commercial real estate project is used to pay interest and reduce outstanding principal.

At March 31, 2010, commercial real estate loans consisted of business real estate loans of \$9,212.8 million, multi-family properties and business purpose loans secured by 1-4 family residences of \$3,556.5 million and farmland loans of \$762.7 million. At March 31, 2010, nonperforming business real estate loans amounted to \$487.4 million or 5.3% of total business real estate loans, nonperforming multi-family properties and business purpose loans secured by 1-4 family residences amounted to \$153.7 million or 4.3% of total multi-family properties and business purpose loans secured by 1-4 family residences and nonperforming farmland loans amounted to \$16.0 million or 2.1% of total farmland loans.

At March 31, 2010, approximately 37% of the business real estate loans were owner-occupied. Owner-occupied real estate loans are generally expected to have lower levels of default risk.

At March 31, 2010, six loans representing 32.2% of total nonaccrual commercial real estate loans and two loans representing 70.9% of total renegotiated commercial real estate loans related to one credit relationship that consists of multiple commercial real estate loans for geographically dispersed commercial real estate investments related to the lodging industry that was placed in nonperforming and renegotiated status in 2009.

The ratio of nonaccrual commercial real estate loans to total commercial real estate loans at March 31, 2010 was 4.86%. The ratio of nonaccrual commercial real estate loans to total commercial real estate loans in Arizona and Florida at March 31, 2010 was 3.96% and 10.07%, respectively. Nonaccrual commercial real estate loans in Arizona and Florida amounted to \$150.5 million or 22.9% of total nonaccrual commercial real estate loans at March 31, 2010.

Table of Contents

The average annualized net charge-offs for commercial real estate loans in 2009 based on end of period loans was 1.7%. The average annualized net charge-offs for commercial real estate loans during the first quarter of 2010 based on end of period loans was 1.6%.

	Residential Real Estate (\$ in millions)			
	March 31, 2010	% of Consolidated Total	December 31, 2009	% of Consolidated Total
Loans	\$ 4,823.8	11.3 %	\$ 4,968.9	11.2 %
Nonaccrual loans	269.6	13.8	206.1	10.1
Renegotiated loans	282.0	38.5	397.0	50.0
Loans past due 30-89 days	170.8	24.3	193.2	27.3
Quarter-to-date net charge-offs	32.4	7.7	75.3	13.2

Consistent with long standing practices, the Corporation does not originate sub-prime mortgages, variable interest-only payment plans, or mortgage loans that permit negative amortization. The Corporation does not originate loans with below market or so-called teaser interest rates at closing and then increase after some contractual period of time.

Residential real estate loans are concentrated in Arizona (39%) and Wisconsin (33%).

Throughout 2009 and the first quarter of 2010, the Corporation sold over 90% of its residential real estate production to the secondary market. At March 31, 2010, the residential real estate portfolio consisted of approximately 52% of residential real estate loans that were originated after 2006, 17% that were originated in 2004 and 31% that were originated in 2005 and 2006. Loans originated in 2005 through 2007 have higher potential loss severity in the event of default because the collateral values underlying these loans has experienced the greatest depreciation in value.

Residential real estate loans in Arizona have elevated levels of risk. At March 31, 2010, Arizona residential real estate loans amounted to \$1,853.6 million. Nonperforming residential real estate loans in Arizona amounted to \$168.0 million or 9.06% of total Arizona residential real estate loans. Nonperforming residential real estate loans in Arizona represented 62.3% of total nonperforming residential real estate loans.

The ratio of nonaccrual residential real estate loans to total residential real estate loans at March 31, 2010 was 5.59%. In Wisconsin, the ratio of nonaccrual residential real estate loans to total residential real estate loans at March 31, 2010 was 2.07%.

At March 31, 2010, approximately 81.4% of renegotiated residential real estate loans were in Arizona.

The average annualized net charge-offs for residential real estate loans during 2009 based on end of period loans was 6.7%. During 2009, the Corporation completed two bulk loan sales and sold \$341.6 million of nonperforming and potential nonperforming residential real estate loans. The average annualized net charge-offs for residential real estate loans in 2009 based on end of period residential real estate loans and excluding the net charge-offs associated with the loan sales was 3.0%. The average annualized net charge-offs for residential real estate loans for the first quarter of 2010 based on end of period loans was 2.7%.

Table of Contents

	Construction and Development (\$ in millions)			
	March 31, 2010	% of Consolidated Total	December 31, 2009	% of Consolidated Total
Loans	\$ 5,105.6	12.0 %	\$ 5,538.9	12.5 %
Nonaccrual loans	681.5	34.9	807.4	39.5
Renegotiated loans	223.2	30.5	147.9	18.6
Loans past due 30-89 days	218.0	30.9	228.1	32.2
Quarter-to-date net charge-offs	159.7	37.7	270.3	47.2

Construction and development loans consist of commercial construction, commercial land, construction by developers, residential land and construction by individuals.

The cumulative net charge-offs for construction and development loans was 52.3% of total loan and lease cumulative net charge-offs for the nine quarters ended March 31, 2010. The average annualized net charge-offs for construction and development loans over the past nine quarters based on end of period loans was 11.9%. Those losses were predominantly associated with construction and development loans located in Florida and Arizona.

The Corporation has significantly reduced the construction and development loan portfolio, which at its peak in 2007, was approximately 23% of total loans and leases outstanding. The Corporation continues to reduce the construction and development portfolio, especially in Arizona. The Corporation intends to reduce its concentration in these types of loans to its corporate goal of less than 10% of total consolidated loans and leases. Construction and development loans were slightly less than 12% of total consolidated loans and leases at March 31, 2010.

Since March 31, 2009, nonperforming construction and development loans declined \$27.1 million in the second quarter of 2009, declined \$58.9 million in the third quarter of 2009, declined \$177.1 million in the fourth quarter of 2009 and declined \$125.9 million in the first quarter of 2010. The decrease in nonperforming construction and development loans was primarily due to reduced levels of new nonperforming loans, restructurings, loan sales and charge-offs. The reduced levels of new nonperforming loans reflect the decline in volume of new larger construction loans transferring to nonperforming status, especially in Florida and Arizona.

Residential land loans have higher potential loss severity in the event of default because the collateral values underlying these loans have experienced the greatest depreciation in value especially in Arizona. At March 31, 2010, residential land loans amounted to \$1,424.7 million or 27.9% of total construction and development loans compared to \$1,574.3 million or 28.4% of total construction and development loans at December 31, 2009, a decrease of \$149.6 million or 9.5%. Residential land loans in Arizona were 54.6% of total residential land loans at March 31, 2010 and 55.3% of total residential land loans at December 31, 2009. At March 31, 2010, nonperforming residential land loans amounted to \$223.9 million or 15.7% of total residential land loans compared to nonperforming residential land loans of \$273.4 million or 17.4% of total residential land loans at December 31, 2009, a decrease of \$49.5 million or 18.1%. Nonperforming residential land loans in Arizona were 45.3% of total nonperforming residential land loans at March 31, 2010 and 44.0% of total nonperforming residential land loans at December 31, 2009. Nonperforming residential land loans were 32.9% of total nonperforming construction and development loans at March 31, 2010 and 33.9% of total nonperforming construction and development loans at December 31, 2009.

Construction and development loans in Florida and Arizona amounted to \$1,730.0 million or 33.9% of total construction and development loans at March 31, 2010 compared to \$2,019.5 million or 36.5% of total construction and development loans at December 31, 2009, a decrease of \$289.5 million or 14.3%. At March 31, 2010, nonperforming construction and development loans in Florida and Arizona amounted to \$289.6 million or 16.7% of total construction and development loans in Florida and Arizona compared to nonperforming loans of \$406.2 million or 20.1% of total construction and development loans in Florida and Arizona at December 31, 2009, a decrease of \$116.6 million or 28.7%. Nonperforming construction and development loans in Florida and Arizona represented 42.5% of total nonperforming construction and development loans at March 31, 2010 and 50.3% of total nonperforming construction and development loans at December 31, 2009. Renegotiated construction and development loans in Florida and Arizona amounted to \$116.2 million or 52.1% of total renegotiated construction and development loans at March 31, 2010 compared to \$139.4 million or 94.2% of total renegotiated construction and development loans at December 31, 2009, a decrease of \$23.2 million or 16.6%. The Corporation expects that the bulk of the credit quality issues related to larger Arizona and Florida construction and development loans have been realized.

Table of Contents

	Consumer (\$ in millions)			
	March 31, 2010	% of Consolidated Total	December 31, 2009	% of Consolidated Total
Loans and leases	\$ 6,871.9	16.1 %	\$ 7,114.0	16.1 %
Nonaccrual loans and leases	92.9	4.8	95.9	4.6
Renegotiated loans	44.2	6.1	111.4	14.1
Loans and leases past due 30-89 days	84.7	12.0	95.3	13.5
Quarter-to-date net charge-offs	43.8	10.3	62.3	10.9

The majority of consumer loans and leases are home equity loans and lines of credit which amounted to \$4.6 billion at March 31, 2010. Home equity lines of credit represent 58% and home equity loans represent 42% of total home equity loans and lines of credit. Approximately 45% of home equity loans and lines of credit are secured by first mortgages. At March 31, 2010, home equity lines of credit outstanding (amount drawn) represented approximately 60.1% of the total lines of credit outstanding compared to a three year average of 56.1%. During 2005 and 2006, when real estate market values were at a peak, the majority of the Corporation's wholesale originations were sold.

The largest geographic concentration of home equity loans and lines of credit is in Wisconsin (36%) with the remainder geographically dispersed.

The average annualized net charge-offs for home equity loans and lines of credit over the past nine quarters based on end of period loans was 1.8%. The average annualized net charge-offs for home equity loans and lines of credit for the twelve months ended December 31, 2009 based on end of period loans was 2.4%. The average annualized net charge-offs for home equity loans and lines of credit for the first quarter of 2010 based on end of period loans was 3.0%.

Credit card loans amounted to \$276.2 million or 0.6% of total loans and leases at March 31, 2010. Credit cards are not a significant component of the Corporation's loan and lease portfolio.

Provision for Loan and Lease Losses

Consistent with the credit quality trends noted above, the provision for loan and lease losses amounted to \$458.1 million for the first quarter ended March 31, 2010. By comparison, the provision for loan and lease losses amounted to \$639.0 million in the fourth quarter of 2009 and \$477.9 million for the first quarter of 2009. The provision for loan and lease losses is the amount required to establish the allowance for loan and lease losses at the required level after considering charge-offs and recoveries. The ratio of the allowance for loan and lease losses to total loans and leases was 3.55% at March 31, 2010 compared to 3.35% at December 31, 2009 and 2.75% at March 31, 2009.

The decline in nonperforming loans for the third consecutive quarter, continued improvement in delinquencies for the fourth consecutive quarter, reduced levels of loans going into nonperforming status and lower levels of net charge-offs have resulted in the lower provision for loan and lease losses this quarter compared to the provisions for loan and lease losses reported in any quarter of 2009. The Corporation's credit quality statistics as of and for the three months

ended March 31, 2010 reinforced recent trends with additional positive evidence that the Corporation has experienced credit improvement. Management remains cautiously optimistic that these trends will continue but recognizes that the improving economy remains fragile and unemployment levels continue to be elevated. Management expects it will take a few more quarters to determine if these recent trends are indicative of a longer-term sustainable trend towards normal credit conditions.

Despite those credit trends, the reported amount of the Corporation's nonperforming loans and leases continue to be elevated. As demonstrated in 2008 and 2009, the credit environment and underlying collateral values can change rapidly. As a result, the Corporation continued to increase the allowance for loan and leases in the first quarter of 2010. There are numerous unknown factors at this time that will ultimately affect the timing and amount of nonperforming loans and leases, net charge-offs and the provision for loan and lease losses that will be recognized in the remainder of 2010. The timing and amount of charge-offs will continue to be influenced by the Corporation's strategies for managing its nonperforming loans and leases.

Table of Contents

The Corporation will continue to proactively manage its potential problem loans and nonperforming loans and leases and be aggressive to isolate, identify and assess its underlying loan and lease portfolio credit quality. The Corporation has developed and continues to develop strategies, such as selective sales of nonperforming loans and restructuring loans to qualified borrowers, to mitigate its loss exposure. Construction and development loans tend to be more complex and may take more time to attain a satisfactory resolution. Depending on the facts and circumstances, acquiring real estate collateral in partial or total satisfaction of problem loans may continue to be the best course of action to take in order to mitigate the Corporation's exposure to loss.

OTHER INCOME

Total other income in the first quarter of 2010 amounted to \$227.6 million compared to \$176.7 million in the same period last year, an increase of \$50.9 million or 28.8%. During the first quarter of 2010, the Corporation sold its merchant portfolio processing which was the primary contributor to the increase in other income in the first quarter of 2010 compared to the first quarter of 2009.

Wealth management revenue amounted to \$68.1 million in the first quarter of 2010 compared to \$62.7 million in the first quarter of 2009, an increase of \$5.4 million or 8.7%. Assets under management were \$32.7 billion at March 31, 2010 compared to \$32.9 billion at December 31, 2009 and \$29.7 billion at March 31, 2009. Assets under administration were \$124.6 billion at March 31, 2010 compared to \$122.3 billion at December 31, 2009 and \$101.5 billion at March 31, 2009. During the first quarter of 2010, strong revenue growth was experienced in both personal and institutional trust services. Wealth management revenue will continue to be affected by market volatility and direction through the remainder of 2010.

For the three months ended March 31, 2010, service charges on deposits amounted to \$32.1 million compared to \$35.3 million for the three months ended March 31, 2009, a decrease of \$3.2 million or 9.1%. A portion of this source of fee income is sensitive to interest rates. Competitive pricing in the form of earnings credits was used to encourage customers to maintain higher deposit balances resulting in lower fee income.

Total mortgage banking revenue was \$6.4 million in the first quarter of 2010 compared to \$10.8 million in the first quarter of 2009, a decrease of \$4.4 million. Reduced sales volume and increased recourse obligation exposure resulted in lower fee income from mortgage banking. Throughout 2009 and the first quarter of 2010, the Corporation sold substantially all of its residential real estate production to the secondary market. Residential mortgage and home equity loans sold in the secondary market amounted to \$0.4 billion and \$0.7 billion in the three months ended March 31, 2010 and 2009, respectively.

Net investment securities gains in the three months ended March 31, 2010 and 2009 were not significant.

Bank-owned life insurance revenue amounted to \$10.8 million for the three months ended March 31, 2010 compared to \$9.3 million for the three months ended March 31, 2009, an increase of \$1.5 million or 15.9%. The recovery in the value of the underlying invested assets throughout 2009 has resulted in improved crediting rates in the first quarter of 2010 compared to the first quarter of 2009.

Gain on the termination of debt amounted to \$10.3 million and \$3.1 million for the three months ended March 31, 2010 and 2009, respectively. During the first quarter of 2010, the Corporation re-acquired and extinguished long term borrowings issued by the Corporation's wholly-owned subsidiary, M&I Marshall & Ilsley Bank ("M&I Bank") with a par value of \$100.9 million. During the first quarter of 2009, the Corporation re-acquired and extinguished long term borrowings issued by the Corporation and M&I Bank with a par value of \$42.1 million.

During the first quarter of 2010, the Corporation sold its merchant portfolio processing at a gain of \$48.3 million. Like other bank holding companies, the Corporation determined that processing, clearing, settlement and related services with respect to credit card and debit card transactions with merchants was not a significant source of revenue or part of the Corporation's core operating activities.

Table of Contents

OREO income primarily consists of gains from the sale of OREO and amounted to \$6.1 million in the first quarter of 2010 compared to \$2.6 million in the first quarter of 2009. The carrying value of OREO properties sold amounted to \$105.9 million in the first quarter of 2010 compared to \$52.7 million in the first quarter of 2009.

Other income in the first quarter of 2010 amounted to \$45.4 million compared to \$52.9 million in the first quarter of 2009, a decrease of \$7.5 million or 14.1%. Write-downs associated with loans available for sale (other than mortgage loans originated for sale) are reported as a reduction of other income in the Consolidated Statements of Income and amounted to \$7.2 million in the first quarter of 2010. There were no write-downs associated with loans available for sale in the first quarter of 2009.

OTHER EXPENSE

Total other expense for the three months ended March 31, 2010 amounted to \$371.5 million compared to \$345.2 million for the three months ended March 31, 2009, an increase of \$26.3 million or 7.6%.

Total other expense for the three months ended March 31, 2010 compared to the three months ended March 31, 2009 included increased credit and collection-related expenses and increased expenses associated with the acquisition, valuation and holding of OREO properties. Approximately \$4.6 million of the operating expense growth in the first quarter of 2010 compared to the first quarter of 2009 was attributable to these items.

Approximately \$12.2 million of the operating expense growth in the first quarter of 2010 compared to the first quarter of 2009 was attributable to the increased expense related to FDIC insurance premiums for insurance on deposits which included the cost of participating in the TAGP.

The Corporation's expense in the three months ended March 31, 2010 compared to the three months ended March 31, 2009, excluding the items discussed above, increased \$9.5 million or 3.3%.

Expense control is sometimes measured in the financial services industry by the efficiency ratio statistic. The efficiency ratio is calculated by taking total other expense divided by the sum of total other income (including Private Equity revenue but excluding other investment securities gains or losses) and net interest income on a fully taxable equivalent basis. The Corporation's efficiency ratios for the three months ended March 31, 2010 and 2009 were:

	Three Months Ended March 31, 2010 2009	
Efficiency Ratio	58.4%	59.0%

The efficiency ratio for the first quarter of 2010 was adversely affected by the increase in credit and collection-related expenses and net expenses associated with OREO properties. The efficiency ratio for the first quarter of 2010 was positively affected by the gains from the sale of the merchant portfolio processing. The approximate adverse net impact of these items to the Corporation's efficiency ratio for the three months ended March 31, 2010 from these items was approximately 2.3%.

The efficiency ratio for the first quarter of 2009 was also adversely affected by the increase in credit and collection-related expenses and net expenses associated with OREO properties. The estimated adverse net impact to

the Corporation's efficiency ratio for the three months ended March 31, 2009 from these items was approximately 6.9%.

Salaries and employee benefits expense amounted to \$161.6 million in the first quarter of 2010 compared to \$155.2 million in the first quarter of 2009, an increase of \$6.4 million or 4.1%. Salaries and employee benefits related to credit and collection increased approximately \$0.9 million in the three months ended March 31, 2010 compared to the three months ended March 31, 2009. The number of full-time equivalent employees decreased approximately 4.3% from at March 31, 2010 compared to March 31, 2009.

Table of Contents

Net occupancy and equipment expense, software expenses, processing charges and supplies, printing, postage and delivery expenses amounted to \$82.2 million in the first quarter of 2010 compared to \$83.2 million for the three months ended March 31, 2009, a decrease of \$1.0 million or 1.2%.

As previously discussed, FDIC insurance premiums on deposits amounted to \$27.3 million in the first quarter of 2010 compared to \$15.1 million in the first quarter of 2009, an increase of \$12.2 million or 80.4%.

Professional services expense amounted to \$20.8 million in the first quarter of 2010 compared to \$19.2 million in the first quarter of 2009, an increase of \$1.6 million or 8.4%. The elevated level of legal fees and other professional fees associated with problem loans decreased \$1.2 million in the first quarter of 2010 compared to the first quarter of 2009. That decrease was offset by increased consulting fees associated with numerous items including updating certain internal systems and processes.

Amortization of intangibles amounted to \$5.1 million for the quarter ended March 31, 2010 compared to \$5.8 million for the quarter ended March 31, 2009. Goodwill is tested for impairment using a two-step process that begins with an estimation of the fair value of a reporting unit. The first step is a screen for potential impairment and the second step measures the amount of impairment, if any. The Corporation has elected to perform its annual test for impairment as of June 30th. As a result of performing the annual test in 2009, the Corporation determined that the recorded goodwill was not impaired. There have been no events since the annual test to indicate that it is more likely than not that the recorded goodwill had become impaired.

OREO expenses amounted to \$37.5 million in the first quarter of 2010 compared to \$32.6 million in the first quarter of 2009, an increase of \$4.9 million. The increase for the three months ended March 31, 2010 compared to the three months ended March 31, 2009 was due to the costs of acquiring and holding the increased levels of foreclosed properties. Valuation write-downs and losses on disposition, which reflect both the increased levels of foreclosed properties and the decline in real estate values, amounted to \$24.9 million for the three months ended March 31, 2010 compared to \$25.0 million for the three months ended March 31, 2009 and was relatively unchanged. Valuation write-downs and losses on disposition were \$16.6 million less in the first quarter of 2010 compared to the fourth quarter of 2009. The Corporation expects that higher levels of expenses associated with acquiring and holding foreclosed properties will continue. Valuation write-downs and losses on disposition will depend on real estate market conditions which may be beginning to exhibit some signs of stabilization and improvement.

Other expense amounted to \$37.0 million in the first quarter of 2010 compared to \$34.1 million in the first quarter of 2009, an increase of \$2.9 million or 8.5%. Losses from exercising the call option on brokered certificate of deposits increased \$3.2 million in the first quarter of 2010 compared to the first quarter of 2009. During the first quarter of 2010, the Corporation terminated a cash flow hedge at a loss of \$1.8 million. Those losses were offset by the reduced provision for losses for unfunded commitments and other off-balance sheet exposures such as letters of credit. The provision for losses for unfunded commitments and other off-balance sheet exposures was \$2.3 million less in the first quarter of 2010 compared to the first quarter of 2009. The reduced provision for losses for unfunded commitments and other off-balance sheet exposures primarily reflects the lower amount of unfunded commitments outstanding at March 31, 2010.

INCOME TAXES

For the three months ended March 31, 2010, the benefit for income taxes amounted to \$83.6 million or 42.1% of the pre-tax loss, compared to the benefit for income taxes for the three months ended March 31, 2009 of \$153.0 million or 62.5% of the pre-tax loss.

As previously discussed, the Acts (health care reform legislation) were signed in to law during March 2010. The Acts effectively change the income tax treatment of federal subsidies paid to sponsors of retiree health benefit plans that provide qualifying prescription drug benefits. Under the Acts, beginning in 2013 the Corporation's income tax deduction for the costs of providing Medicare Part D-equivalent prescription drug benefits to retirees will be reduced by the amount of the subsidy. Under U.S. generally accepted accounting principles, any impact from a change in tax law must be recognized in earnings in the period enacted regardless of the effective date. As a result, the Corporation recognized a noncash charge of \$4.1 million for the write-off of deferred tax assets to reflect the change in tax treatment of the federal subsidy.

Table of Contents

In February 2009, the State of Wisconsin passed legislation that requires combined reporting for state income tax purposes effective January 1, 2009. As a result, the Corporation recorded an additional income tax benefit of \$51.0 million to recognize certain state deferred tax assets, which included the reduction of a valuation allowance for Wisconsin net operating losses.

LIQUIDITY AND CAPITAL RESOURCES

Total equity was \$6.87 billion or 12.15% of total consolidated assets at March 31, 2010 compared to \$6.99 billion or 12.21% of total consolidated assets at December 31, 2009 and \$6.25 billion or 10.12% of total consolidated assets at March 31, 2009.

Total equity at March 31, 2010 and December 31, 2009 was affected by the following transactions:

On October 27, 2009, the Corporation announced the closing of its public offering of 156.4 million shares of its common stock at \$5.75 per share. The 156.4 million shares included 20.4 million shares issued pursuant to an option granted to the underwriters by the Corporation, which was exercised in full. The proceeds, net of underwriting discounts and commissions and offering expenses, from the issuance of shares in this public offering amounted to \$863.1 million.

On June 17, 2009, the Corporation announced the closing of its public offering of 100.0 million shares of its common stock at \$5.75 per share. The 100.0 million shares included 13.0 million shares issued pursuant to an option granted to the underwriters by the Corporation, which was exercised in full. The proceeds, net of underwriting discounts and commissions and offering expenses, from the issuance of shares in this public offering amounted to \$551.8 million.

The Corporation also sold on an at-the-market basis 670,300 shares of its common stock during the second quarter of 2009 resulting in proceeds of \$4.5 million, net of fees and commissions and offering expenses.

On February 18, 2010, the Corporation announced that its Board of Directors declared the first quarter cash dividend of \$0.01 per share on its common stock.

During the first quarter of 2010, the Corporation issued 225,303 shares of its common stock for \$1.5 million to fund its obligation under its employee stock purchase plan (the "ESPP"). During 2009, the Corporation issued 1,409,358 shares of its common stock for \$6.9 million to fund its obligation under the ESPP, of which 383,890 shares of its common stock for \$1.8 million was issued during the first quarter of 2009.

On November 14, 2008, as part of the Corporation's participation in the CPP, the Corporation entered into a Letter Agreement with the UST. Pursuant to the Securities Purchase Agreement – Standard Terms (the "Securities Purchase Agreement") attached to the Letter Agreement, the Corporation sold 1,715,000 shares of the Corporation's Senior Preferred Stock, having a liquidation preference of \$1,000 per share, for a total price of \$1,715 million. The Senior Preferred Stock qualifies as Tier 1 capital and pays cumulative compounding dividends at a rate of 5% per year for the first five years and 9% per year thereafter.

Under the terms of the Securities Purchase Agreement, except as described below, the Corporation may not redeem the Senior Preferred Stock during the first three years that it is outstanding. After the first three years, the Corporation may redeem shares of the Senior Preferred Stock for the per share liquidation preference of \$1,000 plus any accrued and unpaid dividends. The Corporation is permitted, subject to regulatory approval, to redeem in whole or in part the

Senior Preferred Stock during the first three years only if (a) it has received aggregate gross proceeds of not less than \$428.75 million from one or more “Qualified Equity Offerings” (as defined in the Securities Purchase Agreement), and (b) the aggregate redemption price of the Senior Preferred Stock redeemed does not exceed the aggregate net proceeds received by the Corporation from any such Qualified Equity Offerings.

Table of Contents

The Corporation received a total of \$1,419.4 million in aggregate net proceeds from the common stock offerings in 2009, which met the requirements for Qualified Equity Offerings. Any repurchase of the Senior Preferred Stock would be contingent upon the determination of the Board of Directors that such repurchase is in the best interests of the Corporation and its shareholders. Furthermore, any repurchase of the Senior Preferred Stock would be subject to consultation with and approval by the Corporation's banking regulators. To the extent the Corporation seeks such approval, there can be no assurance that such approval will be granted.

Pursuant to the American Recovery and Reinvestment Act, which was signed into law in February 2009, CPP participants are permitted to redeem the preferred stock issued under the CPP at any time, subject to consultation with the appropriate federal banking agency. However, the Corporation's Restated Articles of Incorporation contain the redemption restrictions described above. The Corporation may seek Board of Directors and shareholder approval in the future to amend the Restated Articles of Incorporation to allow the Corporation to redeem the Senior Preferred Stock at any time after consultation with the Federal Reserve Board.

Under the terms of the Securities Purchase Agreement, as long as any Senior Preferred Stock is outstanding, the Corporation may pay quarterly common stock cash dividends of up to \$0.32 per share, and may redeem or repurchase its common stock, provided that all accrued and unpaid dividends for all past dividend periods on the Senior Preferred Stock are fully paid. Prior to the third anniversary of the UST's purchase of the Senior Preferred Stock, unless Senior Preferred Stock has been redeemed or the UST has transferred all of the Senior Preferred Stock to third parties, the consent of the UST will be required for the Corporation to increase its common stock dividend to more than \$0.32 per share per quarter or repurchase its common stock or other equity or capital securities, other than in connection with benefit plans consistent with past practice and certain other circumstances specified in the Securities Purchase Agreement. The Senior Preferred Stock will be non-voting except for class voting rights on matters that would adversely affect the rights of the holders of the Senior Preferred Stock.

As a condition to participating in the CPP, the Corporation issued and sold to the UST a warrant (the "Warrant") to purchase 13,815,789 shares (the "Warrant Shares") of the Corporation's common stock, at an initial per share exercise price of \$18.62, for an aggregate purchase price of approximately \$257.25 million. The term of the Warrant is ten years. The Warrant is no longer subject to any contractual restrictions on transfer. The Warrant provides for the adjustment of the exercise price and the number of Warrant Shares issuable upon exercise pursuant to customary anti-dilution provisions, such as upon stock splits or distributions of securities or other assets to holders of the Corporation's common stock, and upon certain issuances of the Corporation's common stock at or below a specified price range relative to the initial exercise price. Pursuant to the Securities Purchase Agreement, the UST has agreed not to exercise voting power with respect to any shares of common stock issued upon exercise of the Warrant.

Pursuant to the Securities Purchase Agreement, until the UST no longer owns any shares of the Senior Preferred Stock, the Warrant or Warrant Shares, the Corporation's employee benefit plans and other executive compensation arrangements for its Senior Executive Officers must continue to comply in all respects with Section 111(b) of the Emergency Economic Stabilization Act and the rules and regulations of the UST promulgated thereunder.

The Securities Purchase Agreement permits the UST to unilaterally amend any provision of the Letter Agreement and the Securities Purchase Agreement to the extent required to comply with any changes in the applicable Federal statutes.

For accounting purposes, the proceeds of \$1,715 million were allocated between the preferred stock and the warrant based on their relative fair values. The initial value of the Warrant, which is classified as equity, was \$81.12 million. The entire discount on the Senior Preferred Stock, created from the initial value assigned to the Warrant, will be accreted over a five year period in a manner that produces a level preferred stock dividend yield which is

6.10%. At the end of the fifth year, the carrying amount of the Senior Preferred Stock will equal its liquidation value.

Preferred dividends accrued and discount accretion on the Senior Preferred Stock amounted to \$25.2 million for the quarter ended March 31, 2010. On February 16, 2010, the Corporation paid the quarterly preferred dividend covering the period from November 15, 2009 through February 15, 2010 in the amount of \$21.4 million.

The Corporation had a Stock Repurchase Program under which up to 12 million shares of the Corporation's common stock could be repurchased annually. As a result of the restrictions contained in the Securities Purchase Agreement, the Corporation allowed the Stock Repurchase Program to expire.

Table of Contents

At March 31, 2010, the net loss in accumulated other comprehensive income amounted to \$33.7 million, which represented a positive change in accumulated other comprehensive income of \$17.6 million since December 31, 2009. Net accumulated other comprehensive income associated with available for sale investment securities was a net gain of approximately \$12.7 million at March 31, 2010, compared to a net loss of \$13.0 million at December 31, 2009, resulting in a net gain of \$25.7 million over the three month period. The net unrealized loss associated with the change in fair value of the Corporation's derivative financial instruments designated as cash flow hedges increased \$7.7 million since December 31, 2009, and amounted to \$51.8 million at March 31, 2010, compared to a net loss of \$44.1 million at December 31, 2009. The amount required to adjust the Corporation's postretirement health benefit liability to its funded status included in accumulated other comprehensive income amounted to an unrealized gain of approximately \$5.4 million as of March 31, 2010.

The Corporation continues to have a strong capital base and its regulatory capital ratios are significantly above the minimum requirements as shown in the following tables.

Risk-Based Capital Ratios
(\$ in millions)

	March 31, 2010		December 31, 2009	
	Amount	Ratio	Amount	Ratio
Tier 1 Capital	\$ 5,173	11.09%	\$ 5,381	11.11%

-------------------------------------	-----------	-----------

The Corporation issued shares of its common stock on an at-the-market basis prior to the underwritten public offerings in 2009. The Corporation issued a total of 257.1 million shares of its common stock as a result of these transactions in 2009. The proceeds, net of underwriting discounts and commissions and offering expenses, from these issuances amounted to \$1,419.4 million.

The Corporation used the net proceeds of these offerings for general corporate purposes that included contributions of some portion of the net proceeds to the capital of its subsidiaries, which used these contributions for their general corporate purposes. The Corporation also used a portion of the net proceeds of these offerings to repurchase portions of its outstanding indebtedness.

The Corporation manages its liquidity to ensure that funds are available to each of its banks to satisfy the cash flow requirements of depositors and borrowers and to ensure the Corporation's own cash requirements are met. The Corporation maintains liquidity by obtaining funds from several sources.

Table of Contents

Average short-term investments in the form of average interest bearing deposits at other banks amounted to \$1.6 billion in the first quarter of 2010, a decrease of \$0.7 billion compared to the fourth quarter of 2009 and an increase of \$1.3 billion compared to the first quarter of 2009. At the present time, short-term investments represent the Corporation's most readily available source of liquidity. This source of liquidity reflects management's decision to maintain higher levels of liquid assets.

Another readily available source of liquidity to the Corporation is its investment portfolio. Investment securities available for sale, which totaled \$7.5 billion at March 31, 2010, represent a highly accessible source of liquidity. The Corporation's portfolio of held-to-maturity investment securities, which totaled \$0.1 billion at March 31, 2010, provides liquidity from maturities.

Depositors within the Corporation's defined markets are another source of liquidity. Core deposits (demand, savings, money market and consumer time deposits) averaged \$28.3 billion in the first quarter of 2010. The Corporation's banking affiliates may also access the federal funds markets or utilize collateralized borrowings such as treasury demand notes, FHLB advances or other forms of collateralized borrowings.

The Corporation's banking affiliates may use wholesale deposits, which include foreign (Eurodollar) deposits. Wholesale deposits, which averaged \$11.1 billion in the first quarter of 2010, are deposits generated through distribution channels other than the Corporation's own banking branches. The weighted average remaining term of outstanding brokered and institutional certificates of deposit at March 31, 2010 was 12.2 years. These deposits allow the Corporation's banking subsidiaries to gather funds across a national geographic base and at pricing levels considered attractive, where the underlying depositor may be retail or institutional. Access to wholesale deposits also provides the Corporation with the flexibility not to pursue single service time deposit relationships in markets that have experienced some unprofitable pricing levels.

The national capital markets represent a further source of liquidity to the Corporation.

The Corporation and/or M&I Bank may repurchase or redeem its outstanding debt securities from time to time, including, without limitation, senior and subordinated global bank notes, medium-term corporate notes, MiNotes or junior subordinated deferrable interest debentures and the related trust preferred securities. Such repurchases or redemptions may be made in open market purchases, in privately negotiated transactions or otherwise for cash or other consideration. Any such repurchases or redemptions will be made on an opportunistic basis as market conditions permit and are dependent on the Corporation's liquidity needs, compliance with any contractual or indenture restrictions, regulatory requirements and other factors the Corporation deems relevant. During the first quarter of 2010, the Corporation re-acquired and extinguished \$100.9 million of debt at a gain. The debt consisted of small blocks of various bank notes issued by M&I Bank. During the first quarter of 2009, the Corporation re-acquired and extinguished \$42.1 million of debt at a gain. The debt consisted of small blocks of various bank notes issued by the Corporation and M&I Bank.

On December 5, 2008, the Corporation announced that it and its eligible affiliates would be participating in a component of the FDIC's Temporary Liquidity Guarantee Program – the Transaction Account Guarantee Program (the "TAGP"). Under the TAGP, which had been initially extended until June 30, 2010, all noninterest-bearing transaction accounts (which the TAGP defines as including all noninterest-bearing personal and business checking accounts, NOW accounts earning no more than 0.5 percent interest, and Interest on Lawyer Trust Accounts) held at M&I's affiliate banks, are fully guaranteed by the FDIC for the entire amount in the account. Coverage under the TAGP is in addition to and separate from the coverage available under the FDIC's general deposit rules. Separately, Congress extended the temporary increase in the standard coverage of FDIC insurance on deposits to a limit of \$250,000 until December 31, 2013.

On April 13, 2010, the Board of Directors of the FDIC approved an interim rule to further extend the TAGP to December 31, 2010. The interim rule gives the the FDIC discretion to extend the program to the end of 2011, without additional rulemaking, if it determines that economic conditions warrant such an extension.

Due to the stressed economic conditions that existed in 2008 and 2009, the Corporation believes that its participation in the TAGP was warranted and that such participation had a positive affect on its deposit growth in 2009. The Corporation has determined that its participation in the program and the additional cost of participating in the program is no longer warranted. On April 30, 2010 the Corporation elected to opt out of the TAGP program extension. The impact of the opt-out to the Corporation is uncertain. However, the Corporation anticipates that certain NOW deposits and certain noninterest bearing deposits, will likely migrate to other deposit accounts, investment products or into products offered by other entities. The Corporation considers its liquidity position to be sufficiently adequate to manage through the effect of its election to opt-out of the TAGP program extension.

Table of Contents

Federal and state banking laws place certain restrictions on the amount of dividends and loans which a bank may make to its parent company. Such restrictions have not had, and are not expected to have, any material effect on the Corporation's ability to meet its cash obligations. The market impact of the recession and deterioration in the national real estate markets have resulted in a strain on liquidity in the financial services sector. However, the common stock issued in financing transactions in 2009 and participation in the CPP in 2008 provided the Corporation with \$3.1 billion in cash and significantly increased its regulatory and tangible capital levels. Management expects that it will continue to make use of a wide variety of funding sources, including those that have not shown the levels of stress demonstrated in some of the national capital markets. Notwithstanding the current national capital market impact on the cost and availability of liquidity, management believes that it has adequate liquidity to ensure that funds are available to the Corporation and each of its banks to satisfy their cash flow requirements, including the anticipated effect of its election to opt-out of the TAGP program extension previously discussed.

M&I Bank has implemented a global bank note program that permits it to issue and sell up to a maximum of US\$13.0 billion aggregate principal amount (or the equivalent thereof in other currencies) at any one time outstanding of its senior global bank notes with maturities of seven days or more from their respective date of issue and subordinated global bank notes with maturities more than five years from their respective date of issue. The notes may be fixed rate or floating rate and the exact terms will be specified in the applicable Pricing Supplement or the applicable Program Supplement. This program is intended to enhance liquidity by enabling M&I Bank to sell its debt instruments in global markets in the future without the delays that would otherwise be incurred. At March 31, 2010, approximately \$10.9 billion of new debt could be issued under M&I Bank's global bank note program.

Bank notes outstanding at March 31, 2010 amounted to \$2.5 billion of which \$1.5 billion is subordinated. A portion of the subordinated bank notes qualifies as supplementary capital for regulatory capital purposes.

During the second quarter of 2008, the Corporation filed a shelf registration statement with the Securities and Exchange Commission enabling the Corporation to issue up to 6.0 million shares of its common stock from time to time in connection with acquisitions by the Corporation and/or consolidated subsidiaries of the Corporation. At March 31, 2010, approximately 1.14 million shares of the Corporation's common stock could be issued under the shelf registration statement for future acquisitions.

During the fourth quarter of 2007, the Corporation filed a shelf registration statement pursuant to which the Corporation may issue corporate debt and/or equity securities with a relatively short lead time, subject to market conditions, and which may be used to register resales of securities acquired by shareholders in transactions exempt from registration under federal securities laws.

OFF-BALANCE SHEET ARRANGEMENTS

At March 31, 2010, there have been no other substantive changes with respect to the Corporation's off-balance sheet activities disclosed in the Corporation's Annual Report on Form 10-K for the year ended December 31, 2009. The Corporation continues to believe that based on the off-balance sheet arrangements with which it is presently involved, such off-balance sheet arrangements neither have, nor are reasonably likely to have, a material impact to its current or future financial condition, results of operations, liquidity or capital.

Table of Contents

CRITICAL ACCOUNTING POLICIES

The Corporation has established various accounting policies that govern the application of accounting principles generally accepted in the United States in the preparation of the Corporation's consolidated financial statements. The significant accounting policies of the Corporation are described in the footnotes to the consolidated financial statements contained in the Corporation's Annual Report on Form 10-K for the year ended December 31, 2009, and updated as necessary in its Quarterly Reports on Form 10-Q.

Certain accounting policies involve significant judgments and assumptions by management that may have a material impact on the carrying value of certain assets and liabilities. Management considers such accounting policies to be critical accounting policies. The judgments and assumptions used by management are based on historical experience and other factors, which are believed to be reasonable under the circumstances. Because of the nature of judgments and assumptions made by management, actual results could differ from these judgments and estimates which could have a material impact on the carrying values of assets and liabilities and the results of the operations of the Corporation. Management continues to consider the following to be those accounting policies that require significant judgments and assumptions:

Allowance for Loan and Lease Losses

The allowance for loan and lease losses represents management's estimate of probable losses inherent in the Corporation's loan and lease portfolio. Management's evaluation of the adequacy of the allowance for credit losses is an inherently subjective process impacted by many factors. Some factors considered in determining the adequacy of the allowance for credit losses are quantifiable while other factors require qualitative judgment. Management evaluates the allowance each quarter to determine that it is adequate to absorb these inherent losses. This evaluation is supported by a methodology that identifies estimated losses based on assessments of individual problem loans, historical loss patterns of homogeneous loan pools and adjustments to reflect current economic conditions. The inherent lagging of credit quality measurements relative to the performance of the loan portfolio and numerous other factors create degrees of imprecision in these measurements. Management considers the effect of imprecision and many other factors in determining the allowance for credit losses. In addition, environmental factors, including economic conditions and regulatory guidance, unique to each measurement date are also considered.

The Corporation's reserving methodology has the following components, which are collectively reported as the allowance for loan and lease losses. The entire allowance for loan and lease losses is available to absorb losses from loans and leases in any of the components.

Specific Reserve. A loan is impaired when, based on current information and events, it is probable that a creditor will be unable to collect all amounts due according to the contractual terms of the loan agreement. Nonaccrual loans, which the Corporation refers to as nonperforming loans, and troubled debt restructurings, which the Corporation refers to as renegotiated loans, meet the definition of an impaired loan. For impaired loans, impairment is measured using one of three alternatives: (1) the present value of expected future cash flows discounted at the loan's effective interest rate; (2) the loan's observable market price, if available; or (3) the fair value of the collateral less costs to sell for collateral dependent loans and loans for which foreclosure is deemed to be probable. In general, these loans have been internally identified as credits requiring management's attention due to underlying problems in the borrower's business or collateral concerns. This analysis considers expected future cash flows, the value of collateral and also other factors that may impact the borrower's ability to make payments when due.

All nonperforming loans greater than \$1.0 million and all renegotiated loans were evaluated to identify the specific reserve or valuation allowance to be allocated to each of these loans. The specific reserve or valuation allowance is

determined as the excess, if any, of the carrying value of the loan over the amount determined using the measurement alternative employed at the measurement date. The carrying value of the loan reflects reductions from prior charge-offs.

For renegotiated loans the present value of expected future cash flows discounted at the loan's effective interest rate was the methodology predominantly employed to measure the amount of impairment at March 31, 2010. Contractual cash flows were adjusted for probability of default, expected prepayments, expected collateral value for loans that will not be fully amortized at maturity and other factors that may impact the timing and amount of expected cash flows. Factors used to adjust contractual cash flows were based on historical experience and market performance statistics where available. At March 31, 2010, the specific reserve or valuation allowance for renegotiated loans was determined to be \$131.6 million.

Table of Contents

For nonperforming loans greater than \$1.0 million the fair value of the collateral less cost to sell was the methodology predominantly employed to measure the amount of impairment at March 31, 2010.

Real estate related loans, especially construction and development real estate loans, were the primary contributors to the elevated levels of nonperforming loans and leases and net charge-offs over the recent nine quarters ended March 31, 2010. Real estate related loans continued to make up the majority of the Corporation's nonperforming loans and leases at March 31, 2010. Historically, the Corporation's loss experience with real estate loans has been relatively low due to the sufficiency of the underlying real estate collateral. In a stressed real estate market, the value of the collateral securing the loans has become one of the most important factors in determining the amount of loss incurred and the appropriate amount of allowance for loan and lease losses to record at the measurement date. The likelihood of losses that are equal to the entire recorded investment for a real estate loan is remote. However, in many cases, rapidly declining and depressed real estate values have resulted in the determination that the estimated value of the collateral was insufficient to cover all of the recorded investment in the loan which has required significant additional charge-offs. Depressed and declining collateral values have significantly contributed to the elevated levels of net charge-offs and the increase in the provision for loan and lease losses that the Corporation experienced over the past two years. Management believes real estate market conditions may be beginning to exhibit some signs of stabilization and improvement.

The Corporation continuously re-assessed, and continues to re-assess the timeliness and propriety of appraisals for collateral dependent loans particularly in volatile real estate markets such as Arizona. The Corporation uses a variety of sources, such as recent sales of loans and sales of OREO, to validate the collateral values used to determine the amount of loss exposure at the measurement date.

At March 31, 2010, the specific reserve or valuation allowance for nonperforming loans greater than \$1.0 million was determined to be \$228.2 million.

At March 31, 2010, a total of \$1,965.8 million of impaired loans and leases were evaluated to identify the specific reserve or valuation allowance to be allocated to each of these loans. A total valuation allowance of \$359.8 million was determined to be required on approximately \$1,413.9 million of impaired loans and no valuation allowance was determined to be required on \$551.9 million of impaired loans. In determining the amount of the valuation allowance at March 31, 2010, the Corporation has taken into consideration that the amount of cumulative net charge-offs recorded on the Corporation's nonperforming loans outstanding at March 31, 2010 was approximately \$827.6 million or 55.6% of the unpaid principal balance of the affected nonperforming loans. These charge-offs have reduced the carrying value of these nonperforming loans and leases which reduced the allowance for loan and lease losses required at the measurement date.

Collective Loan Impairment. This component of the allowance for loan and lease losses is comprised of two elements. First, the Corporation makes a significant number of loans and leases, which due to their underlying similar characteristics, are assessed for loss as homogeneous pools. Included in the homogeneous pools are loans and leases from the retail sector and commercial loans and leases that were excluded from the specific reserve allocation previously discussed.

For purposes of this discussion, the term commercial loans refers to a variety of loan types and includes commercial and industrial loans, commercial real estate loans, commercial construction and development loans and commercial leases. Commercial loans are initially segmented by loan type. The loan types are then stratified by region or business channel. Using the Corporation's internal risk ratings, commercial loans and leases are further stratified between loans and leases with risk ratings that are indicators of a nonperforming loan or lease or potential problem loan or lease, which the Corporation refers to as criticized loans and leases, and loans and leases that indicate no

particular weakness. Using historical loss information, an estimate of loss is determined for each segment. For criticized loans and leases, more recent historical loss information forms the basis to determine the estimates of losses inherent in the pools at the measurement date. For all other loans and leases, longer-term historical loss information is used to form the basis to determine the estimates of losses inherent in the pools at the measurement date. Longer-term historical loss information is expected to be representative of inherent losses over an entire business cycle. Historical loss information is updated quarterly to reflect current experience. Historical loss information may be adjusted for portfolio trends, the effect of loan sales and factors that may be unique to a particular loan or lease type, region or business channel to ensure the loss rates ultimately used are appropriate at the measurement date. Selecting the appropriate loss rates that are used to determine the estimates of losses inherent in the pools at the measurement date requires significant judgment. At March 31, 2010, this component of the allowance for loan and lease losses amounted to \$626.5 million.

Table of Contents

The retail sector consists of residential real estate loans, residential construction and development loans, home equity loans and lines of credit, personal loans and personal leases.

Retail sector loan types are stratified based on origination channels, underwriting guidelines, collateral type and product features such as a loan or line of credit and delinquency status. The loans are further stratified by selected markets (Arizona, Wisconsin, Florida and others), updated credit scores and the loan's year of origination. Loss factors are derived from historical loss experience by delinquency status for each stratum and applied to the outstanding loan and lease balance by delinquency status to determine a reserve. Based on current market conditions, the Corporation estimates additional probable loss by evaluating probability of default and loss severity, the factors that collectively impact the amount of loss inherent in the retail sector loans and leases. Current factors impacting the probability of default such as lingering levels of elevated unemployment may not be fully reflected in updated credit scores or in existing levels of delinquency, causing historical default experience to be understated at the measurement date. Rapidly changing real estate collateral values arising from illiquid markets, excess inventories in certain markets and high current loan-to value ratios resulting from property value depreciation since the date the loans were originated impact historical loss severity. This additional probable loss is added to the amounts determined based on historical experience. At March 31, 2010, this component of the allowance for loan and lease losses amounted to \$528.9 million.

The second element reflects management's recognition of the uncertainty and imprecision underlying the process of estimating losses. From time to time, the Corporation has identified certain loans within certain industry segments that based on financial, payment or collateral performance, warrant closer ongoing monitoring by management. The specific loans mentioned earlier are excluded from this analysis. Based on management's judgment, reserve ranges may be allocated to industry segments due to environmental conditions unique to the measurement period. Consideration is given to both internal and external environmental factors such as economic conditions in certain geographic or industry segments of the portfolio, economic trends, risk profile, and portfolio composition. Reserve ranges are then allocated using estimates of loss exposure that management has identified based on these economic trends or conditions. At March 31, 2010, there was no allowance for loan and lease losses allocated to industry segments due to environmental conditions unique to the measurement period.

The Corporation has not materially changed any aspect of its overall approach in the determination of the allowance for loan and lease losses. However, on an on-going basis the Corporation continues to refine the methods used in determining management's best estimate of the allowance for loan and lease losses.

Based on the loss estimates discussed, management determined its best estimate of the required allowance for loans and leases. Management's evaluation of the factors previously described resulted in an allowance for loan and lease losses of \$1,515.2 million or 3.55% of loans and leases outstanding at March 31, 2010. The allowance for loan and lease losses was \$1,480.5 million or 3.35% of loans and leases outstanding at December 31, 2009 and \$1,352.1 million or 2.75% of loans and leases outstanding at March 31, 2009. Consistent with the credit quality trends noted above, the provision for loan and lease losses amounted to \$458.1 million in the first quarter of 2010 compared to \$477.9 million in the first quarter of 2009. The resulting provisions for loan and lease losses are the amounts required to establish the allowance for loan and lease losses at the required level after considering charge-offs and recoveries. Management recognizes there are significant estimates in the process and the ultimate losses could be significantly different from those currently estimated.

Table of Contents

Income Taxes

Income taxes are accounted for using the asset and liability method. Under this method, deferred tax assets and liabilities are recognized for the future tax consequences attributable to differences between the financial statement carrying amounts of existing assets and liabilities and their respective tax basis. Deferred tax assets and liabilities are measured using enacted tax rates expected to apply to taxable income in the years in which those temporary differences are expected to be recovered or settled. The effect on tax assets and liabilities of a change in tax rates is recognized in the income statement in the period that includes the enactment date.

The determination of current and deferred income taxes is based on complex analyses of many factors, including interpretation of Federal and state income tax laws, the difference between tax and financial reporting basis of assets and liabilities (temporary differences), estimates of amounts currently due or owed, such as the timing of reversals of temporary differences and current accounting standards.

The Federal and state taxing authorities periodically review the Corporation's interpretation of Federal and state income tax laws and make assessments based on their determination of tax laws. Tax liabilities could differ significantly from the estimates and interpretations used in determining the current and deferred income tax liabilities based on the completion of taxing authority examinations. The Corporation establishes tax liabilities or reduces tax assets for uncertain tax positions when, despite its belief that its tax return positions are appropriate and supportable under local tax law, the Corporation believes it may not succeed in realizing the tax benefit of certain positions if challenged. In evaluating a tax position, the Corporation determines whether it is more likely than not that the position will be sustained upon examination, including resolution of any related appeals or litigation processes, based on the technical merits of the position. The Corporation's estimate of the ultimate tax liability contains assumptions based on past experiences, and judgments about potential actions by taxing jurisdictions as well as judgments about the likely outcome of issues that have been raised by taxing jurisdictions. The tax position is measured at the largest amount of benefit that is greater than 50% likely of being realized upon ultimate settlement. The Corporation evaluates these uncertain tax positions each quarter and adjusts the related tax liabilities or assets in light of changing facts and circumstances, such as the progress of a tax audit or the expiration of a statute of limitations. The Corporation believes the estimates and assumptions used to support its evaluation of uncertain tax positions are reasonable.

On an ongoing basis, management evaluates the deferred tax assets to determine if a valuation allowance is required. The determination of whether a valuation allowance is required is based on available positive and negative evidence. Based on its analysis of the evidence, the Corporation determined that no valuation allowance was required to be recorded against the Federal deferred tax assets at March 31, 2010. The Corporation is in a 3-year cumulative loss position as of March 31, 2010. This is considered as a significant piece of negative evidence. The positive evidence for the Corporation is that it forecasts sufficient taxable income during the carryforward period, exclusive of tax planning strategies, even under stressed scenarios. The realization of the deferred tax assets can be subjective and could be significantly reduced in the near term if estimates of future taxable income are significantly lower than currently forecasted.

The Corporation currently does not have any positions for which it is reasonably possible that the total amount of unrecognized tax benefits will significantly increase or decrease within 12 months of March 31, 2010.

Fair Value Measurements

The Corporation measures fair value in accordance with the Fair Value Measurements and Disclosures Topic of the Codification, which provides a framework for measuring fair value under accounting principles generally accepted in the United States of America. The topic defines fair value as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. The topic also addresses the valuation techniques used to measure fair value. These valuation techniques include the market approach, income approach and cost approach. The market approach uses prices or relevant information generated by market transactions that are identical to or comparable with assets or liabilities being valued. The income approach involves converting future amounts based on current market expectations about those future amounts to a single present amount. The cost approach is based on the amount that currently would be required to replace the service capacity of an asset.

Table of Contents

The Fair Value Measurements and Disclosures Topic of the Codification establishes a fair value hierarchy, which prioritizes the inputs to valuation techniques used to measure fair value into three broad levels. The fair value hierarchy gives the highest priority to quoted prices in active markets for identical assets or liabilities (Level 1) and the lowest priority to unobservable inputs (Level 3). The reported fair value of a financial instrument is categorized within the fair value hierarchy based upon the lowest level of input that is significant to the instrument's fair value measurement. The three levels within the fair value hierarchy consist of the following:

Level 1 - Inputs to the valuation methodology are quoted prices (unadjusted) for identical assets or liabilities in active markets.

Level 2 - Inputs to the valuation methodology include quoted prices for similar assets and liabilities in active markets and inputs that are observable for the asset or liability, either directly or indirectly, for substantially the full term of the financial instrument. Fair values for these instruments are estimated using pricing models, quoted prices of financial assets or liabilities with similar characteristics or discounted cash flows.

Level 3- Inputs to the valuation methodology are unobservable and significant to the fair value measurement. Fair values are initially valued based upon a transaction price and are adjusted to reflect exit values as evidenced by financing and sale transactions with third parties.

A description of the valuation methodologies used for financial instruments measured at fair value on a recurring basis, as well as the general classification of such instruments pursuant to the valuation hierarchy is disclosed in Note 3 – Fair Value Measurements in the Notes to Financial Statements.

In addition to financial instruments that are measured at fair value on a recurring basis, fair values are used in purchase price allocations and goodwill impairment testing.

Measurements other than Level 1 involve various valuation techniques and models, which seek to maximize inputs that are observable, when available. Selecting the relevant inputs, appropriate valuation techniques and the appropriate category to report the fair value of a financial instrument requires varying levels of judgment depending on the facts and circumstances. The determination of some fair values can be a complex analysis of many factors. Judgment is required when determining the fair value of an asset or liability when either relevant observable inputs do not exist or available observable inputs are in a market that is not active. When relevant observable inputs are not available, the Corporation must use its own assumptions about future cash flows and appropriately risk-adjusted discount rates. Conversely, in some cases observable inputs may require significant adjustments. For example, in cases where the volume and level of trading activity in an asset or liability have declined significantly, the available prices vary significantly over time or among market participants, or the prices are not current, the observable inputs might not be relevant and could require significant adjustment.

Valuation techniques and models used to measure the fair value of financial assets on a recurring basis are reviewed and validated by the Corporation at least quarterly and in some cases monthly. In addition, the Corporation monitors the fair values of significant assets and liabilities using a variety of methods including the evaluation of pricing service information, using exception reports based on analytical criteria, comparisons to previous trades or broker quotes and overall reviews and assessments for reasonableness.

Goodwill Impairment Tests

Goodwill is tested for impairment using a two-step process that begins with an estimation of the fair value of a reporting unit. A reporting unit is an operating segment, or one level below an operating segment, as defined by the

Segment Reporting Topic of the Codification. This first step is a screen for potential impairment. The second step, if necessary, measures the amount of impairment, if any. Goodwill is reviewed for impairment annually as of June 30th or more frequently if indicators of impairment exist. Goodwill has been assigned to six reporting units for purposes of impairment testing.

Significant judgment is applied when goodwill is assessed for impairment. The judgment includes developing cash flow projections, selecting appropriate discount rates, identifying relevant market comparables, incorporating general economic and market conditions and selecting an appropriate control premium. The assumptions used in the goodwill impairment assessment and the application of these estimates and assumptions are discussed below.

Table of Contents

The estimated fair value for the Commercial Banking segment, Community Banking segment, Private Banking reporting unit and Trust reporting unit at June 30, 2009 was determined by equally weighting an income approach (50%) and market approach (50%) to assess if potential goodwill impairment existed. For the Capital Markets reporting unit, National Consumer Banking reporting unit and the Brokerage reporting unit the estimated fair value at June 30, 2009 was determined by weighting 100% to an income approach. The Corporation determined that there was not sufficient comparable metrics associated with guideline companies and those reporting units to place any reliance on the market approach.

The income approach is based on discounted cash flows which are derived from internal forecasts and economic expectations for each respective reporting unit. The key assumptions used to determine fair value under the income approach included the cash flow period, terminal values based on a terminal growth rate and the discount rate. The discount rate represents the estimated cost of equity, was derived using a capital asset pricing model that uses a risk-free rate (20-year Treasury Bonds) which was 4.3% at June 30, 2009. The risk-free rate was adjusted for the risks associated with the operations of the reporting units. The discount rates used in the income approach for the six reporting units evaluated at June 30, 2009 ranged from 10% to 22%. An increase to the discount rate of 1% would have lowered the fair value determined under the income approach for the six reporting units evaluated at June 30, 2009 by a range of \$3.3 million to \$83.5 million or 6.3% to 47.0%.

The market approach is a technique that provides indications of value based upon comparisons of the reporting unit to market values and pricing evidence of public companies in the same or similar lines of businesses. Market ratios (pricing multiples) and performance fundamentals relating to the public companies' stock prices (equity) as of June 30, 2009 were applied to each reporting unit as previously discussed to determine indications of its fair value.

The aggregate fair values were compared to the Corporation's market capitalization as an assessment of the appropriateness of the fair value measurements. The Corporation used the average stock price for the month of June 2009. The comparison between the aggregate fair values and market capitalization indicated an implied premium. A control premium analysis indicated that the implied premium was within a range of the overall premiums observed in the market place.

As a result of applying the first step of goodwill impairment testing to determine if potential goodwill impairment existed at June 30, 2009, Trust, Private Banking, and Brokerage, the three reporting units that comprise the Wealth Management segment, and the Capital Markets reporting unit "passed" (fair value exceeded the carrying amount) the first step of the goodwill impairment test. The Commercial Banking segment and the National Consumer Banking reporting unit "failed" (the carrying amount exceeded the fair value) the first step of the goodwill impairment test at June 30, 2009 and were subjected to the second step of the goodwill impairment test.

For the four reporting units that passed step one, fair value exceeded the carrying amount by 7% to 166% of their respected estimated fair values. For the two reporting units that failed, the carrying amount exceeded fair value by between 37% and 90%.

The second step of the goodwill impairment test compares the implied fair value of the reporting unit goodwill with the carrying amount of that goodwill. The implied fair value of goodwill is determined in the same manner as the amount of goodwill recognized in a business combination is determined. The fair value of a reporting unit is allocated to all of the assets and liabilities of that unit (including any unrecognized intangible assets) as if the reporting unit had been acquired in a business combination and the fair value of the reporting unit was the price paid to acquire the reporting unit. The fair value allocated to all of the assets and liabilities of that unit (including any unrecognized intangible assets) also requires significant judgment, especially for those assets and liabilities that are not measured on a recurring basis such as certain types of loans. The excess of the fair value of the reporting unit over the amounts

assigned to its assets and liabilities is the implied fair value of goodwill. The Corporation believes the implied fair value of goodwill is significantly affected by unobservable inputs and would be categorized as Level 3 within the fair value hierarchy.

The Corporation completed the second step of the process in order to determine if there is any goodwill impairment for the two reporting units that failed step one of the goodwill impairment tests. In addition, the Corporation performed the second step of the process for one reporting unit that marginally passed step one of the goodwill impairment test.

Table of Contents

The implied fair value of a reporting unit's goodwill will generally increase if the fair value of its loans and leases are less than the carrying value of the reporting unit's loans and leases. The fair value of loans and leases was derived from discounted cash flow analysis.

The stress and deterioration in the national real estate markets, liquidity stress and current economic conditions have depressed prices buyers and sellers are paying and receiving for bank-related assets, especially loans and leases. The Corporation's allocation of the fair values to the assets and liabilities assigned to the individual reporting units was less than their reported carrying values. As a result, the Corporation was not required to recognize any goodwill impairment upon completion of the second step of the goodwill impairment test. There have been no events since the annual test to indicate that it is more likely than not that the recorded goodwill had become impaired.

Due to the current economic environment and the uncertainties regarding the impact on the Corporation's reporting units, there can be no assurances that the Corporation's estimates and assumptions regarding the duration of the economic recession, or the period or strength of recovery, made for purposes of the Corporation's annual goodwill impairment test will prove to be accurate predictions of the future. If the Corporation's assumptions regarding forecasted revenues or margin growth rates of certain reporting units are not achieved, the Corporation may be required to record additional goodwill impairment losses in future periods. It is not possible at this time to determine if any such future impairment loss would result or, if it does, whether such charge would be material.

New Accounting Pronouncements

A discussion of new accounting pronouncements that are applicable to the Corporation and have been or will be adopted by the Corporation is included in Note 2 in Notes to Financial Statements contained in Item 1 herein.

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

The following updated information should be read in conjunction with the Corporation's Annual Report on Form 10-K for the year ended December 31, 2009. Updated information regarding the Corporation's use of derivative financial instruments is contained in Note 11 – Derivative Financial Instruments and Hedging Activities in Notes to Financial Statements contained in Item 1 herein.

Market risk arises from exposure to changes in interest rates, exchange rates, commodity prices, and other relevant market rate or price risk. The Corporation faces market risk through trading and other than trading activities. While market risk that arises from trading activities, in the form of foreign exchange and interest rate risk, is immaterial to the Corporation, market risk from other than trading activities, in the form of interest rate risk, is measured and managed through a number of methods.

Interest Rate Risk

The Corporation uses financial modeling techniques to identify potential changes in income and market value under a variety of possible interest rate scenarios. Financial institutions, by their nature, bear interest rate and liquidity risk as a necessary part of the business of managing financial assets and liabilities. The Corporation has designed strategies to limit these risks within prudent parameters and identify appropriate risk/reward tradeoffs in the financial structure of the balance sheet.

The financial models identify the specific cash flows, repricing timing and embedded option characteristics of the assets and liabilities held by the Corporation. The net change in net interest income in different market rate environments is the amount of earnings at risk. The net change in the present value of the asset and liability cash flows in different market rate environments is the amount of market value at risk. Policies are in place to assure that neither earnings nor market value at risk exceed appropriate limits. The use of a limited array of derivative financial instruments has allowed the Corporation to achieve the desired balance sheet repricing structure while simultaneously meeting the desired objectives of both its borrowing and depositing customers.

The models used include measures of the expected repricing characteristics of administered rate (NOW, savings and money market accounts) and non-rate related products (demand deposit accounts, other assets and other liabilities). These measures recognize the relative insensitivity of these accounts to changes in market interest rates, as demonstrated through current and historical experiences. In addition to contractual payment information for most other assets and liabilities, the models also include estimates of expected prepayment characteristics for those items that are likely to materially change their cash flows in different rate environments, including residential mortgage products, certain commercial and commercial real estate loans and certain mortgage-related securities. Estimates for these sensitivities are based on industry assessments and are substantially driven by the differential between the contractual coupon of the item and current market rates for similar products.

This information is incorporated into a model that projects future net interest income levels in several different interest rate environments. Earnings at risk are calculated by modeling net interest income in an environment where rates remain constant, and comparing this result to net interest income in a different rate environment, and then expressing this difference as a percentage of net interest income for the succeeding 12 months. This calculation is a change from prior years. Previously, earnings at risk were measured as a percentage of the Corporation's budgeted operating income before taxes for the calendar year. This change was made to decrease the volatility of the measurement caused by items unrelated to the margin. Since future interest rate moves are difficult to predict, the following table presents two potential scenarios—a gradual increase of 100bp across the entire yield curve over the course of the year (+25bp per quarter), and a gradual decrease of 100bp across the entire yield curve over the course of the year (-25bp per quarter)

for the balance sheet as of March 31, 2010:

Hypothetical Change in Interest Rates	Annual Impact
100 basis point gradual rise in rates	(0.1) %
100 basis point gradual decline in rates	(2.4) %

Table of Contents

These results are based solely on the modeled parallel changes in market rates, and do not reflect the earnings sensitivity that may arise from other factors such as changes in the shape of the yield curve and changes in spread between key market rates. These results also do not include any management action to mitigate potential income variances within the simulation process. Such action could potentially include, but would not be limited to, adjustments to the repricing characteristics of any on- or off-balance sheet item with regard to short-term rate projections and current market value assessments.

Actual results will differ from simulated results due to the timing, magnitude, and frequency of interest rate changes as well as changes in market conditions and management strategies.

Equity Risk

In addition to interest rate risk, the Corporation incurs market risk in the form of equity risk. The Corporation invests directly and indirectly through investment funds, in private medium-sized companies to help establish new businesses or recapitalize existing ones. These investments expose the Corporation to the change in equity values for the portfolio companies. However, fair values are difficult to determine until an actual sale or liquidation transaction actually occurs. At March 31, 2010, the carrying value of total private equity investments amounted to approximately \$70.7 million.

At March 31, 2010, Wealth Management administered \$124.6 billion in assets and directly managed \$32.7 billion in assets. Exposure exists to changes in equity values due to the fact that fee income is partially based on equity balances. Quantification of this exposure is difficult due to the number of other variables affecting fee income. Interest rate changes can also have an effect on fee income for the above-stated reasons.

ITEM 4. CONTROLS AND PROCEDURES

The Corporation maintains a set of disclosure controls and procedures that are designed to ensure that information required to be disclosed by it in the reports filed by it under the Securities Exchange Act of 1934, as amended (the “Exchange Act”), are recorded, processed, summarized and reported within the time periods specified in the SEC’s rules and forms, and to ensure that information required to be disclosed by the Corporation in such reports is accumulated and communicated to the Corporation’s Chief Executive Officer and Chief Financial Officer, as appropriate, to allow timely decisions regarding required disclosure. The Corporation carried out an evaluation, under the supervision and with the participation of its management, including its President and Chief Executive Officer and its Senior Vice President and Chief Financial Officer, of the effectiveness of the design and operation of its disclosure controls and procedures pursuant to Rule 13a-15 of the Exchange Act. Based on that evaluation, the President and Chief Executive Officer and the Senior Vice President and Chief Financial Officer concluded that the Corporation’s disclosure controls and procedures are effective as of the end of the period covered by this report for the purposes for which they are designed.

There have been no changes in the Corporation’s internal control over financial reporting identified in connection with the evaluation discussed above that occurred during the Corporation’s last fiscal quarter that have materially affected, or are reasonably likely to materially affect the Corporation’s internal control over financial reporting.

PART II - OTHER INFORMATION

ITEM 2. UNREGISTERED SALES OF EQUITY SECURITIES AND USE OF PROCEEDS.

The following table reflects the purchases of Marshall & Ilsley Corporation stock for the specified period:

	Total Number of Shares Purchased (1)	Average Price Paid per Share	Total Number of Shares Purchased as Part of Publicly Announced Plans or Programs	Maximum Number of Shares that May Yet Be Purchased Under the Plans or Programs
January 1 to January 31, 2010	6,824	\$ 5.85	N/A	N/A
February 1 to February 28, 2010	9,606	5.72	N/A	N/A
March 1 to March 31, 2010	11,416	6.90	N/A	N/A
Total	27,846	\$ 6.23	N/A	

(1) Includes shares purchased by rabbi trusts pursuant to nonqualified deferred compensation plans.

In connection with the Corporation's participation in the Capital Purchase Program ("CPP"), the consent of the United States Treasury will be required for the Corporation to repurchase its common stock other than in connection with benefit plans consistent with past practice and certain other specified circumstances. See Item 2, Management's Discussion and Analysis of Financial Condition and Results of Operations—Liquidity and Capital Resources in this Quarterly Report on Form 10-Q for additional information regarding the CPP.

The Corporation's Share Repurchase Program expired and was not reconfirmed in April 2009.
